A. G. SPALDING & BROS'.

TRADE-MARKED

Line of Athletic Goods

THE DEALER that is clever enough to look out for his own interests will be the one that will order Spalding's trade-marked line of implements and nothing else. For over a quarter of a century the Spalding trade mark has been the standard in the athletic goods industry, and the trade mark on the implement is a guarantee that the article is official and correct and in use by the champions throughout the world where athletic sports are indulged in.

BOXING GLOVES.

The largest and most complete line of Boxing Gloves in the world to select from. The Spalding Championship Gloves, endorsed by all the champions and used by them. Three styles at $6 each. The Spalding Special, at $4 each. The Spalding Gloves with the new patent palm lacing and patent palm grip is an improvement that has made the Spalding Gloves the sellers this season. Fourteen different styles and no dealer can be up to date with this line unless he has a catalogue before him. Prices are fixed and final.

STRIKING BAG.

The Spalding Championship Bag, originally designed by "Kid" McCoy, is the one that is used by the experts and the professional men. Price, $7. Nine other Swinging Bags for the dealer to select from. Spalding's Double-end Bag, the Fitzsimmons' Special, is the best in this line at $5. Seven others as low as $1.

ICE SKATES.

Complete line of Peck & Snyder's American Club Skates, for over thirty years the leading Skate in America. It is copied by many, but never equalled.

Spalding's line of Hockey goods is admitted by the players to be the most perfect line on the market. This not only applies to the stick and puck, but also to sundries that are required by hockey players. The Spalding "Shamrock" Hockey Stick requires no introduction to Canadians. Endorsed and used by the Shamrocks of Montreal, and the champions of the world, the Victoria team.

The Spalding official trade-marked Puck is the official Puck of the Canadian Amateur Hockey League.

Now is the time for the dealer to think of next season's business. The wise dealer will be the one that carries the Spalding complete line of baseball goods. Spalding in baseball is synonym for perfection, and wherever baseball is played, in order to have the game officially played, Spalding's goods must be used. For a quarter of a century Spalding has held the field in the baseball line.

Lawn Tennis last year was the best in many years in the tennis line; 1903 promises to be better. Spalding's line of Lawn Tennis goods is unequalled.

Then there is Spalding's official Basketball, the one that must be used in all games, as well as the official goal posts and goals.

The Spalding Intercollegiate Football, No. J55. This is the ball that is used by Yale, Princeton, Harvard, Pennsylvania, Cornell, Chicago, University of California. Every team that plays football in America uses this ball.

GOLF GOODS.

The largest and most complete line in the world, and made by the most expert golfers in the world. Everything in the golf line is up-to-date.

The dealer that wants to have his store up to date will be the one that carries a complete line of Spalding's Athletic Library—the American authority on all matters athletic. Each book complete in itself, and wherever displayed find ready buyers. If you have not a copy of Spalding's Athletic Catalogue before you, send us a postal card and we will send you one.

A BUSINESS MAN FOR MAYOR.

IT is to be hoped the business men of Toronto will do all in their power to secure the election of Ald. Daniel Lamb as Mayor.

Out of the four men in the field who can be seriously taken as candidates, Mr. Lamb is the only business man. The others are lawyers.

As a business man Mr. Lamb was a success. The fact that he amassed a substantial fortune and years ago retired from active commercial life is proof of this.

But Ald. Lamb's business experience is not his only qualification. He has also had many years of municipal experience; and there is probably no one in the "Queen City" to-day who is better informed on municipal affairs than he is. His honesty and integrity no one has ever called in question, while the office for which he is now a candidate is seeking him, and not he the office.

One of the crying needs of Toronto is the quality of business in the administration of its civic affairs. It naturally follows that if a man with large experience in both commercial and municipal life is placed in the civic chair an important step has been taken toward strengthening the city in that in which it is now so lamentably weak.

All experiments are not successful; but had there been no experiments there would have been no great commercial enterprises.

ADVANCE IN GLASSWARE.

The prices of hollow table glassware were advanced, on January 1, 15 per cent., and of lamp chimneys, 10 per cent. at the same date.

The manufacturers of glassware in the United States have been putting up prices and the Canadian manufacturers are following in their steps.

It is claimed that the cost of production is greater now than six months ago. The scarcity and high price of soft coal has increased the cost of manufacturing the article, and also, in some instances, higher wages have to be paid the workmen.

As long as the coal market continues high, these advances will be sustained, and it should decline, the price of glassware will likely follow.

WHO SHOULD SELL BICYCLE ACCESSORIES?

MANUFACTURERS of bicycle sundries in the United States are reporting the great and steady improvement in the bicycle and sundry business, and the outlook for the season of 1903 is very encouraging.

Judging from the number of inquiries for catalogues and price lists they are daily receiving from hardwaremen, it really looks as if the business was now on a good staple basis and the merchant is beginning to realize the fact.

The day is past when wheeling as a fad placed the handling of bicycles in the hands of irresponsible men; and, further, the few changes that have been made in the construction of the bicycle the past few years render it easy for the merchant to carry an assorted line of sundries and parts that will prove not only good sellers, but return good profits, and this fact the hardwaremen should not lose sight of.

In an interview with the largest bicycle manufacturing firm of Canada, the above facts were fully substantiated, and they are more than pleased with the number of inquiries they are receiving from hardwaremen both in Ontario and the Eastern Provinces.

In England their business is now almost exclusively handled by hardwaremen, or ironmongers, as they are called there. This all goes to prove that in looking for a staple article like bicycle accessories, people will look in a staple place for them and that place is the hardware stores.

DECLINE IN SPADES AND SHOVELS.

THERE has been made a reduction in the prices of spades and shovels in Canada, to meet competition from the United States and Great Britain. The new discount is 45 per cent. instead of 40 and 5 per cent. as before, and the list has been reduced $3 per doz. on Old's goods, $2 on Gray's, and $1 on Burns'. With the above big reduction in the list, as well as the increased discount, a large reduction is made in the net prices. For example, Old's, which netted the trade last year about $8.30 per dozen, under the present prices will net $6.35, a difference of nearly $2 per dozen. This change being made only to meet competition from small makers in the United States and England the home manufacturers of course claim they have to satisfy the retail merchants as well as the consumers. Should conditions change in England and the United States, where cut-throat competition at present exists, the Canadian manufacturers claim they will have sufficient reason in fair play to take advantage of it.

The cost of handles and of steel is to-day higher than it was last year and labor is better paid. It therefore looks as if the manufacturers' lot in spades and shovels is not a happy one at the present prices. We quote below the new list:

Mrs. P. M. Cauchon, general merchant, St. Romuald, Que., is offering to compromise at 40c. on the dollar.

INDUSTRIAL GOSSIP

WATSON & TODD, Liverpool, Eng., have contracted for all lumber cut by McLachlin Bros., of Arnprior, Ont., during 1903, an aggregate of fully 40,000,000 feet.

Skilled mechanics and laborers are in great demand in the Sault Ste. Marie, Ont., district.

Wilber Gordon, hardware merchant, of Tweed, Ont., has purchased the foundry owned and operated by A. H. Leal & Son, and will in future manage it under the name of Leal Manufacturing Company.

MOVING TO ORILLIA, ONT.

The Dominion Wrought Iron Wheel Co., Brock avenue, Toronto, have been offered inducements to remove to Orillia, Ont., and will do so about March 1. Orillia people have taken interest in the company, the capital stock of which has been increased to $50,000. Mr. J. B. Tudhope, M.P., Mayor of Orillia, has been made president of the company, and Mr. Jas. E. Knox, of Toronto, is vice-president. Mr. T. H. Knox, who has been connected with R. G. Dun & Co. for the past 23 years, has been appointed general manager, and the other directors are Mr. Wm. Tudhope, Orillia, and Mr. W. Alex. McKay, of Montreal. The company manufacture wagons with a new patent wide tire.

WILL HE COME TO CANADA?

Mr. W. Sandford, of Lithgow, has been practically invited to transfer his iron working schemes to Canada, where he is assured of a better opportunity than the Commonwealth seems able to give him. From the secretary of the Voters' League at Victoria, British Columbia, he has received a letter sympathizing with him for the "damper which has been put upon his great enterprise in Australia," and assuring him that British Columbia is a finer field for carrying it to practical effect. Raw materials of the finest quality are abundant and accessible. The opportunities for Oriental trade are as good there as in Australia, and, in addition, there is the Dominion bonus, which the writer feels sure would be augumented by the Province if this was warranted. Accompanying the letter is a report on the iron and steel resources of the Province.—Australasian Hardware and Machinery.

THEIR PLANS HAVE CHANGED.

An echo of Mr. Clergue's statements regarding the condition of the steel rail manufacturing business in Canada comes from the decision of The Dominion Iron and Steel Company not to continue the erection of their steel-rail mills at Sydney, C.B., for the present, but to use them for manufacturing structural steel, for which the demand is very good in Canada.

Had this been done some time ago the company would likely have done a very good business, as the demand for structural materials has been very good for some months. Not being in such unfair competition with German manufacturers as would be the case if rails were manufactured, there would also be much more profit to the company in structutal steel.

It is curious that the machinery to be employed in the manufacture of structural steel will be brought by The Dominion Iron and Steel Company from Germany. It is thought that manufacturing operations will commence about May 1.

CAR-WHEEL WORKS FOR MONTREAL.

Montreal is certainly going ahead with great rapidity in regard to manufacturing industries, the latest being the rebuilding of the car wheel works at Lachine, which, it will be remembered, were burned out some years ago.

The fire put a stop to the manufacture of wheels by The Montreal Car-Wheel Company, but by next spring the factory will once more be in operation.

The company will operate on the old premises, near The Dominion Bridge Company's works. They will employ about 100 men, and their capacity will be in the neighborhood of 30 tons per day.

All indications point to a most prosperous period during the next five years for the iron and steel manufacturers of Canada. It is expected that, aside from the Grand Trunk's trans-continental line, the railway building in Canada will exceed anything in the past.

The fact that there is not a railway operating in Canada to-day that has sufficient rolling stock to meet the increasing traffic, is another point in favor of the rebuilding of these works.

ORDERS FOR FREIGHT CARS.

Hon. A. G. Blair has given an order for box and freight cars, aggregating $400,000 in amount, to be divided between Rhodes, Currie & Co., of Amherst, N.S., and The Rathbun Co., of Deseronto, Ont. Nearly 500 of these cars are required for the Intercolonial, and they must be completed early in the spring. The Minister of Railways will consult his colleagues with respect to the purchase of additional Pullmans and dining cars for the Government line. So heavy was the tourist traffic last year that the company could have put into use many more of these classes of cars than it possesses. The earning power of the Intercolonial has greatly increased since Mr. Blair commenced to improve and equip it on a modern basis. Taking the period from July, 1898, to November, 1902, each successive month has shown an increase over the corresponding period of the previous year ranging from $40,000 to $70,000. Taking the section of railway from Halifax, N.S., to Moncton, N.B., over which both the C.P.R. and Intercolonial run, there was a time when 85 per cent. of the business originating between these points went to the C.P.R. via St. John, and only 15 per cent. to the Intercolonial. Now the condition of things is reversed, and the people's line gets the lion's share.

ANNUAL BALL OF WESTERN TRAVELLERS.

From our own Correspondent.

THE commercial travellers' ball at the Alhambra Hall, Winnipeg, on Monday night was the best yet given by that Association. Everyone went in for a good time, and had it. The room looked most inviting, with decorations, flags and bunting and a profusion of colored electric globes. The stage was fitted up as a cosy sitting-room, and with a screen of palms made a delightful spot from which to view the dancers. The scene was an exceedingly pretty one.

Men were in the majority, and although there were no doubt a sufficient number of chaperones, there were no wall flowers in sight.

The floor was in splendid condition, and the music all that could be desired.

There were any number of pretty gowns and pretty faces to go with them. Among so many frocks it was pretty hard to individualize. Those noted were: Mrs. Fred Cox, cream satin with chiffon frills and berthe of rare lace; Mrs. J. Lamb, black silk with point lace revers; Mrs. E. L. Thomas, black grenadine with scarlet rosettes; Mrs C. C. Macdonald, black chiffon with spray poppies on corsage; Miss Callahan, gown of blue China silk and yolk and sleeves of chiffon embroidered with silver sequins; Mrs. Arthur Congdon, silk organdie in Persian effect with sash and corsage knots and cerise satin ribbon; Miss Young, gown of cream louisine with yolk of embroidered chiffon and pearl ornaments; Miss Winearis, pink chiffon over pink taffeta; Miss Landers, cream China silk with trimmings, silk applique; Mrs. A. Dyke, handsome gown of black taffeta with sequin trimmings; Miss McSweeney, sea green crepoline over green taffeta; Miss Martin, point desprit over bluette slip; Mrs. Harry Cox, sage green silk with panels of cream applique and berthe of green chiffon; Mrs. J. W. Lord, black silk relieved by a berthe of Brussels lace and touches of burnt orange.

There was a preponderence of light-colored gowns, and, as the majority of them were long, the effect of them when dancing was that of floating drapery, and was certainly very pretty.

Supper was served after the ninth dance. Numerous small gaily decorated tables were set in the dining-hall on the second floor, the repast being served in Mrs. Hamill's best style. As only half the dancers went down at one time there was ample room.

The committee, to whose untiring labors the splendid success of the ball was due, was composed of R. M. McGowan (the newly elected President of the N.W.C.T.A.), H. S. Rolston (Hon Sec'y.), E. W. Lowe, J. M. Lamb, F. M. Morgan, J. Heasley, W. C. McLean, E. L. Thomas, N. Musgrave, W. L. Lawler, J. A. McTaggert, C. C. Macdonald, F. W. Drewry, and J. Haffner.

BANQUET OF THE THOS. DAVIDSON MFG. CO., LIMITED.

THE sixth annual banquet and reunion of the travellers and heads of departments of the above firm was held Tuesday evening, December 23, at La Corona Hotel, Montreal. The president, Jas. Davidson, acted as chairman, and in a few well-chosen words proposed the health of "The King," which was received with musical honors. The health of "The Queen and Royal Family" was also duly honored.

The toast of "The Heads of Departments" was proposed by T. C. Davidson, vice-president, in a humorous speech, and was replied to by Owen Gee, whose remarks were of a reminiscent character he having been with the firm since 1869.

Edward Goodwill, manager of the sales department, proposed the toast of "Our Travellers," and, as he had toured Canada from the Atlantic to the Pacific, he spoke with a full knowledge of his subject, and his interesting remarks received the closest attention, which they so well merited.

H. B. Chadburn was the first to reply to this toast, and dwelt upon the loyalty of the travelling staff to the interests of the firm.

W. H. Morgan followed, and his remarks had the ring of true patriotism. He hoped that the label "Made in Canada" would always be insisted upon by buyers in Canada, and prophesied that 1903 would be the greatest year in the history of his firm.

R. B. Gray, J. A. Crevier, L. B. Latour and J. N. Young also spoke along similar lines.

The toast of "Canada" was eloquently p oposed by Mr. Lachapelle, dwelling on the prosperity of Canada in general and the Thos. Davidson Manufacturing Co. in particular.

James Chalmers, the artist who so successfully designed the invitation cards and menus (which were lithographed on tin in many colors), referred to the Maple Leaf as the emblem of Canada, and recited the following original poem in connection therewith :

"THE MAPLE LEAF."

While sitting at this festive board
And scanning all your faces,
A pleasant thought occured to me
Regarding different races.
Just fancy that we are the crew
Of the good ship "Maple Leaf"
That each one of us to-night's a jolly tar,
One more year we've been afloat
On our staunch and sturdy boat
And to-night she safely crossed the harbor bar.

And John Bull is Captain,
Batisse she is de mate—
Pat, from Erin's Isle, is engineer,
Sandy frae the land o' cakes,
Chief Purser is the cash he takes,
While Davy Jones, from Wales, the ship does steer,
Though of different creeds and races,
Born in various climes and places,
England, Ireland, Scotland, France and Wales,
While Johnny Bull is chief
Of the good ship "Maple Leaf"
The world will find that harmony prevails.

But, while to-night in harbor
Of the "Maple Leaf" we sing,
There are other noble emblems
Which to our hearts do cling,—
Let us ne'er forget them
When sailing o'er the foam.
I mean the little emblem
Of "Home Sweet Home."

So here's to the Shamrock, the Thistle, the Rose,
The Leek and the Fleur de Lis—
Dear little emblems of our native lands
Far away over the sea.
We're sailing together
In all kinds of weather,
Still, our voyage through life is but brief
So we'll pray—God bless them—
To our hearts we will press them
Along with the Maple Leaf.

JAY. SEE.

At the conclusion of the recitation all joined heartily in singing "The Maple Leaf for Ever."

Frank J. Barratt, in a neat speech, proposed the health of "The Ladies," which was replied to by E. Huot.

P. Dechene moved a hearty vote of thanks to Jas. Williams, the superintendent of the factory, to whose indefatigable energy the success of the banquet was due. This vote was carried with great applause.

J. N. Warminton then made a few remarks relative to the wonderful growth of the lithographing department, and proposed the health of Mr. Bodfish and his staff.

Mr. Bodfish, who has charge of this department, made a brief reply, stating that his old quarters having become too small for the volume of trade done in that line, he had been provided with new and improved facilities, being now located on the top floor of a building recently erected. The artists will now have the advantage of a well-lighted studio—the light being admitted through a sky-light as well as by an abundance of windows. The lithographing department have the use of the whole flat, which will double their former floor space, and will enable them to materially increase their output during the coming year.

J. N. Young, R. W. Leith, R. B. Gray, Wm. Jones and others, also spoke on matters of interest to those present.

During the evening songs and recitations were contributed by Dr. A. W. Haldimand, W. Falconbridge, W. E. Barrat, C. P. Clarke, C. Cartledge, J. A. Crevier, A. Owen Gee, J. Stump and Mr. Lachapelle. Dr. Haldimand's rich tenor voice was heard to good advantage, and he was repeatedly encored. C. P. Clarke's recitations were masterpieces of elocution, his rendering of Drummond's poems leaving nothing to be desired. The enjoyment of the evening was also enhanced by the presence of an efficient orchestra.

DUTIES ON IRON AND STEEL.

A meeting of the sub-committee of the Canadian Manufacturers' Association, appointed to report on the proposed revision of iron and steel duties, was held in the Board of Trade Building, Toronto, a few days ago. Frederic Nichols occupied the chair. There was an attendance of about 30 manufacturers from Ontario and Quebec. It is understood that this will be the final meeting of the sub-committee to deal with the question of raw material, that subject having been disposed of, and the various views of the manufacturers reconciled.

The sub-committee will now take up the question of the manufactured product, and when an agreement is reached on that a report will be made to the general committee. It is not expected that the latter body will be in a position to report upon the general question of the tariff till some time in February.

NEW MANUFACTURERS' AGENCY.

Archie MacFarlane, who for the past 15 years has occupied a position of trust with Caverhill, Learmont & Co., commenced in business for himself at the first of the year as a manufacturers' agent. He has secured several first-class agencies, particulars of which will be published later.

In common with a great many others, who had met him in a business way in his former place, we bespeak for Mr. MacFarlane the good will of all connected with the trade, and with him a prosperous career. He is a young man of energy and ability, and he hopes, by confining his business entirely to the wholesale trade, to build up a large and valuable connection.

His long association with Caverhill, Learmont & Co. will prove of the greatest value to him in his new venture, and he is thoroughly posted in all the details of the hardware business.

SPECIALTIES IN BRASS GOODS

THE Waterbury Brass Co., Waterbury, Conn., and New York City, have made a specialty for years of drawing and spinning brass and also wide brass, but with their new equipment are able to carry in stock in New York brass up to 24 in. wide, and they purpose installing a stock of drawing brass in standard widths and gauges for the convenience of the trade and also spinning brass from 4 to 24 in. wide. Their stock will run as follows: From 4 to 14 in. wide, they will carry 16 B & S gauge to and including 36 B & S; 16 in. wide, from 18 B & S to 32 B & S; 18 in. wide, from 18 B & S to 28 B & S; 20, 22 and 24 in. wide, from 18 B & S to 26 B & S. This is a large and complete assortment of drawing and spinning brass and will be there for shipment and delivery immediately on receipt of order, and will give the users of this class of material a stock to draw against. They will also instal a stock of spinning copper in rolls from 12 to 20 in. wide in various thicknesses in B & S gauge.

There has been such a demand among the hardware trade and manufacturers of special hardware that they will instal a stock of sheet brass and sheet bronze in flat sheets in widths from 6 to 14 in. wide in random lengths about 6 ft. long to meet the demand for finger and kicke plates, and will carry this in quite a large variety of thicknesses in B. & S. gauge. They have increased their stock of brass rods materially and are now carrying free turning brass rods from ⅛ to 1 in. by 32nds and up to 2½ in. in diameter by 16ths from 1 in. Their stock in hexagon rods is quite complete for free turning or drilling rod; they are all straight and true to size. They are having a large trade in their Pope's Island white metal which is non-corrosive and there is a permanency of color that meets the demand for purposes in covering sink boards, for pantries and bar fixtures and for passenger coaches and lavatories. The metal is very ductile. Their stock of sheet copper, both cold rolled and soft will be somewhat increased as to other sizes that the demand calls for, and also what they have said in regard to other material may apply to their soldering coppers. They carry seamless brass chisel handle ferrules, sheet brass grommets, screwdriver handle ferrules and eyelets and also brass checks in stock here.

FEAST THEIR STAFF.

H. S. Howland, Sons & Co., Toronto, entertain to-day (Saturday, January 3), their travelling staff and their heads of departments, to dinner at the National Club, Toronto. The best of good feeling exists between this firm and its members and has much increased during the past year. Harmony prevails amongst all its members.

A Varnish Announcement.

We have organized a regular varnish department to push more rapidly than ever our varnish sales.

We purpose to co-operate more fully with our dealers in going after varnish business. We are in a position to give them any and every special help to increase their varnish sales.

We are putting the same progressive advertising spirit into the sale of our varnish that has proved so successful in our paint.

Our plans for the year are the most complete and effective we can devise.

Our varnishes are right—always.

If you are not handling our varnishes, write for the "B-13" Booklet. It gives our varnish proposition.

TRAVELLERS' GRIEVANCES.

(Special from our own Correspondent.)

WINNIPEG, December 29.—A mass meeting of travellers and business men was held on Saturday evening when the following was passed unanimously after an animated discussion:

Whereas, disorganization of passenger train service has caused not only great personal discomfort and pecuniary loss to the travelling public, and especially to commercial men, but has also brought its attendant loss to business classes;

Whereas, no attention is given by railway corporations to complaints of inefficiency of train service;

Therefore, be it resolved that this meeting is of the opinion that a committee should immediately be appointed to interview proper authorities of our transportation companies with a view of obtaining better accommodation for the travelling public;

Whereas, travellers cannot secure in many towns proper hotel accommodation, be it resolved that a committee be appointed to approach the proper officials of the Government of Manitoba, and Territorial Legislative Assembly regarding hotel accommodation throughout the country, be it further resolved that if no satisfaction be given to committees appointed that they be instructed to call another meeting for the purpose of taking stronger measures to procure needed reforms in train service and hotel accommodation.

MR M'DOUGALL A BENEDICT.

Mr. A. W. McDougall, of The Rice Lewis Co., Limited, of Toronto, was married on January 1, 1903. On the day preceding his marriage the travellers and employes generally presented him with a handsome cabinet of cutlery. Mr. A. E. Gilverson made the presentation on behalf of the staff. Mr. McDougall replied briefly, expressing the hope that the pleasant relations which had existed between himself and the firm for the last 12 years would increase in the future.

HOCKEY STICKS AND SKATES.

H. S. Howland, Sons & Co. are pleased to inform the trade that they have just received a fresh shipment of "Mic-Mac" hockey sticks. There will, of course, be still big sales of sticks and the trade will be glad to know that they will be able to receive a fresh supply. This firm also state that their stock of skates is well assorted and they are still able to supply the trade in this line. They prepared for a large business in these this year and have not been disappointed.

INQUIRIES AND ANSWERS.

A subscriber wants to know the name of the manufacturer of the Elgin S. wrench. Can any of our readers supply the desired information?

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

PHILIAS BORDUAS, wood and lumber merchant, Longueuil, Que., is offering to compromise.

Raoul Laparre, contractor, Montreal, has assigned.

A. Desmarteau is curator of Celestin Beaulieu, general merchant, St. Agathe des Monts, Que.

Joseph Forciere, general merchant, of Ste. Anne des Plaines, Que., has, as curator, Notary Villeneuve.

Thomas Dulac, general merchant, of St. Victor de Tring, Que., is offering to compromise at 25c. on the dollar.

PARTNERSHIPS FORMED AND DISSOLVED.

John B. Foster retires, and S. G. Morton continues under the old style.

Vezina & Goneau, general merchants, of Three Rivers, Que., have dissolved.

Cummings & Black, lumber merchants, Grand View, Man., have dissolved; Cummings continues.

Colby, Scott & Co., manufacturers of hay and stock racks, Chatham, Ont., have dissolved; Jacob Colby retires.

SALES MADE AND PENDING.

The assets of Laveau & Cie., hardware merchants, Quebec, are to be sold.

Owen Bros., sawmillers, Richard's Landing, Ont., are advertising their business for sale.

The assets of J. D. Lacerte, general merchant and wholesale leather dealer, of Plessisville, Que., are to be sold.

CHANGES.

Phil. Morin & Cie, general merchants, of St. Tite, Que., have registered.

J. W. Low, general merchant, Russell, Ont., has opened up a branch at Medcalfe.

T. R. Constantine, general merchant, of Elgin, Man., is succeeded by Constantine & Steeves.

Robert Frederick Campbell and Alexander Allan, of Calgary, N.W.T., have registered as proprietors under the style of R. F. Campbell & Co., manufacturers of mattresses, Vancouver, B.C.

FIRES.

N. Comeault, general merchant, Letellier, Man., has been burned out.

Leiser & Hamburger, general merchants, Ladysmith, B.C., have been burned out.

Caleb Morris, general merchant, Advocate Harbor, N.S., has been burned out.

Blackney Bros. & Co., general merchants, of Petitcodiac, N.B., have been burned out.

William Warcup, general merchant, Kinnear's Falls, Que., has been burned out; partially insured.

The stock of L. Galibert, wholesale leather dealer, Montreal, was damaged by fire and water; insured.

DEATHS.

V. Breton, carriagemaker, St. Francois, N.E., Que., is dead.

Clarence Primrose, of Primrose Bros., Pictou, N.S., is dead.

George Beaucage, contractor, of St. Alban, Que., is dead.

Chas. W. De Wolfe, of De Wolfe & Densmore, hardware merchants, St. Stephen, N.B., is dead.

NINETEEN HUNDRED AND THREE

MACHINERY AND ELECTRICAL SUPPLY DEPARTMENT

MACHINERY AND ELECTRICAL NOTES.

THE Owen Sound Iron Works Company, Limited, are putting new plates on the bow of the steam-barge Algonquin, and have the contract for general repairs to that vessel and her sister ship Rosedale.

It is estimated that more steel is used in the manufacture of pens than in all the sword and gun factories in the world.

A large drilling machine was shipped to The Gray and Bruce Portland Cement Co., of Owen Sound, by H. W. Petrie, Toronto.

The Hamilton Brass Manufacturing Co. are suing The Colonial Construction Co., of Toronto, for $2,000 damgaes for alleged breach of contract.

John Clark, superintendent of The Hamburg Manufacturing Company, Brandon, Man., is on a visit to Ontario to buy machinery for a new planing mill.

The Montrose Paper Co., of Thorold, Ont., have installed a 110 H.-P. boiler to furnish power for their plant, which was purchased from H. W. Petrie, of Toronto.

A suspension drill and two 23-in. Barnes drills have been added to the plant of The Taylor Safe Works, Toronto. These machines were installed by H. W. Petrie, Toronto.

The Buffalo Tool and Machine Company, Bay street, Toronto, have sold a Brown gasoline engine, a buzz planer, a variety saw table and a swing-saw to G. S. Rogers, of Thedford, Ont.

Thomas Kennedy is installing twenty wood working machines in his factory at Fort William, Ont. H. H. Dale, of the same place, also intends to add machinery to his sash and door factory.

Kerr & Coombs, iron founders, of Hamilton, Ont., have bought the premises formerly owned by Copp Bros., in Hamilton. They expect to move into these works next week, when they will increase their staff until it is double the number now employed.

The International Harvester Company, who are erecting immense works near Hamilton, Ont., to manufacture Deering agricultural implements, purchased 35 more acres of land last week, paying about $38,500, and have announced that they will make their works even larger than at first proposed.

J. F. Tilley, Victoria, B.C., and Harvey Mitchell, New Brunswick, have signed contracts to go to South Africa to instruct farmers in dairying methods and to supervise the establishment of butter and cheese factories. These gentlemen should be able to place agencies for Canadian dairying and agricultural machinery.

While working at a bench on which a can of gasoline oil stood, a workman, named A. Poirier, in Montreal, allowed a lamp too near the gasoline. An explosion followed, causing severe burns about the face and arms of the workman.

A despatch from Toronto Junction, Ont., says that a newly-organized company, which intends to go into the manufacture of cement bricks, will in all probability locate at or near Toronto Junction. It is proposed to erect a building 80 x 300 ft., which will be equipped with the most up-to-date machinery, and 30 to 40 hands will be employed when the works are in running order.

It is a common practice to make the steering axles for automobiles of solid forgings with forks or sockets at the ends for receiving the steering knuckles, says Scientific American. This renders a heavy and expensive axle for the strength required. L. G. Nilson, of New York, has invented an axle to overcome these difficulties by providing an axle that shall be comparatively light, with sufficient strength, and so constructed that the knuckles and springs may be easily fastened in place.

In reply to an inquiry as to how to obtain red cherry color on pure copper, done by immersion in hot acid, not by battery or dynamo, The Scientific American says: "A color of this kind in copper can be obtained by slowly heating in an air bath, with gradually rising temperature. Long heating at a comparatively low temperature will give the same effect. As soon as the desired color is obtained, cool rapidly by plunging into cold water. If lacquered after finishing, it will keep better."

The legal difficulty in the way of Toronto granting exemptions, making streets, etc., and giving free land to The Toronto Steel Company, for the establishing of rolling mills, has been overcome by the decision on the part of the Toronto City Council to make the streets, etc., as a public benefit, not as for the particular benefit of the proposed mills. As this comprises the bulk of the intended inducements offered to The Toronto Steel Company it is now thought there will be no difficulty about the establishment of their works in Toronto.

BICYCLES AND ACCESSORIES.

During the present season The Yarmouth, N.S., Cycle Company will be represented on the road by E. R. Fenwick, of St. John, N.B., and P. E. Armour, of Charlottetown, P.E.I. This firm do a wholesale business in bicycles and accessories, and are Canadian agents for The Columbia Phonograph Company., of New York; and Maritime agents for The Durham Rubber Company, makers of the "Darlington" tires. They are fully equipped for all kinds of repair work and carry a well-assorted stock, so should readily increase their connection in the eastern Provinces. Hardware dealers wanting good lines to handle should get into touch with this house.

CEMENT WORKS NEAR BELLEVILLE.

The Belleville Portland Cement Company have decided to erect their plant at Port Ann, near Belleville, Ont. This company has just been incorporated with a capital stock of $2,500,000. It will be one of the largest mills in the world and will turn out as much cement as all the mills in Canada together. Prof. Carpenter, the expert, who examined the company's property, expresses the opinion that there is enough material quarried to manufacture from 600,000 to 1,000,000 barrels of cement. Much of this material is reduced to a fine condition and will save in the cost of manufacturing fully 5c. per barrel. He estimates the value of the material quarried will save the plant $50,000 during the construction of the buildings and the first year of operation. He says, also, that the works are very favorably situated for the shipment of coal by water, owing to the large quantity of coal needed for the manufacture of fuel.

WILL MAKE IRON AND STEEL GOODS.

The Centrifugal Windmill and Manufacturing Company, Limited, with a capital stock of $20,000, headquarters at Guelph, Ont., will manufacture windmills, towers, tanks, pumps, anvils, hammock chairs, and novelties in steel, iron and wood. The charter members are George Alvin Black, agent; Francois Xavier Franks, coal merchant; Louis Conrad Wiseman, architect; George Kickley, manufacturer, and George D. Pringle, jeweller, all of Guelph, Ont.

BRAZING CAST IRON.

H. A. WARD, of The American Brazing Company, Philadelphia, states that by the discovery of the new process of brazing cast iron has changed the methods in European foundries with reference to complicated castings, especially in the case of large castings where a flaw or imperfection of any kind involved the relegation of the piece to the scrap pile. The patterns were now cut into two or more parts, so that each was a simple piece to mould, and the several parts that went to make up the whole were brazed together, so that in effect when the brazing operation was complete, the several pieces that went to make up the whole casting were as one entire casting, and the cost of production had been reduced, in that the cost of brazing was very much less than the cost of moulding one large casting. Mr. Ward explained that flaws in castings were eliminated by drilling them out if they were small, and brazing in a plug made to fit the hole. If they were large and in the nature of a crack, and if the crack was wide, a piece of any kind of iron was fitted into the space and brazed into place. If narrow, the crack was cleaned out thoroughly and brazed up. If it was so that it could not be cleaned in this way, the fracture was extended by hammering until the entire break could be reached to clean, even if this involved breaking the piece entirely in two. The cost of the Ferrofix involved was about half a cent per square inch of surface brazed.

In tests made for the Government in Berlin, at the Stevens' Institute at Hoboken, at the University of California, and by the Pennsylvania Railroad, it had been demonstrated, he said, that the brazed joint was not only stronger than any portion of the casting of equal section, but that the iron adjacent to the joint had its strength increased perceptibly, the tensile strength being raised from 50 to 200 lb., and the traverse strength as much as 2,000 lb. It was believed that this was not due to any action of the chemical on the iron, but was entirely owing to the fact that in cooling down from the brazing heat, this cooling down was much more rapid than when the casting was originally made, the effect on the iron being to increase its strength by reason of this more rapid cooling.

MAY CHEAPEN BLACK TINPLATE.

The officials and directors of The United States Steel Corporation, during their recent inspection of plants, visited the Monongahela works of The American Tin Plate Company, to inspect the new equipment being built, for the purpose of rolling black plate at what is expected to be a much lower cost. This new method is the invention of Charles W. Bray, chief engineer of The American Tin Plate Company, and if it proves successful, is expected to cut the present cost of rolling black plate more than half. The new equipment has not been completely installed, and it will not be known for some time whether the new method is a success.

MACHINERY AND SUPPLIES CATALOGUES.

ENGLISH MOTORS AND ALTERNATORS.

We have received from The Fuller-Wenstrom Electrical Manufacturing Company, 110 Cannon street, London, Eng., copies of their recent price lists on continuous current motors, poly-phase motors, and of alternators, for the manufacture of which this firm have obtained a wide-world reputation. Liberal discounts are offered to the trade. Copies of these price lists will be sent to any of the Canadian trade, and mentioning "Hardware and Metal."

PREPARATION MACHINERY.

A catalogue that will be of interest and value to millmen and houses selling mill machinery has been issued by Henry Livesey, Limited, Blackburn, Eng. The machines included in this work are cop, drum and firm winding machines, winding frames, twirling and drawing-in frame, cloth-plaiting machines, hydraulic cloth press, slasher, and cool-air sizing machines, bobbins, etc. As this firm is one of the most progressive makers of looms and textile machinery in the world, all millmen and supply-houses should see their catalogues which can be had by any "Hardware and Metal" reader.

FOR BRAZING BRASS TO COPPER

This formula for brazing brass to copper is very useful. The solder which unites the two metals must be soft brass, which will melt much easier than the brass which is to be joined to the copper, otherwise the work would melt at the same time as the solder. The edges of the work must be carefully cleaned, and then the parts brought together into their proper place and secured with iron wire. The flux to be used is borax, rubbed up in water until it is like a fine cream. The solder, which may be in the form of beads, strips, or wire, is next distributed along the joint. The amount of heat and the method of applying depend entirely upon the size of the work to be done. If the work is small, the blowpipe is by far the most convenient and safest, because if the heat is too great there is danger that the brass part of the work will be melted. The heat is to be applied until the solder melts. As soon as the solder melts or "flushes" the work should be struck, so as to jar it just enough to make the solder flow into the joint. To find out whether the solder is soft enough for the work a piece may be laid upon a bit of brass of the same kind as that of which the work is made, and put it into the fire. If the solder melts considerably sooner than the brass it will be safe to use it for the work. If, on the other hand, they both melt about the same time, a softer solder will be needed. Spelter solder may also be used for the purpose.

TO PREVENT SMOKE AND INCREASE HEAT.

A simple but successful remedy for smoke has been brought to notice by a British engineer. It is known as the Wilson smokeless process, and it consists in injecting a mixture of air and nitrate of soda solution on the fire. Though the first trial was crude, with dirty soft coal under a Babcock boiler, the dense smoke from the chimney was reduced to invisibility. Tested further, the smoke was not only cured, but there was an increase of more than 20 per cent. in the output of the boiler and its evaporative efficiency. The theory advanced is that the solution of nitrate of soda creates nuclei of intense heat which fire the gases and enable the injected air to combine with them.

ELECTRIC MOTORS IN ROLLING MILLS.

ELECTRIC motors are now used in many of the large rolling mills of Europe, where their operation has proved very successful. The Nordisk Mills at Stockholm have been using electric power for some time past. Another application of electric motors to operate steel-plate mills is at The Antwerp Steel Works, where a plant has been lately installed. The current is furnished from the new central station erected by The Antwerp Electric Company, to produce 25,000 horse-power each at 2,200 volts. At the steel works both high and low tension are used for the motors. A number of small motors drive different apparatus, such as travelling cranes, shears, small rolls, etc., and these all take current at 200 volts, which is fed from transformers. The large rolls, however, use the main current at 2,200 volts without transformation, employing non-synchronous motors which work at variable speed. One of the largest rolls, turning at 70 revolutions, and having a 30-ton flywheel, is operated by belt from 325 H.-P. motor, and a second roll, the heaviest in the plant, has a 450 H.-P. motor.—Machinery World.

Louis A. Schneider has established a plant for the manufacture of jewellery at Orillia, Ont. The machinery, including engine and boiler, a lathe, drill press and emery stand was furnished by H. W. Petrie, of Toronto.

INSOLVENCY LEGISLATION

An Address on the Subject by Duncan M. Stewart, General Manager of The Sovereign Bank.

MR. STEWART'S reply was as follows: Before coming directly to the subject, I wish to pay my tribute to the excellence of your annual report, and more especially your financial statement. Balance sheets are to a banker what a compass is to a mariner provided they are correct.

Its chief characteristics are clearness and conciseness and reflect credit alike on your treasurer and the excellence of your system of bookkeeping.

There are just two points I wish to dwell upon, but very briefly. The first of these, I am very glad to observe from the published report of your annual meeting, has been taken up by this Association, viz.: "Insolvency Legislation."

It is only within the past month or so that a prominent commercial body in England placed itself publicly on record as stating that trade between England and Canada was retarded by the absence of a proper bankruptcy law in this country. I do not know to what extent this may be the case, but I can easily understand that the existing conditions here might lead to a considerable restriction in trade between the two countries, because in England they have been accustomed to bankruptcy Acts for generations, and even the laws of the commercial world respecting bills and notes trace their origin mainly to bankruptcy Acts.

I think we are agreed that the present system, by which each Province operates under a different insolvency Act is not satisfactory to the commercial interests of Canada, any more than it is to the mercantile community of Great Britain. What is needed is uniformity of practice, and this, I think, can only be secured by having one insolvency Act operative throughout the entire country and passed by the Dominion Parliament.

Without going into the history of insolvency legislation in Canada, I may say that in my judgment, the Bill introduced by Dr. Fortin, member for the Dominion House, two years ago, is, on the whole, the most satisfactory which has been proposed for many years. When the Bill was first introduced, it created a great deal of discussion, and a most unfortunate, as well as unfair, impression became prevalent that the banks were opposed to it. One or two bankers may have opposed it, but bankers are only human, and differences of opinion exist between them, just the same as they do amongst other members of the commercial community.

I think, however, I am safe in saying in a broad sense, that the interests of the banks and the commercial community are so inextricably associated and dependent one upon the other, that any measure that is beneficial to the trade and commerce of the country cannot injuriously affect the chartered banks, and I am sure no good banker would oppose it. The two main points in previous insolvency Acts which the banks generally opposed were: (1) Deprivation of the right to claim against an insolvent for the full amount of paper discounted, whether in the form of direct loans or customers' paper, and (2) The granting of discharge to insolvents who have not paid a reasonable amount on the dollar to creditors.

After Dr. Fortin's Bill was introduced in the House of Commons, the bankers met the representatives of the leading boards of trade, who were acting in the interests of the merchants, and a satisfactory understanding arrived at on the points mentioned. After that nothing more was heard of the Insolvency Act. It has got to come, however, and the sooner the better. Insolvency legislation involves a great deal more than the mere private interests of corporations or individuals, and I consider a question of morals. We should all unite therefore in the interests of the commonwealth in securing an Act which will at least have these two features distinctly prominent, viz.: The discouragement of reckless trading; and the absolute impossibility of a fraudulent insolvent benefiting pecuniarly by his dishonesty.

I have spoken longer than I intended, but with your kind indulgence I will refer for only a moment to my one other point, and I do so because I am impelled to it by a sense of duty, which this opportunity perhaps renders more than ordinarily incumbent. I refer to the subject of stock speculation. Gentlemen, you have no idea of the wide extent of this pernicious evil. It exists in banks, wholesale houses, shipping offices, and even amongst the farming community, and I feel that a word of warning may not be out of place here. For the benefit of the young men of the commercial world, I would say that I have never known a man of ordinary ability who worked hard and attended strictly to his own business, who did not make a success, whereas it is within the experience of most of us to know men of more than average ability and brains who have been swamped in the vortex of the stock market, who might have been princes among merchants had they devoted all their energies and abilities to the business they understood.

GRATIFYING INCREASE.

In your annual report I find that the increase in the membership of the Dominion Travellers' Association is greater than any previous year since 1882; and reflects the great activity and growth of the wholesale trade, consequent upon the increased settlement and development of the resources of our country. I congratulate you upon the increase in your membership, but, as you know, the results of our magnificent harvests and the benefits derived from the general expansion of business have not been confined to any one class or section of the community. The prosperity has been widespread and pretty generally distributed, and what is more, I can see no good reason for believing that in the near future we are going to have a halt in this onward march of progress. Canada holds out inducements to the young man today that cannot be excelled, if, indeed, equalled, by any country in the world. But to be successful he must learn to earn his bread "by the sweat of his brow"; he must learn some one line of business, stick to that and master it, and he must carve his way upward and onward by hard work, which is the only royal road to success. He cannot do this and have his mind on the stock market, but in these days it requires a strong will to resist the temptation to make some of the money for himself which he hears of others making so easily. It is characteristic of men to speak about their profits, but you seldom hear of their losses on the Stock Exchange. During the past two years, however, there has been such an enormous rise in the prices of certain stocks that some men became rich beyond all their expectations, and many a merchant and trader who had worked hard all his life became dumfounded at the apparent ease with which his fellow-citizens accumulated fortunes, besides which the results of his own years of labor and diligence paled into insignificance.

Now, gentlemen, it is only fair to say that I think Montreal has suffered less in this respect than probably any other city in the Dominion, and I attribute this in a large measure to the conservative attitude of our local stock brokers. I know a case in a western city where a broker carried $25,000 worth of a non-dividend paying stock for a man whose salary was less than $2,000 a year on a margin of $1,000.

This is but one illustration of many similar cases which exist, which are bound to lead to the financial ruin of many young men, if the period of depression in stocks is further prolonged. If I do not wish to be misunderstood in this matter. Trading in stocks is just as legitimate as trading in dry goods or boots or shoes. The wholesale merchant buys goods in the expectation of selling them five or six months later and then takes promisory notes which he expects to be paid three or four months after that. He cannot tell whether he will get paid or not and buys his goods wholly on his judgment of the future and with the expectation of selling out at a profit. But he has the advantage of years of experience; he knows his clients, as well as his market, and makes due allowance for emergencies. All that is part of his experience; it is his business, and he is expected to know and understand it. But when he buys stocks and shares, what does he know about them? Does he know the cost of the company's raw material, its expenses, management? Very seldom. Good investments are to be had from time to time and it is not amiss for a merchant to put some of his surplus funds into them. But he should be sure he has the surplus. The young man who waits till his business is in that position will have sufficient experience to guide him in case he wishes to put some spare cash into the stock market. It is to the young traveller, the young clerk and the embryo merchant, particularly, I direct these remarks.

Much of the success of the banquet was due to the following gentlemen, who composed the banquet committee:

Messrs. James Robinson, chairman; S. A. Agnew, W. P. Beauchamp, Fred Birks, F. S. Cote, James Croil, L. O. Demers, J. S. N. Dougall, E. F. Doutre, J. F. L. Dubreuil, J. T. Dwyer, W. H. Evans, A. D. Gall, F. X. D. De Grandpre, D. M. Lefebvre, G. A. Mann, C. M. Mills, P. J. Paradis, John Paterson, Charles Roberts, Gus Tasse, R. C. Wilkins, and H. W. Wadsworth, secretary.

PAINT, OIL AND BRUSH TRADES

INDIA-RUBBER VARNISHES

INDIA RUBBER varnishes can be made from the following recipes, according to an exchange:

A. Soak the best raw rubber for several days in a weight of the fatty acids from linseed oil half as great again as its own. Then heat with boiled linseed oil until solution is complete. The weight of the boiled oil taken is double that of the fatty acids.

B. A combined solution of copal and raw rubber in the usual solvents is heated with sulphur. It is said that this varnish will stand a temperature of 400 degree F. without becoming sticky and without cracking.

C. A varnish which is recommended for woodwork to be exposed to damp is made by dissolving raw rubber in bi-sulphide of carbon previously saturated with sulphur.

D. Fuse together raw rubber and colophony at the lowest possible temperature, and then add a solution of colophony in benzole until the desired consistency is attained. All the ingredients must be perfectly free from water, and the process of drying them before compounding the varnish is rather difficult and troublesome. It is said that dry coats of this varnish resist acid extremely well.

E. A mixture is made by heating together petroleum residues, raw india-rubber, and coal-tar. Sulphur can also be added. The proportions vary largely with the consistency of the ingredients. The varnish can be thinned with any suitable ordinary vehicle.

EXPLOSION OF PETROLEUM.

"There are three factors necessary to cause an explosion of petroleum," says Professor O'Neill, of the University of California. "There must be a certain amount of oil gas or vapor, air and a temperature sufficient for ignition of the mixture. The proportion of air and vapors necessary to make an explosion vary according to the composition of the oil. Any departure from this mixture will diminish the liability and violence of the explosion. The temperature of ignition is usually high.

"It is a mistake to say that an explosion can be caused only by light oils; heavy oils when heated may, and frequently do, give off considerable vapor and it is possible that a heavy oil at a high temperature is as dangerous as a light oil at a moderate heat. Before making an arbitrary standard for fuel oils based only on the flash test, a careful survey of the whole question should be made. Many other factors besides gravity and the flash point determine the safety of an oil."

PILKINGTON'S VANCOUVER BRANCH

Pilkington Bros. have opened a warehouse at the corner of Powell street and Columbia avenue, Vancouver, and will carry a large stock there. It is believed that this firm intend to make Vancouver their distributing headquarters on the Pacific Coast, and such being the case, an exceedingly large and varied stock of plate-glass will be carried. A. G. Tyne is the Vancouver representative of the firm, and in the past has done principally an order business for the Pilkingtons. It is due to his increasing sales that a local stock is to be carried.

THE PRICE OF PETROLEUM.

While there is no advance this week in the price of petroleum the market continues to stiffen. The many new uses to which crude oil is being put are rapidly increasing the consumption, which is estimated by The Paint, Oil and Drug Reporter to be over a million barrels a month in excess of the production. This demand is being supplied from the reserves held by the large companies, the bulk of it being in the possession of The Standard Oil Company. As that company controls the market they are now in a position to push up prices, and are doing it as fast as the market will stand, while other companies are closely following their lead. The indications point to a continuance of present prices, with the possibility of futher advances.

PAINT AND OIL NOTES.

Lafontaine & Bastien, painters, Montreal, have dissolved.

The Winnipeg Oil Co., Limited, are applying for incorporation.

Sydney, Australia, City Council, are experimenting with residual oil for dust laying purposes on the city streets.

Ralph E. Thornloe, paint dealer, etc., of Montreal, has assigned and his creditors will hold a meeting next Monday.

McCaskill, Dougall & Co., manufacturers of varnishes, Montreal, have dissolved. D. A. McCaskill has retired, and the business will be continued by James S. N. Dougall and Gustaf Gylling under the old style.

THE ZANZIBAR PAINT CO.

The liquidation of The Zanzibar Paint Company and the sale of the plant and premises of the company for $2,110 to The Canada Paint Company has aroused considerable comment. In fact, it is likely that proceedings will be taken against some of the shareholders and directors in connection with certain stock held by them.

The Zanzibar Company was organized about a year ago with a capital stock of $100,000. At the time $80,000 stock was allotted to Mr. Richardson, the Cleveland promoter of the company, in return for formulae and manufacturing rights. Part of this he shared with other members of the company, who now claim that this stock is "paid-up," on account of formulae and rights given for it. This claim is disputed by some of the creditors. The liabilities of the company are nearly $15,000, the principal creditors being the Bank of Hamilton, $6,650; The United States Smelting and Refining Company, $1,292; The Walker Oil Company, $1,435. The bank's claims are covered by securities, but for the remainder of the creditors, whose claims are about $8,000, there seems to be nothing but the proceeds of the sale above noted. Now, the consideration is, will steps be taken against any of the stockholders of the company?

MONTREAL TRAVELLERS.

The travellers for nearly all the paint and oil houses in Montreal have been off the road since before Christmas and will not go out again till the first of next week. They are all looking forward to a large spring trade and expect to start right in next week with good orders.

TORONTO.

PRICES are unchanged throughout. Trade is dull, all the travellers being off the road. We quote as follows:

WHITE LEAD.—Ex-Toronto, pure white lead, $5 to $5.25; No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½.; No. 4, $3.50 to $3.75 in packages of 25-lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. pkgs.; genuine dry white lead in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.50 to $4.75; ditto, in kegs of 100 lb., $5. No. 1, in casks of 560 lb., $3.75 to $4; ditto, kegs of 100 lb., $4.25.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In 5-gallon lots, 60 to 75c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb.; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35c.; in less than cases, 40c. per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.25 to $2.35; white, $2.35 to $2.45 per gal.; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8½c. per lb.; cabinet glue, in bbls., 12c.; emery glue, in bbls., 17½c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.25; bladders, in 100-lb. kegs, $2.40; bulk in bbls., $1.90; bulk, less than bbls. and up to 100 lb., $2.05; bladders, bulk or tins, less than 100 lb., $2.90.

PARIS GREEN.—Petroleum bbls., 14c. per lb.; arsenic kegs, 14½c.; 50 and 100 lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. packages, 16c.; ½-lb. packages, 18c.; 1-lb. tins, 16c.; ½-lb. 18c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c per lb. in less quantity; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 9 to 9½c. per lb. and 10 to 10½c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 65c.; boiled, 68c.; 3 to 5 barrels, raw, 64c.; boiled, 67c.; 6 to 9 barrels, raw, 62c.; boiled, 65c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 bbls. and over of linseed oil sold only f.o.b. Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 77c.; 2 to 3 bbls., 76c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

GASOLINE AND BENZINE.—We quote: Benzine, 19½c. and gasoline, ordinary, 21½c. and engine, 22½c. f.o.b. Toronto.

MONTREAL.

The holiday season keeps the markets very quiet as far as the general trade is concerned, but there is still quite a demand for lines used by manufacturers working indoors. Paris green continues in good demand with no change in prices. Linseed oil and turpentine is unchanged locally, but in the primary markets the former is still very inactive, and the latter strong with a rising tendency. Prices are as follows:

GROUND WHITE LEAD.—Best brands, Government etandard, $4.90 to $5.15; No. 1, $4.67½ to $4.77½; No. 2, $4.30 to $4.40; No. 3, $3.92½ to $4.02½; No. 4, $3.55 to $3.65 all f.o.b., Montreal. Terms, 4 months, or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—$5.25 in casks; kegs, $5.50.

DRY WHITE ZINC.—Pure dry, in casks, 6¼c.; in 100-lb. kegs, 6¾c. No. 1 zinc, in casks, 5¼c.; in 100-lb. kegs, 5¾c.

WHITE ZINC (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No.2, 6c.

PUTTY.—We quote: Bulk, in bbls., $1.90 per 100 lb.; bulk, in less quantity, $2.05; bladders, in bbls., $2.25; bladders, in 100 or 200-lb. kegs or boxes, $2.40; in tins, $2.55 to $2.65; in less than 100-lb. lots, $3 f.o.b. Montreal, Ottawa, Toronto, Hamilton, London and Guelph. Maritime Provinces, 10c. higher, f.o.b. St. John and Halifax.

ORANGE MINERAL.—Casks, 7c.; 100-lb. kegs, 7¼c.; smaller quantities, 8¼c.

RED LEAD.—Genuine red lead, in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities, $5.75 per 100 lb. No. 1 red lead, casks, $4.25; kegs, $4.50, and smaller quantities, $5.50.

LITHARGE.—Ground, casks, 5c.; less quantities, 5½c.; flake litharge, casks, $5.25; smalls, $5.75 per 100 lb.

LINSEED OIL.—Raw, 60 to 63c. in 1 to 4 bbls.; 59 to 62c. in 5 to 9 bbls. Terms, net cash in 30 days. Delivered in Ontario, between Montreal and Oshawa, at 2c. per gallon advance.

TURPENTINE.—Single barrels, 75c.; 2 to 4 barrels, 74c. Terms, net cash in 30 days.

SHELLAC VARNISH.—Pure white, $2.35 to $2.45; orange, $2.25 to $2.35.

MIXED PAINTS.—$1.20 to $1.45 per gallon.

CASTOR OIL.—8¾ to 9¼c. in wholesale lots, and ½c. additional for small lots.

SEAL OIL.—48 to 50c.

COD OIL.—35 to 37½c.

PARIS GREEN.—Petroleum barrels, 13¼c. per lb.; arsenic kegs, 13½c.; 50 and 100-lb. drums, 14c.; 25-lb. drums, 14½c.; 1-lb. packages, 15c.; ½-lb. packages, 17c.; 1-lb. tins, 16c.; ½-lb. tins, 18c.

WINDOW GLASS.

TORONTO.

Prices keep steady, but there is nothing doing, and our quotations are still as follows: Under 26 inch, $4.25; 26 to 40 in., $4.65; 41 to 50 in., $5.10; 51 to 60 in., $5.35; 61 to 70 in., $5.75; 71 to 80 in., $6.25; 81 to 85 in., $7; 86 to 90 in., $7.75. Toronto, Hamilton and London. Terms, 4 months, or 3 per cent. 30 days. Discount, 15 per cent.

MONTREAL.

Prices keep steady, but there is very little business doing. Prices are unchanged. We quote: First break, 50 ft., $2; second, $2.10 for 50 feet; first break, 100 feet, $3.80; second break, $4; third break, $4.50; fourth break, $4.75.

TAKING ADVANTAGE OF THE BEST IS THE DEALER'S DUTY.

Duty to himself—duty to his customers. The "best" tells. This is doubly true of Brushes, and more especially of Paint Brushes. To do good work a painter must have a good Brush. There's nothing in which high-grade quality and careful workmanship tell more than in a Paint Brush.

BOECKH'S Flexible Bridled Brushes

are in greater demand than any other Paint Brushes, because they deserve to be.

BECAUSE

The bridle can easily be removed and replaced
The bridle is not affected by water, oil, or paint.
The bridle works on a pivot and thus keeps the bristles elastic.

STOVES AND TINWARE

AND ALLIED TRADES

MARITIME HEATING CO., LIMITED.

AN Amherst, N.S., despatch says that the prospectus of a new concern has been issued in that town. The gentlemen nterested are J. Avard Black, William Knight, John A. Laws, J. Crossman, and C. A. Lusby, of the present Amherst Foundry and Heating Co., and D. W. Robb, head of the Robb Engineering Co.

The object of the new concern is to acquire from the Robb Engineering Co. the right to manufacture and sell the well-known Robb Hot Water Heater, and from the Amherst Foundry and Heating Co., the premises now occupied by them in Amherst, and such of the plant as they may require in their new business.

J. Avard Black will take the active management, while J. A. Laws will be the mechanical superintendent. Both these gentlemen are eminently qualified by practical experience for their respective positions. The authorized capital will be $100,000. Of this amount it is proposed to issue one half, the balance to be available later. $25,000 will be required for the purchase of the properties mentioned above and $10,000 worth of new machinery will be added, leaving $15,000 for material and working.

Mr. Black and his four associates in the Amherst Foundry and Heating Co. and D. W. Robb have taken $15,000 of the amount and the balance, $35,000, will be offered to the public.

FRED. G. BRENTON MARRIED.

Fred. G. Brenton, the local manager of the Gurney-Oxford Stove Co., was married in the Dundas Street Methodist Church on Saturday morning to Miss May Deeley, of Ontario street, daughter of Mr. and Mrs. Fred. Deeley. Rev. C. T. Scott performed the ceremony in the presence of a company comprising only the relatives of the parties. Mr. and Mrs. Brenton left on the 10.25 a.m. express for the Coast. London, Ont., Free Press.

ELECTRIC COOK STOVES.

Complete electric cook stoves are being placed in several new apartment houses. Each division of the stove has a separate heater, which may be used without the others simply by turning a small switch. At the present price of electric current the cost of cooking by electricity is a little more than by gas or coal, but when the new system comes into more general use the price is expected to be reduced. The time will come when farmers will light their house, yard and barns and do their cooking by electricity generated by windmills and stored in storage batteries. American Artisan.

AN ELECTRIC WATER HEATER.

In reply to an inquiry as to how to make a simple electric water heater suitable for heating a small glue pot, by using the current that supplies the ordinary incandescent light; some sort of arrangement that could be set in the water if possible, the Scientific American says: "For an electric heater to be used in place of an ordinary incandescent lamp you should not take more than one ampere of current. German silver wire may be used, No. 24 being a good size. If the current is of 110 volts pressure, 330 feet will be required. If it is 52 volts, about 150 feet will answer. This must be wound and insulated by asbestos, else the fire insurance is void. It should be inclosed in a metallic tube, in order to place it in the water to be heated. Twice the length of iron wire may be used."

AMONG THE TRADE.

THE Chicago Journal fears that, notwithstanding the great increase in the use of plate mica sheets for stoves, chimneys and electrical supplies, and of scrap mica for boiler coverings, etc., the importation of mica from Canada and India is likely to curtail the production in the United States.

Alex. Anderson, dealer in scrap iron, Montreal, is dead.

The Mystic, Que., Foundry Co., have registered to do business.

The Mount Royal Foundry Co., Montreal, has been incorporated.

Alex. Payette & Co., tinsmiths, St. Johns, Que., have registered as a business concern.

Thos. Griffin, foundryman, Guelph, Ont., is enlarging his founday, making it 40 x 20 ft.

Geo. E. Macdonald and C. M. Marpole have registered as coal dealers under the style of Macdonald, Marpole & Co., Vancouver.

The Canadian Tinplate Decorating Co. are looking for inducements from Berlin or London, Ont., on condition that they establish a factory in either of those municipalities. They offer to spend $13,000 on plant and to employ an average of 50 men at an average salary of $10 a week. J. W. Donovan and J. Thompson represent The Canadian Tinplate Decorating Co.

AN UNUSUAL TINSMITHING JOB.

Australian Hardware tells of an unusual tinsmithing job recently performed by Mr. Foxcroft, of Greymouth, New Zealand. A number of Chinese, employed under contract, visited different cemeteries throughout the colony and disinterred the bodies of Celestials for removal to the land of their birth. Where the remains consisted of bones only they were wrapped in a cloth, after being washed and dried, and placed in a wooden coffin. But where any portion of the flesh remained, an inner air-tight zinc coffin was used, and it was for the making and sealing up of these that Mr. Foxcroft was employed. He was the only European in the party. Altogether 460 bodies were removed, a steamer having been specially chartered to convey them to China.

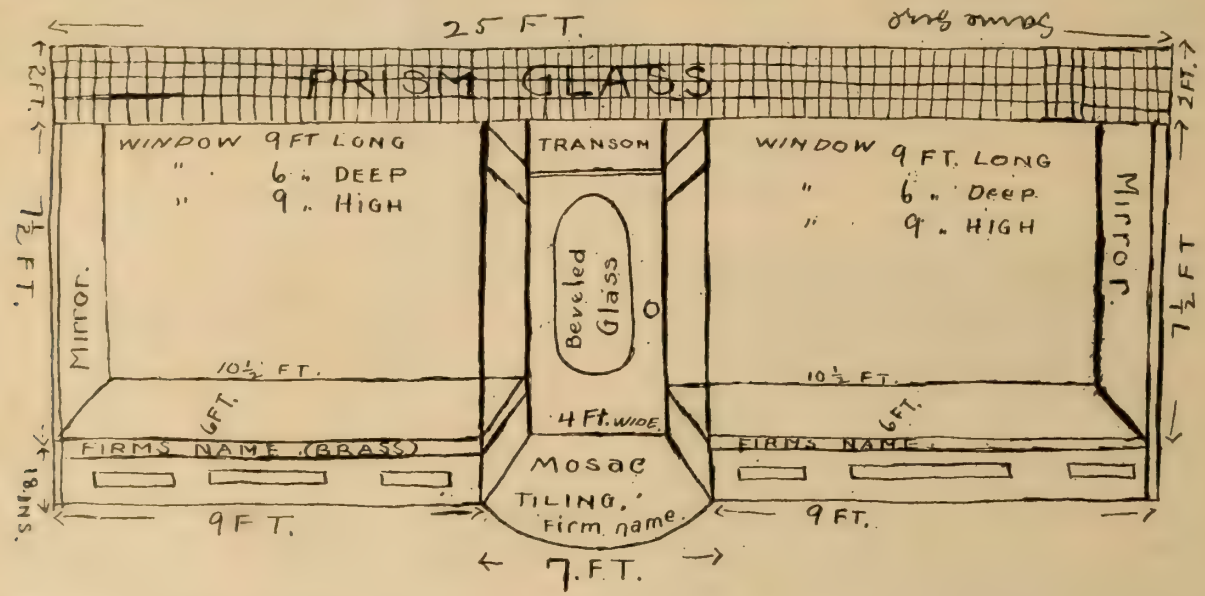
Store and Store Front Arrangement.

"M AND S.", St. John, N.B., ask for information and suggestions on arranging a store front. Store is 80 ft. deep and 25 ft. wide. They state in their letter that back of store is well lighted, but that centre of store is not light enough. The rough drawing conveys my idea of the best means of laying out this front. According to this plan you could get two nice windows, 9 ft. high, 10½ ft. long at back and 6 ft. deep. The entrance could be made 7 ft. wide at street level, receding to 4 ft. at door, which would make a nice entrance. The front glasses could be 9 ft. long and background of window would be 1½ ft. longer. Along the top of the frontage, prism glasses could be laid in. These magnify the light and would flood the interior with plenty of light. These should be 2 ft. wide. For backgrounds for the windows I would prefer a mirror the full length of the back, divided into two separate mirrors, one of which should slide so as to admit of entrance to and from the window. These mirrors should be 6 ft. high, with an oak or walnut cornice at top. Above the mirror glass should run to the ceiling. The space above the mirror to ceiling, where the glass goes, would be 3 ft. 6 in. in height. The light is thrown from the prisms, through the glass above the mirror into the store. The prism glass could be in sections, and one section should swing either on pivots or hinges so as it can be opened for ventilation at any time. This could be run from a cord inside the store. At the wall end of windows a mirror should be placed—a continuation of mirror at back would be the proper thing. This end mirror heightens the effect of the trim and gives it immensity. The window floor should be 18 in. from street level. The firm's name in brass could run across the front of window, as indicated in drawing, and below this a panelling in oak. The door might have an oval-bevelled plate-glass instead of the everyday style. The flooring of vestibule should be in fancy tiling, with the name of the firm inlaid. In winter, storm-doors could be put on outside, flush with the front. These doors would be 3 ft. 6 in. wide (each), one to push in and the other to push out. Over the door should be a transom in prism glass, to work on a pivot so as it could be opened for ventilation. For lighting I would recommend the "Fink" method, which consists of a long trough-shaped reflector with incandescent lamps. The funnel-shaped reflector is all right provided there are enough of them. These reflectors should be attached to ceiling as near to the pane as possible. The light is thrown by means of these directly on the goods below and is evenly distributed provided the reflectors are turned straight down towards the floor. According to this plan, I don't see why (if you adopt this idea), how you can get a more up-to-date front out of the space you have. This plan will give you two good-sized windows and an ample-sized entrance, and you would have the interior excellently lighted. If any of our readers can see anything that would be an improvement over this description, "Hardware and Metal" would be pleased to hear from them so that we might suggest the improvement to our inquirer. We trust our correspondent may find something in this plan that will suit his requirements.



FIRE IN WHOLESALE HOUSE.

Fire broke out in the basement of The Canada Hardware Co.'s warehouse, 10 Debresoles street, Montreal, on Saturday evening, December 27, and did serious damage. By the efforts of the firemen the fire was confined to the basement, although the sample-room was damaged by smoke to some extent.

The business of the company was interrupted for only a short time, their Common street warehouse coming in very handily. At the time of writing arrangements with the insurance companies have not been completed.

The loss is between $6,000 and $7,000. The insurance was $80,000, divided among the various companies.

WITH THE SEASON'S COMPLIMENTS

On Christmas eve, as the employes of The James Robertson Co., Limited, Montreal, were leaving the works, each was presented with a Christmas present in the shape of a turkey. Everyone in the company's employ, from the highest to the lowest, was thus reminded of his employer's good will. This is an annual occurrence.

MAR 27 1903
RETURNED

1865-1903

WE

now enter upon our thirty-eighth year as manufacturers of horseshoe nails, our business being established in the year 1865. To our friends in the trade we

WISH

that their many favors in the past shall continue to be extended to us in 1903, and that we shall mutually enjoy a larger and more profitable business than last year.

YOU

may rely upon our best efforts to maintain the supremacy enjoyed by our "C" brand horse nails for the past 37 years, and to merit the confidence and good-will of the merchant trade by our business methods.

A

horse nail can be made at a low price or a high price. If you want low-priced nails we must use low-priced and, therefore, inferior material: if you want the best—or "C" quality—nails, we have to procure the best material in the world, and that always means the highest price. We would be

HAPPY

to know of any material for making horse nails which would combine the lowest price and the best quality. It doesn't exist. Any maker who offers horse nails at a lower price than ours either does so at a sacrifice of all profit, or by using lower-priced material. Our works and facility are unequalled in Canada.

NEW

processes for making horse nails have only the claim of being low-priced: none have proved equal for quality to the old reliable "hot-forged" process used by us. It thoroughly hammers the nail from a solid rod of Swedish charcoal steel. If you will, during the

YEAR

upon which we now enter, keep an assortment of "C" brand horse nails in your stock, and ask the farriers to note carefully the results in their work, you and they will be surprised at the result. Quality, like blood, tells. Ask for them.

Canada Horse Nail Co.
MONTREAL

TESTS OF NOVO STEEL.

NOVO steel, for lathe and planer tools, is a steel of wonderful durability for turning old tires, axles and packing rings, and not only do tools of this steel keep the cutting edge 15 to 20 times longer than the best self-hardening steel, but you can also increase the speed on the lathe and planers 3 and 4 times, and, in many instances, up to the full limit of your machine.

The following tests have been made in railway shops in the United States: At the L. & N. shops at Louisville, Ky., the Novo steel bored a Midvale tire at 91 ft. per minute, 1/8 in. cut, 1/8 in. feed, and finished a number of tires at that speed without requiring sharpening. At the Michigan Central shops, Jackson, it turned axles and finished them without grinding the tool, at 95 ft., 3/4 in. reduction, 1/8 in. feed. Old Krupp tires the Novo steel turns regularly 25 ft. per minute, 1/2 in. cut, 1/8 in. feed, and every Novo tool will finish the tire without grinding.

A test on packing rings, at the E. Milwaukee shops of the Chicago, Milwaukee & St. Paul Railway Co. is 66 ft. per minute, 3/4 in. cut, 1/8 in. feed, and the tool roughed the tire outside on the scale and finished the job without grinding.

A large number of the railway companies of this continent have adopted the Novo steel in their shops, amongst whom are the following: Pennsylvania Railway, Altoona shops and all divisions; Lehigh Valley Railway Co., all divisions; B. & O.; L. & N.; Chicago & Northwestern; Great Northern; Chicago, Omaha & St. Paul; Chicago, Milwaukee & St. Paul; Michigan Central; Atlantic Coast Line; Dunkirk works and Paterson works of the American Locomotive Co.

Novo steel can be annealed so that it machines as well as tool steel, and it can be made into twist drills, milling cutters, taps and reamers, which will do phenomenal work.

The following is a test of a twist drill made in one of the largest locomotive works in this country: A 1 1-32 in. Novo twist drill drilled at 188 revolutions per minute 506 holes into very hard steel castings of an average thickness of 5/8 in. For comparison, a twist drill of a well-known standard make was put on exactly the same castings, and the speed was reduced to 80 revolutions per minute, and this drill bored five holes, and the sixth hole it hopelessly burnt out.

William Abbott is the Canadian agent.

Joseph Shaw, general merchant and implement dealer, Beausejour, Man., is succeeded by Joseph Shaw & Co.

brands you will be content.

MARKETS AND MARKET NOTES

QUEBEC MARKETS

Montreal, December 31, 1902.

HARDWARE.

THE demand for general hardware this week has not been large, but during the month of December two or three houses report having done the largest business they had ever experienced this season. There have been but few changes in prices. New lists are out on shovels, scoops, spades and "Star" traps, and these will be found in our quotations. Most of the travellers are in their respective warehouses now getting ready for the new year's business, which gives indications of being excellent for spring. A number of changes are, as usual at this time of the year, taking place in many of the travelling staffs.

SHOVELS AND SPADES.—The new list on shovels and spades is here given. The grades are known by the following names: First grade, "Jones'," or "F. & W."; second, "Burns'," or "Dunn's"; third, "Gray's," or "Gold Medal"; fourth, "Olds'," or "Beaver." The discount on both shovels and spades is 45 per cent. off. In shovels, the first grade remains at $18.50 for square, and $19 for "D" handle round; No. 2, $16 for square, and $16.50 for "D" handle round; No. 3, square, $13.50, for "D" handle round, $14; No. 4, both square and round, $11.50; culls, $9. This is a reduction on all grades under No. 1 of from $1 to $3. In spades, No. 1 is also unchanged from $18.50; No. 2, $16; No. 3, $13.50; No. 4, $11.50; culls, $9. The same reduction in price as in shovels will be noticed in spades.

SCOOPS.—The new list on half-polished socket scoops is as follows, No. 0, $12; No. 2, $16; No. 4, $17; No. 5, $17.50; No. 6, $18, all less 45 per cent.

STAR TRAPS.—A new list is just out on Star traps, as follows: Without chain, No. 0, $2.25; No. 1, $2.50; No. 2, $3; No. 2½, $4.50; No. 3, $4.32; No. 4, $8. With chain, No. 0, $3.25; No. 1, $3.65; No. 2, $4.15; No. 2½, $5.75; No. 3, $8.50; No. 4, $9.50. The discount is 50 per cent. off.

BARB WIRE.—Not much business has transpired this week. The price remains at $2.90 per 100-lb. keg, f.o.b., Montreal, and $2.55 f.o.b., Cleveland.

GALVANIZED WIRE.—The movement is still slow and no quotable changes have been made. We quote: Nos. 6, 7 and 8 gauge, $3.20; No. 9, $2.55; No. 10, $3.30; No. 11, $3.40; No. 12, $2.70; No. 13, $2.80; No. 14, $3.80; No. 15, $4.30; No. 16, $4.55; No. 17, $4.95; No. 18, $5.20. In carlots, f. o. b. Cleveland, the prices are: No. 9, $2.15; No. 12, $2.30; No. 13, $2.40, not dutiable. No. 10, $2.20; No. 11, $2.25; No. 14, $2.50; No. 15, $2.95; No. 16, $3.05, dutiable. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—There has been but little done this week. Prices are unchanged, and our quotations are as follows: Bright and annealed, $2.50 per 100 lb. f. o. b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE WIRE.—No change has been made this week. The discount is 25 per cent., with net extras as follows: 1 and 2-lb. hanks, 25c. per 100 lb.; ½-lb. hanks, 37½c. and ¼-lb. hanks, 50c.

BRASS AND COPPER WIRE.—There is not much demand as yet in these lines. The discount is 62½ per cent.

FENCE STAPLES.—Trade is still quiet. We quote: Galvanized, $3 per 100-lb. keg; bright, $2.80. 25 and 50-lb. packages, 25c. extra.

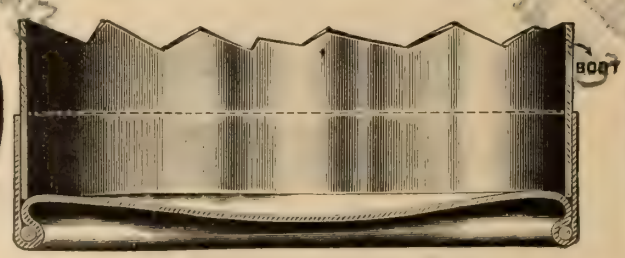
WIRE NAILS.—The movement in wire nails this week is light. In carlots, the price is $2.40 and in smaller quantities, $2.45 per keg f.o.b., Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

"Samson" Milk Cans and Trimmings

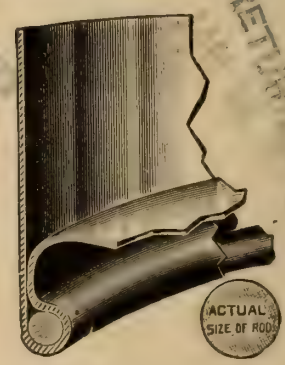
PATENTED, JULY 23, 1900

"Samson" Railroad or Delivery Cans and Trimmings.

"Samson" Dairy Pail Bottoms.



Section of "Samson" Milk Can Bottom



PATENTED, JULY 23, 1900

The "Samson" is the strongest and **ONLY ONE-PIECE** bottom made.

Has no place for dirt or sour milk to lodge—therefore the only sanitary bottom made.

Every bottom in each size is of an exact diameter. Being stamped with a die there can be **NO** variation, as in a bottom made in several pieces.

"Samson" Railroad or Delivery Cans and Trimmings are always furnished with Seamless Neck, and Seamless or Bell Cover, which, combined with the "Samson" Bottom, makes this unquestionably the best Railroad or Delivery Can ever placed on the Canadian market.

The "Samson" Dairy Pail Bottom is made the same as the "Samson" Milk Can Bottom, and therefore has all its good features.

A complete stock of Tinned Sheet Iron in all gauges and sizes always kept on hand.

CUT NAILS.—A few orders have been placed, but the market rules quiet and steady. We quote: In carlots, $2.40 per keg, and in small lots, $2.45 per keg.

HORSE NAILS.—A fair trade is being done. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent. off; on "M" brand, "Oval," 57½ per cent.; "New City," 57½ per cent; "New Countersunk," 65 per cent.; "Monarch," 65 per cent.; "Peerless," 50 and 7½ per cent.

HORSESHOES.—A moderate demand prevails for horseshoes. Prices are unchanged. Our quotations are now as follows: Iron shoes, light and medium, pattern, No. 2 and larger, $3.35; No. 1 and smaller, $3.60; snow pattern, No. 2 and larger, $3.60; No. 1 and smaller, $3.85; X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.45; No. 1 and smaller, $3.70; featherweight, all sizes, 0 to 4, $5; toe weight, all sizes, 1 to 4, $6.25. Shoes, more than one size in a keg, 10c. per keg extra. F.o.b. Montreal only.

RIVETS AND BURRS.—Not much has been done in this line during the week. The discounts are quoted as follows: Best iron rivets, section carriage, and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS.—There is little business passing in bolts or nuts. Discounts are: Norway carriage bolts, 55 per cent.; common, 50 per cent; full square carriage bolts, 55 per cent.; machine bolts, 50 and 5 per cent.; coach screws, 66 2-3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50 and 5 per cent. To any retailer an extra discount of 10 per cent. is allowed. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3¼c. per lb. off list; hexagon nuts, 3¾c. per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—The demand for screws has not improved and the market remains quiet. We quote the discounts as follows: Round head bright, 82½ and 10 per cent.; flat head bright, 87½ and 10 per cent.; brass, round heads, 75 and 10 per cent.; brass, flat heads, 80 and 10 per cent.

CORDAGE.—There is but little doing. We quote as follows: Manila, 14c.; British manila, 12c.; sisal, 11½c.; lathyarn, 11c.

BUILDING PAPER.—No further change has been made in the price of tarred felt. The demand is light, and our quotations are as follows: Tarred felt, $1.75 per 100 lb.; 2-ply, ready roofing, 85c. per roll; 3-ply, $1.10 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 50c. per roll; tarred fibre, 60c. per roll; O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN WIRE CLOTH.—Trade is dull. The price is $1.40 per 100 square feet.

FIREBRICKS.—The market shows no improvement. We quote: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—Trade this week has been quiet. We quote: Canadian cement, $1.90 to $2.25; German, $2.20 to $2.30; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl., ex-wharf, and American, $2.10 to $2.20 ex-cars.

SKATES.—A good movement in skates still prevails. No changes in prices have been made. We quote as follows: Halifax pattern, 36c. per pair, nickel plated, 65c. per pair, ladies' nickel plated, 60c.; per pair, ladies' concave nickel plated, $1.35, piam hockey, 27c. to $1.35, nickel plated hockey, 60c. to $2.50; double-end hockey, $1.50 to $2. Skate straps, 35c. to $1.35.

HOCKEY STICKS.—A fair business has been done. Our quotations are still as follows: Best second growth, goal keepers', $4.20 per doz.; ash, $2.90; elm, $2.25; boys' elm, $1.10; common, 90c. Regulation pucks, $1.50 per doz.

SNOW SHOVELS.—A moderate demand prevails. We quote, "Habitant," $2.25 to $2.40; "Victor," 30 per cent. off; steel railroad shovels, 48 and 5 per cent. off.

FIRE SHOVELS.—There is an active movement. Quotations follow: No. 70, 38½ to 40c. per dozen; No. 55, 55 to 60c.; No. 57, $2½ to 90c.; No. 60, $2½ to 90c.; No. 65, $1.37½ to $1.45; No. 80, 50 to 55c.; "Duplex," No. 7, $1.21; No. 9, $1.52; No. 11, $1.82.

COAL HODS.—Only a moderate demand is experienced at present. We quote as follows: Japanned, 16-in., $4.50 per doz.; 17-in., $4.80; 18-in., $5.10; with gold band, 17-in., $5.10; 18-in., $5.40. Galvanized, 16-in., $6.20; 17-in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

LANTERNS.—There is still some movement in this line at unchanged prices. We quote: Tilt, lift or hinge, No. 0, $4 per dozen; Cold Blast, $7 per dozen; dashboard, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper-plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

METALS.

Prices on the local market have remained steady during the week. The demand during the holiday week kept up fairly well and the tone of the market is firm in most lines. Foreign pig iron is reported to be offering at reduced prices, but although the market here is rather quiet and the position of pig iron is not too strong, there has been no decline in the prices. Structural material is in fairly good demand. Iron bars show something of a tendency upwards.

BAR IRON.—During the holiday week orders fell off a little, but there was still a good movement. We quote as follows: Merchants' bar, $2; horseshoe iron, $2.25; forged iron, $2.20.

BLACK SHEETS.—There is nothing new to report on this market. A fair movement is reported. We quote as follows: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 24 gauge, $2.50, 8 to 20 gauge, $2.50.

GALVANIZED IRON.—There has been a little improvement on this market, and we quote: No. 28, Queen's Head, $4.40; Apollo, 10½ oz., $4.40; Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand $4.05. For less than case lots 25c. extra is charged.

SOIL PIPE AND FITTINGS.—Trade is quiet. The discounts are as follows: Light soil pipe, 3 to 6 inch, 50 per cent., medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8 inch, 45 per cent.; light fittings, 2 to 6 inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.; extra heavy fittings, 8-inch, 45 per cent.

We extend to our customers the Season's Greetings.

And take this opportunity of thanking them for their patronage during the past year.

PIG IRON.—The market is quiet, but prices are maintained as yet at $23.50 to $24.50, ex store, Montreal.

INGOT COPPER.—Copper is easy at $12.50 to $13.50 per 100 lb.

INGOT TIN.—There is no change. The price is steady at $27.50 to $28.50 per 100 lb.

PIG LEAD.—There has been little doing during the week. In carlots the price is $2.90 and in small lots, $3.25.

LEAD PIPE.—There is a fair movement. Composition and waste are quoted at 8c. and ordinary at 7c. The discount is 37½ per cent.

IRON PIPE.—There is an active market at unchanged prices. We quote as follows: Standard pipe, per 100 feet, in lengths under 19 feet: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1 in., $5.20, 1¼, $7.35; 1½, $8.95; 2-in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.45; ½, $3.85; ¾, $5; 1-in., $7.20; 1¼, $10.05; 1½, $12.20; 2 inch, $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, ½, $4.20; ¾, $5.25; 1-in., $7.55; 1¼, $10.55; 1½, $12.75; 2-in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1-in., $9.55; 1¼, $13.25; 1½, $16; 2 in., $21.90. For threads and couplings 5 per cent. is added.

TINPLATES.—Both local and foreign markets have been fairly steady. Here, there has been no quotable change, and cokes sell at $4.25 and charcoals, $4.75 to $5.25.

STEEL.—Prices show no change. Some buying is reported during the week, but the market ruled quiet at the following prices. Sleighshoe, $2.10; tire, $2.20; bar, $2.05; spring, $2.85; reeled machinery, $2.75; toecalk, $2.60; machinery (iron finish), $2.10; mild steel, $2.05; square harrow, $2.15.

TOOL STEEL.—Business is very quiet. Quotations follows: Black Diamond, 8c.; Sanderson's, 8 to 12c., according to the grade; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 65c. per lb.

CANADA PLATES.—There is no new feature to note this week. A good movement has kept up in galvanized plates. We quote: 52s, $2.70 to $2.80; 60s, $2.85 to $2.90; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.45 to $4.55.

TERNE PLATES.—We quote $7.50.

COIL CHAIN.—There is not much doing this week. We quote as follows: No. 6, 12½c.; No. 5, 10½c.; No. 4, 10c.; No. 3, 9½c.; ¼ in., 7¼c. per lb.; 5-16, $5; 5-16 exact, $5.25; ⅜, $4.25; 7-16, $4.05; ½, $3.95; 9-16, $3.85; ⅝, $3.55; ¾, $3.50; ⅞, $3.45; 1 inch, $3.45. In carload lots an allowance of 10c. is made.

SHEET ZINC.—There is very little doing. We quote $5.85 to $6.15.

ANTIMONY.—Quiet at 10c.

ZINC SPELTER.—Orders for spelter have been very few during the week. We quote 5c.

SOLDER.—Bar solder sells at 20c. and wire solder at 18c., with a fairly good trade doing.

SCRAP METALS.

No further advance is reported in machinery scrap prices, but the market is still firm, though not particularly active. We quote as follows: Heavy copper and wire, 9c. per lb.; light copper, 8c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $15 to $16; No. 2, $7 per ton; machinery scrap, $16.50 to $17; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6½ to 6¾c. per pound.

HIDES.

Beef hides are reported 1c. lower this week. The market during the holiday season is naturally quiet. We quote as follows: No. 1 hides, 7½c.; No. 2, 6½c.; No. 3, 5½c.; calf skins, 8 to 10c., and lambskins, 65c.

RAW FURS.

Receipts of raw furs this week have been large, owing, in a measure, to the holiday season. Considering the character of the market this year, however, the business during the past week and this is fairly satisfactory. Fox skins are still wanted, and the prices are firm. We now quote:

MONTREAL NOTES.

Beef hides are ½c. lower.

New lists have been issued on shovels, spades and scoops; also on "Star" traps.

ONTARIO MARKETS.

Toronto, January 2, 1903

HARDWARE.

ALL the jobbers reported that the hardware trade was quiet at the turn of the year. The travellers are off the road preparing their samples to start work next week, and in the meantime the wholesale trade are busy taking stock and finishing up the business of the old year. The prices of tarred felt have advanced 5c. per 100 lb. of 2-ply, and 3-ply ready-roofing, 5c. per roll

each, and carpet felt, $5 per ton. The discount on spades and shovels has been changed to 45 per cent., instead of 40 and 5 per cent., as heretofore. The list price of Olds' goods have been reduced $3 per dozen, Gray's, $2 per dozen, and Burns', $1 per dozen. This depreciation was made solely to meet foreign competition.

BARB WIRE.—The market for barb wire was dull this week and the prices were unchanged. We quote the base price as follows: $2.67½ from Cleveland, and 12½c. less in carlots. From stock, Toronto, $3.

GALVANIZED WIRE.—The holiday dullness pervaded the galvanized wire market this week, and our quotations are still as follows: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.65 to $2.85; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.80 to $3; No. 13, $2.90 to $3.10; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE.—Trade in this line is quiet. We quote the base price as follows: $2.50 per 100 lb. Oiling, 10c.; coppering, 60c. and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

FINE STEEL WIRE.—The jobbers report that there was no business transacted in this wire. The discount is 25 per cent.

WIRE NAILS.—These are dull and unchanged. We quote: $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS.—There is little doing in these. We quote $2.50 per keg.

HORSE NAILS.—The volume of business is light and prices are unchanged. Discounts are as follows: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "M" brand, 50, 10 and 5 per cent.; on "Monarch," 65 per cent., and "Countersunk" head, 65 per cent.; "Peerless," 50 and 7½ per cent.

HORSESHOES.—Business in this line is slack, owing to the holiday season being on hand. Our quotations are as follows: Iron shoes, No. 2 and larger, light medium and heavy, $3.45; snow shoes, $3.70; light steel shoes, $3.55; feather weight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—The holiday dullness pervades in this market. The manufacturers are still busy with their orders and the jobbers are in some measure enabled, owing to the demand falling off, to replenish their stocks. Our quotations are as follows: Flat head bright, 87½ and 10 per cent. discount; round head bright, 82½ and 10 per cent.; flat head brass, 80 and 10 per cent.; round head brass, 75 and 10 per cent.; round head bronze, 65 per cent. and flat head bronze, 70 per cent.

RIVETS AND BURRS.—These are still quiet. The wholesale dealers are busy taking stock and the factories are trying to catch up in their deliveries. Prices are as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent. copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—A quiet tone dominates the market for bolts and nuts this week. Quotations are as follows: Carriage bolts, common ($1 list), 50 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron ($3.00 list), 55 and 10 per cent.; machine bolts, all sizes, 50 and 10 per cent.; coach screws, cone points, 66 2/3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—These are quiet. There have been a good many goods of British and American manufacture entering into competition with the domestic article and a considerable reduction has been made in the price of the Canadian goods. The discount is now 45 per cent., and the list price has been reduced $3 per dozen for Olds' goods, $2 for Gray's, and $1 for Burns'.

ROPE.—Trade in rope has fallen off with the holidays. The prices are unchanged. Our quotations are as follows: Pure manila, 14c.; British manila, 12c.; sisal, 12c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3-cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—The holiday dullness continues in the market for harvest tools. The discount is quoted at 60 and 10 per cent.

LAWN MOWERS.—These are inactive and unchanged in price this week. Prices are as follows: Woodyatt, 12-in. wheels, $7.50; Star, 12-inch wheels, $5.50; Daisy, 12-inch wheels, $4.90; Philadelphia, 10-inch wheels, $6; Ontario, 10-inch wheels, $12.75. The other prices are in proportion.

GREEN WIRE CLOTH.—There has been little business transacted this week in green wire cloth. The prices continue unchanged. We quote $1.40 per 100 square feet.

EAVETROUGHING, ETC.—Trade in this line is now at a standstill. Prices follow: Eavetroughing, 10-in., per 100 ft., $3.10; conductor pipe, 2-inch, per 100 ft., $3; 3-inch, $4; 4-inch, $5.25; 5-inch, $6.75 and 6-inch, $9.

CUTLERY.—There have been very few orders received this week for cutlery. The market is dull and prices are steady and unchanged.

BUILDING PAPER.—The prices of tarred felt have been advanced 5c. per 100 lb. of ready-roofing, 2 and 3-ply, 5c. per roll, and carpet felt, $5 per ton. Trade is slack. Quotations are as follows: Dry sheathing, grey or straw, 35c. per roll; tar sheathing, grey or straw, 45c. per roll; dry fibre, 50c. per roll; tarred fibre, 60c. per roll.

TINWARE AND ENAMELLED WARE.—The market is dull and unchanged. The holidays have caused the demand to fall off greatly, and the manufacturers and jobbers are taking stock and preparing for another year's trade.

STOVES AND RANGES.—There is little business being transacted in the wholesale market in stoves and ranges. The season is well over and jobbers now are taking a rest after a busy year's work.

SCREEN DOORS.—As is to be expected trade in screen doors amounts to little or nothing. The turn of the year will likely bring in some new business. Our quotations follow: Screen doors, common, two or three panel, walnut stained, 3-in. style, $6.60; stained, yellow or green, $6.80; in natural colors, oil finish, $8.15; 4 in. style, 20c. per dozen extra.

CEMENT.—This market is now quiet. The manufacturers are now preparing for next season's campaign and are looking out to do a big business when the proper

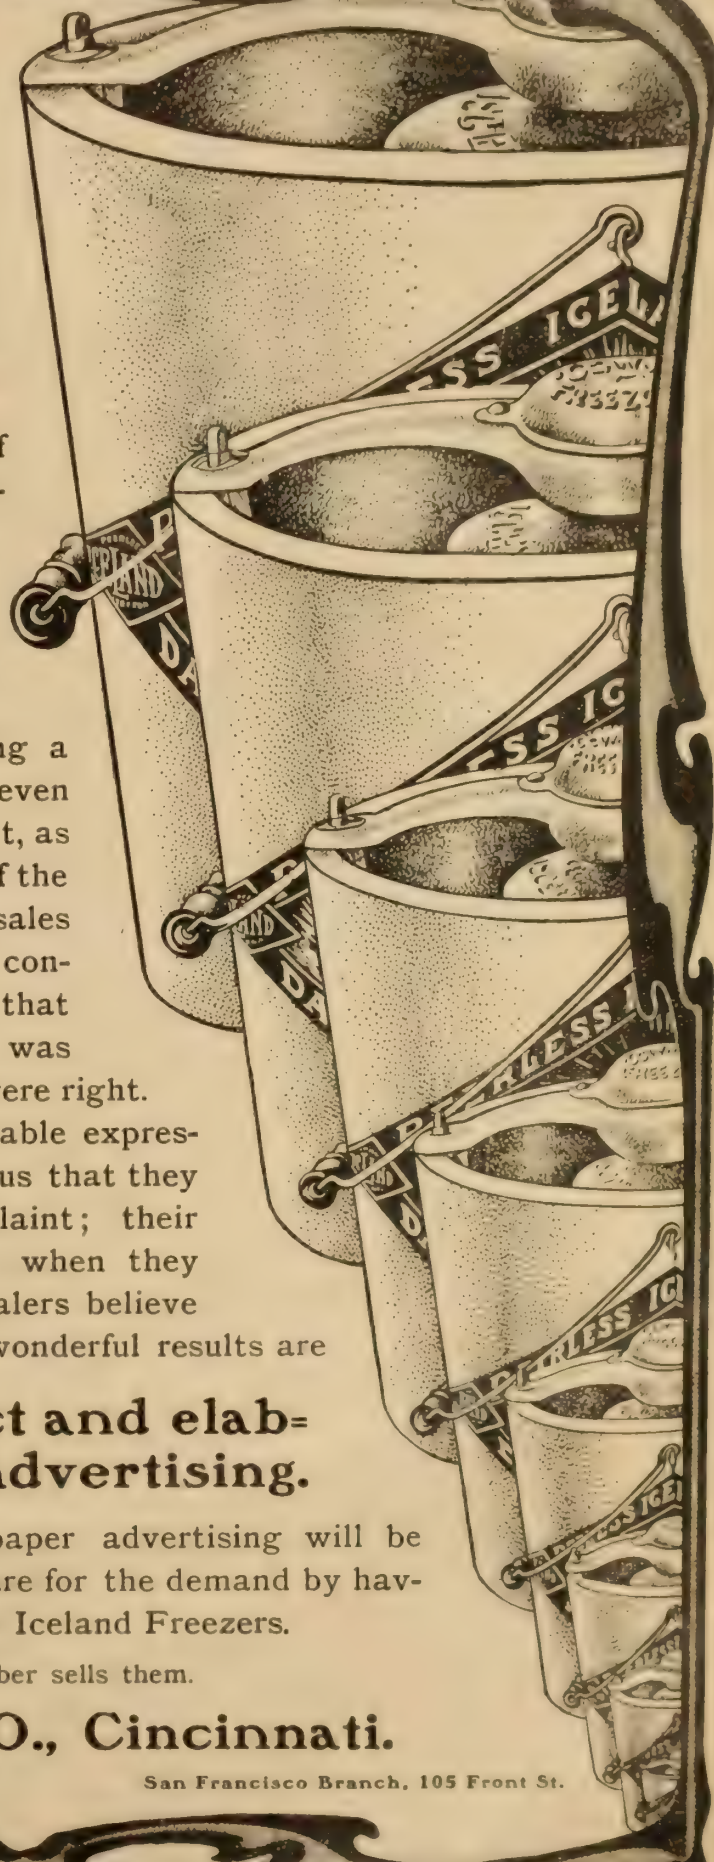
Peerless Iceland

Freezer Sales each year
Since the start 8 years ago

are represented by the size of these freezers. Dealers experienced a proportionate increase in their sales. This shows what eight years manufacturing of an article of excellent value accompanied by eight years of good advertising will do. Introducing a competitive article is slow work, even if it is better than the others. But, as soon as people realized the value of the Peerless Iceland Freezer, the sales were limited only by our power to convince women, dealer and jobber that the freezer was right, the price was right and our business methods were right.



We have thousands of favorable expressions from women. Dealers tell us that they have yet to hear the first complaint; their freezer sales invariably increase, when they handle "Peerless Icelands." Dealers believe in the freezer and say that their wonderful results are

due to our perfect and elaborate system of advertising.

Our magazine and ladies' paper advertising will be stronger than ever before. Prepare for the demand by having on hand a full line of Peerless Iceland Freezers.

Your jobber sells them.

DANA & CO., Cincinnati.

New York Branch, 10 Warren St. San Francisco Branch, 105 Front St.

time comes. Last year, during August and September, over $15,000 barrels of foreign cement were imported into Canada. The domestic production, in round figures, was estimated at 1,100,000 to 1,500,000 barrels, bringing the total consumption in Canada up to 1,200,000 to 1,300,000 barrels. There are, however, several new factories in Canada that will be in operation the coming season, the products of which will be on the market next summer, and it looks as if there would be a considerable surplus of cement on the Canadian market. Whether prices will immediately go lower or not it is difficult to foreshadow, as the manufacturers claim that they have got the cost of manufacture down to its lowest point. Our quotations are: Canadian Portland, $2.80 to $3.20; hydraulic, $1.35 per barrel. At the works the prices are $2.50 to $2.70 per barrel.

METALS.

It is not expected that there will be much business transacted in metals until the holidays are over, although trade is not by any means at a standstill. The local pig iron market is strong and the Canadian furnaces are all sold out for a considerable period ahead. Some English and Scotch iron is being sold in the country. Tin outside continues active and firm. Quiet conditions prevail in the United States iron and steel industry without any sign of weakness, thus suggesting a bright outlook for the new year.

PIG IRON.—The Canadian furnaces have practically sold their output for some time ahead and prices are nominally maintained as quoted below. Some of the English and Scotch product is being offered at figures varying from $21 to $23.50 per ton. Some No. 1 English is being sold at $21, when it can be had. Prices are as follows: $23 to $25 for No. 1 and $22.50 for No. 2 at the Canadian furnaces. No. 2 Summerlee is quoted at $25 on track, Toronto.

STEEL BOILER PLATES.—These have been scarce and none have been sold here for a considerable time. We quote $2 per 100 lb. at Pittsburg.

STEEL RAILS.—The quotations for steam railway rails are steady at $36 per ton at the mills, Sault Ste. Marie, Ont.

TOOL STEEL.—The prices are unchanged. Our quotations are as follows: "B C" and "Black Diamond," 10 to 11c.; Jessop's, 'Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8c. to 9c.; Park's "Silver," 12 to 14c.; Park's "Special," 15 to 20c.

MILD STEEL.—The demand at present is a little quiet, but the prices are firmly maintained. We quote $1.90 per 100 lb. at Pittsburg and $2.75 per 100 lb. on track, Toronto.

SPRING STEEL.—There was reported a falling off in trade at the end of the year, but the mills are so busy that this is not to them perceptible. We quote $3.50 per 100 lb. on track Toronto.

BOILER TUBES.—These are unchanged.

BAR IRON.—Trade in bar iron has fallen off with the holiday season. The tone of the market is firm. We quote base price: $2.05. Extras cut to length while rolling: 2 ft. and over, 10c. per 100 lb., 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft. by special agreement, according to length and size.

BLACK SHEETS.—These are quiet and unchanged. We quote: Common, $3.15 for 28 gauge and dead flat, $2.50 for 26 gauge.

CANADA PLATES.—There is a fair demand for these. We quote as follows: All dull, $2.90 to $3; half polished, $2.85 to $3.10 and all bright, $3.75 to $3.85.

GALVANIZED SHEETS.—The market continues unchanged, and quotations are: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—This has been in good demand. We quote $29 to $30 per 100 lb.

TINPLATES.—The tone of this market is quiet. We quote as follows: Charcoals, $4.75 to $5, and cokes, $4.25 to $4.50 per box.

COPPER.—Ingot copper has been quiet at unchanged prices. We quote as follows: Ingot copper, $13; sheet copper, $22 to $23 per 100 lb.

BRASS.—The demand is light. The discount is 15 per cent.

LEAD.—A quiet tone dominates this market. Prices are unchanged at $3.50 per 100 lb. for pig lead, and $3.75 for bar lead.

IRON PIPE.—Business in iron pipe has quieted down after the holidays. The price per 100 feet is as follows: Black pipe, ⅛-in., $3; ¼-in., $2.30 to $2.40; ⅜-in., $2.65; ½-in., $2.85; ¾-in., $3.65; 1-in., $5.20; 1¼-in., $7.35; 1½-in., $8.95; 2-in., $12.55; 2½-in., $20 to $21; 3-in., $24 to $25; 3½-in., $30 to $32; 4-in., $37.50 to $38.

ZINC SPELTER.—This metal continues inactive. The price is 5 to 6c. per lb.

ZINC SHEETS.—A fair amount of business has been transacted in this line. We quote the base price: Cask lots, $6 to $6.25 and part casks, $6.25 to $6.50.

SOLDER.—There has been a moderate demand for solder this season.

ANTIMONY.—The demand has improved this week. The price is steady at $9 per ton.

PETROLEUM.

The Union Petroleum Company's prices are unchanged this week. Prices follow: Lily White, Canadian, 17½c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 20½c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less. The Queen City Oil Company quote as follows: Sarnia Prime White, 17½c.; Sarnia Water White, 19c.; Family Safety, 20c. in bbls.; Pratt's Astral, 19½c. in bulk.

OLD MATERIAL.

Prices are steady and trade is good lor this time of the year. Prices are as follows: Heavy copper and wire, 10c. per lb.; light copper, 8 to 8½c.; heavy red brass, 9½c.; heavy yellow brass, 8 to 8½c.; light brass, 5 to 5½c.; lead, 2 to 2¼c.; scrap zinc, 3c.; iron, No. 1 wrought, $13 per net ton; No. 2 wrought, $4.50; machinery cast scrap, $15.50 to $16; stove plate, $10; malleable and steel, $6 to $6.50; old rubbers, 6½c. per lb. and country mixed rags, 50c. per 100 lb.

NOVA SCOTIA MARKETS.

Halifax, December 29, 1902.

THE trade in hardware for the last week, except in the line of cutlery, fancy kitchen furnishings and other kitchen goods, has not been extensive. In fact, since Christmas Day there has been practically nothing doing.

* * *

Stocks are now pretty well approximated and also ledger balances, and the consensus of opinion based on these places the business of 1902 ahead of any year for the last five—or even more. In some lines the volume has been remarkably excessive, while all lines have kept up well.

* * *

In Halifax, where every dealer has some special line—which has been held largely by that firm for innumerable years—it is hard to get a general estimate of business from any one firm. It is also hard to distinguish between the activity, wholesale and retail, since nearly every wholesaler is a retailer as well.

* * *

Nearly every firm, however, deals in general builders' hardware. The trade here was remarkably heavy and well sustained from month to month throughout the year. There were heavy building contracts in the city, and throughout the Maritime Provinces generally. The trade is still active and promises well for the coming year. Price conditions were good and fluctuations in no line so great as to materially affect trade. The only general complaint has been that it was, in some lines, difficult to get orders filled at first hands promptly.

* * *

In the line of milling and mining machinery there has also been great activity. Old mines have been refitting largely with new machinery, new mines, both in gold, iron and coal, have opened up, and lumber and pulp mills have contributed largely to the volume of trade. There is also a good indication that the trade in these lines will continue good during the coming year. There has also been an average trade in cordage and lines for the fishing fleet, and for some new vessels.

* * *

Money conditions throughout the year have been above the average. Operations undertaken have had money behind them, and bills have been settled with remarkable promptitude as they fell due. There have been some failures throughout the year, but the aggregate losses were not excessive. One firm in the city—Crowell Bros.—had a serious loss by fire, but they at once secured temporary premises, and with the aid of other firms were able to fill their orders without much interruption. A great part of their stock, ruined by the water, had to be sacrificed at auction, but their business is now running as if nothing had happened.

* * *

The export business for the week has not been large, only amounting to $99,881: To Great Britian, $48,316; United States, $45,070; Newfoundland, $5,495. A large part of the export to the United States was fish for export south.

HEATING AND PLUMBING

HOW THE NORTHWEST IS GROWING

THE past year has been a busy one for the building trades in the Northwest. In Fort William, Ont., over $1,600,000 was spent in building operations, the bulk of it being in extensions to the C. P. R. premises. In Calgary, Alberta, it is estimated that over $500,000 was spent in building operations, principally in business blocks, churches and residences. In Brandon, Man., nearly $290,000 was spent in this channel, the principal item being Alexander & Law Bros.' mill and elevator. In Arcola, Assa., a town only two years old, nearly $90,000 worth of new houses, stores and other buildings have been erected. This town now has over 60 places of business and 700 inhabitants. In Portage la Prairie, Man., new business blocks, houses, a hospital, a skating rink and other improvements have entailed an expenditure of over $220,000. In and about Moosomin, Assa., nearly $100,000 was spent in extensions and new buildings, and about the same sum was spent in Lethbridge, Alberta. In Edmonton, Alberta, waterworks and sewerage systems have been pushed well forward, $140,000 having been voted for this purpose. Curling, hockey and skating rinks to cost $18,000 have been built; also a $30,000 school, a $25,000 hotel, and over 200 houses, stores, etc. About $200,000 is estimated to have been spent in building operations in Dauphin, Man. Many other smaller towns report the expenditure of from $40,000 to $60,000 for new buildings and for improvements during the year, and all of them are optimistic as to the prospects for 1903.

PLUMBING AND HEATING CONTRACTS

TORONTO.

Purdy, Mansell & Co. have the contract for remodelling the plumbing and gasfitting in the Reliance Loan Co.'s premises, King street east.

The Bennett & Wright Co., Limited, Toronto, have the contract for heating, ventilating and plumbing the Macdonald Institute, Ontario Agricultural College, Guelph, Ont., which is to have the latest improvements in these lines, and will be a large job.

The John Ritchie Co., Toronto, have the contract for plumbing and gasfitting in six houses on Shaw street for the Acme Loan Co.; for plumbing and heating a residence in Rosedale for M. C. Ellis; for heating a factory in Parkdale for Delany, Pettit & Co.; for plumbing and heating of Marlett & Armstrong's tannery at Oakville; for plumbing and gasfitting in residences for A. B. Orde, Rosedale, and J. B. Andrews, Parkdale.

BUILDING NOTES.

A large hotel is to be built in Selkirk, Man.

A $25,000 hotel is to be erected at Hamiota, N.W.T.

Hotel Dieu, Chicoutimi, Que., is to be repaired and improved.

A $25,000 company is being formed in Arcola, Man., for a 100-barrel flour mill.

A 500,000 bushel annex will be added to J. G. King & Co.'s elevator at Port Arthur, Ont.

Machinery and lumber is on the ground for the erection of a new sugar refinery in Lethbridge, Alberta, to cost $50,000.

Berlinquet & Lemay, architects, Quebec, have completed plans for a new residence for Mr. Dubuc, Chicoutimi.

A skating rink, to cost $10,000, is to be erected at Portage la Prairie, Man., and a Y.M.C.A. building may be built in the same town.

BUILDING PERMITS ISSUED.

HAMILTON.

Levy Bros., alterations to warehouse on King street; W. & W. Stewart, architects; Campbell Bros., builders.

TORONTO.

Francis Phillips, pair semi-detached houses near Bloor street, on Manning avenue, to cost $2,000.

John Bucksey, pair of dwellings on Waverley road, near Queen street, to cost $1,100.

Geo. Bell, a brick dwelling on Greenwood avenue, near Gerrard street, to cost $1,000.

MONTREAL.

The following building permits were issued during the month of December:

Simpson & Peel, 10 St. Philip street, two-storey carpenter shop, $3,000.

Montreal Light, Heat and Power Co., one-storey engine-room, Prince street, $2,500.

A. Champayne, Huntley street, two-storey dwelling, $1,500.

Alf. Mercure, Duluth avenue, three-storey dwelling, $3,000.

Henry Morgan & Co., three-storey factory, Union avenue, $5,000.

Wm. Hurtubise, Lalonde street, two-storey dwelling, $1,800.

The Montreal Light, Heat and Power Co. are erecting a generating store on Queen street, $1,000.

James Ross, McTavish street, two-storey dwelling, $1,500.

A. Beck & Co., three-storey factory, St. Charles Borrome street, $2,000.

PLUMBING AND HEATING NOTES.

THE Carman, Man., Electric Light and Power Co., Limited, are applying for incorporation.

A. Rochon, plumber, Ottawa, has suffered loss by fire.

La Campagnie Electrique de Lorette, Que., have been incorporated.

The Rapid City, Man., Power, Light and Woollen Manufacturing Co. have been incorporated.

R. H. Lear & Co., dealers in gas fixtures, etc., Toronto, have assigned, and the estate will be wound up.

The Amherst, N.S., Foundry and Heating Co. is preparing to remove in the spring to their new premises lately acquired by them, and will seek incorporation under the name of The Amherst Foundry Co., Limited. The personnel of this firm will remain the same as under the old name.

TORONTO PLUMBING BY-LAW.

W. N. Braybon, secretary of the Toronto branch of the Journeymen's Union, has written to the Master Plumbers' Association asking, on behalf of his union, for a conference between committees representing the Masters' Association and the Journeymen's Union, to consider the drafting of a new plumbing by-law, which matter was considered by a joint committee in 1900, but with no results. The Master Plumbers' committee, appointed to meet the journeymen, is composed as follows: James H. Wilson, Wm. Mansell, Frank Maxwell, Mr. Pickard, K. J. Allison, and Geo. Clapperton. The date for the meeting of the joint committee has not yet been set.

OFFICERS OF THE N.W.C.T.A. FOR 1903

At the annual meeting of the Commercial Travellers' Association, held in Winnipeg on December 20, the following officers were elected for the ensuing year :

President—R. M. McGowan (acclamation)
Vice-President—J. H. Agnew (acclamation).
Treasurer—L. C. Macintyre (acclamation)
Secretary—F. J. C. Cox
Directors—G. F. Bryan, F. W. Drewry, F. C. Fahey, H. W. Hutchinson, T. P. McIntyre, J. A. McTaggart, R. J. Campbell, J. McRobie

The report of the directors and the treasurer show a most satisfactory year.

The new publication to be known as The Commercial Traveller, which is about to be issued, received the endorsement of the Association. At this meeting it was decided to call a mass meeting of all interested in the providing of better transportation facilities and hotel accommodation for travellers, this meeting to be held in the Y.M.C.A. auditorium on Saturday, December 27.

At this meeting it was also decided to send out balloting papers for an expression of opinion on the advisability of at once going ahead with a building on the property recently acquired by the Association on the corner of McDermott avenue east and Rorie street.

WITH ANOTHER FIRM.

Mr. John W. Richardson, who for some time has been acting as assistant to Mr. St. Arnaud, manager of the Canada Hardware Co., has left that company to take a position with Caverhill, Learmont & Co. In his new place Mr. Richardson will look after the catalogue work, as well as keeping the travellers posted while on the road and other duties. HARDWARE AND METAL wishes him every success in his new position.

A BIG CONTRACT.

Rhodes, Curry & Co., Limited, Amherst, N.S., have been very busy during the past year, and, if a good start goes for anything, they are going to have just as much or more to do in 1903. They are now completing an order for the Canadian Pacific Railway placed in the spring for 1,100 box cars, and have just received an additional contract for 100 refrigerator cars, 10 first-class coaches and 300 flats.

Hot Water Boiler and its ultimate perfecting have contributed largely to our fame as Heating Experts.

The **"ECONOMY"** Hot Water Boiler is made along sensible lines—constructed absolutely without bolts or packing—easy to put together—means satisfaction to the tenant, because it works steadily and burns little fuel.

Write for a new and attractive booklet on this system.

J. F. Pease Furnace Co., Limited,

Head Office, 189-193 Queen St. East, - TORONTO.

FOUNDED 25 YEARS AGO.

ON Saturday evening, December 27, the firm of Emerson & Fisher, wholesale hardware merchants, St. John, N.B., entertained their employes at a dinner in White's restaurant. The occasion was the 25th anniversary of the founding of the firm. The large dining-hall was prettily decorated, and between 50 and 60 persons sat down to dinner.

Something entirely new and original was the menu card. It was designed to represent a kitchen range, while the menu was most appropriately concealed "in the oven." A scarf pin in the form of a tiny silver wishbone fastened the oven door, and upon this being withdrawn the list of solids and delicacies came to view. The scarf pins were retained as favors by the guests.

When the menu had been properly discussed, T. A. Graham, on behalf of the whole staff, presented the members of the firm with handsome bronze statues, expressing at the same time the esteem in which they were held by the employes. Both Mr. Emerson and Mr. Fisher responded briefly, and spoke of the pleasant connections existing between themselves and the men. Other speeches were made by the men, and during the evening instrumental solos were rendered by F. W. McNichol and S. Sweeney.

The firm of Emerson & Fisher will, about the middle of January, entertain their Sackville employes of the Enterprise Foundry in a similar manner.

The growth of the business of this firm during the last quarter of a century has been continuous, and both members have been active in all movements for the advancement of the welfare of St. John.

SENATOR PRIMROSE DEAD.

Senator Primrose, of Primrose Bros., one of the most progressive shipping, milling and manufacturing firms of Nova Scotia, died at his home in Pictou, N.S., last week, after only a few days' illness. Besides being energetic in business the deceased gentleman took a great interest in educational matters, and was president for some time of the Pictou Academy Alumni Association. He was also for many years president of the Pictou Y.M.C.A. He was also active in Conservative political matters, and was raised to the Senate in 1892.

STOCK-TAKING SEASON.

As the season for stock-taking approaches the dealer naturally desires to turn as much of his stock into cash as possible. Care, however, must be exercised that stock is not run so low that trade will be sacrificed. Every dealer has the satisfaction of knowing that whatever stock he may carry of Boeckh's brushes and brooms and Cane's woodenware, it is always worth its face value at stock-taking time. No writing off 25 per cent. for depreciation of stock, because no better goods can be procured anywhere.

PRICES OF BABBITT METAL.

The Canada Metal Co., Toronto, are now making their quotations on babbitt metal as follows: "Imperial," genuine, 40c.; "Metallic," 30c.; "Hercules," 20c.; "Star," 15c.; No. 1, 12c.; No. 2, 10c.; No. 3, 6c.; No. 4, 5c.

A NEW LIST ON SCYTHES.

A new list has been published on scythes, which shows an advance of 50c. over last year's prices. The net prices are as follows: Cast steel, $5.50; "Clippers," $6.50; concave, $7; "Climax," $7; "Excelsior," $7.50; single head, $6.75; double head, $7.25; cast steel cradle, $8.50; silver steel cradle, $9.50; lawn scythes, $5.50; bush scythes, $6.50.

PERSONAL MENTION

Mr. Dingman, assistant buyer for Moore & Brown, Sault Ste. Marie, Ont., we are glad to hear, is on the way toward recovery from his severe illness.

Mr. Jos. R. Henderson, of Halifax, N.S., President of Henderson & Potts Co., Limited, Montreal, has returned from a trip to England. He was in Montreal on Monday last.

Mr. E. McDougall, formerly with the James Smart Manufacturing Co., Brockville, Ont., commenced the first of this month to represent the Canada Hardware Co. in Eastern Ontario.

Mr. A. D. Leblanc, who has been in the sample-room of the Canada Hardware Co. for some time, will start out at an early date to represent the company through the lower parts.

GREENING WIRE CO'S. CALENDAR.

The B. Greening Wire Co., Limited, Hamilton, are sending out their 1903 calendar, which is worthy of a place in any office, where its large size will make it especially useful for reading from a distance, draw attention to their recent improvements as follows:

"You will notice from the cut of our works the very large additions we have made to our buildings. This has enabled us to greatly extend our plant and machinery, and the improved facilities we now enjoy will enable us to fill all orders promptly. We are now settled in our new and commodious offices, and hope with the additions we have made to our staff and the increased facilities afforded, to give satisfactory and prompt attention to all business we are favored with."

RULES FOR CONDUCTING BUSINESS.

We have published every now and then rules for conducting business. New ideas are coming forward every day, and some of the new rules are simply old ones dressed over. The Haberdasher recently published the following:

The man that runs his shop on modern lines never allows his assistants:

To insist that a customer take something he does not want.

To persist in trying to sell goods no one wants.

To rush a customer as soon as he enter the place.

To be familiar with patrons.

To stand in the doorway.

To assemble in groups and pass the "cup of scandal."

To "knock" one another.

To do more than their share or less than their share of the work.

To make it difficult for a customer to exchange goods.

To recommend anything to customers that is not just what it is represented to be.

To keep customers waiting one second longer than it is necessary for change.

To give all their attention to easy sellers.

To keep their showcases in bad condition.

To chew gum or tobacco.

To get tired with testy customers.

Or flirtations with female ones.

To imagine that their services are indispensable.

Or that they are the whole establishment.

To forget to do what they promised.

To be either shabby or dirty.

To be ignorant of the values of goods.

Or to talk about things they do not understand.

To accept gifts from wholesalers.

To take presents for pushing goods.

To attend to social affairs during business hours.

To "knock" other establishments.

To talk about events of the day with customers.

HARDWARE FOR KING EDWARD HOTEL.

HARDWARE AND METAL was in error last week in saying that The Belleville Hardware Co., Limited, had supplied the hardware for the King Edward Hotel, Toronto.

PARTNERSHIP IN BUSINESS.

A Paper Read to the Members of the Ottawa Retail Grocers' Association, by Mr. Chas. J. Provost, President.

PARTNERSHIP in business is in my opinion conducive to success, but while holding that opinion I am open to conviction, hence my reason for bringing this subject before you for discussion.

Most of you are aware that I have carried on business both as an associate member of a firm as well as an individual one, and with such experience I feel that I can speak on this matter with more or less practical knowledge. My intention is not to dwell on this important subject at any great length, but to point out in a condensed form what I believe to be

SOME ADVANTAGES OF PARTNERSHIP,

trusting it will bring forth a discussion which will be of benefit to the Association. I feel assured that you will debate intelligently and more clearly than I can.

After giving the subject particular attention and study, I came to the conclusion that partnership possesses, among other things, the following advantages :

It promotes a friendly rivalry ; it is an incentive to greater effort ; it prevents hasty conclusions ; it simplifies difficult problems ; it promotes good judgment ; it is the means of bringing new and useful ideas to the front at all times.

NEED FOR CONSULTATION.

Those who conduct a business individually will agree with me when I say that hardly a day passes but we have reason to consult some of our clerks on one or more of the many questions with which we have to deal. It may be in reference to the opening of a new account or the closing of others, or in regard to purchases we are about to make or the improvements of some part of our commercial system.

Upon this and many other matters we naturally seek the advice of our employes, whom we suppose to be interested in our welfare. Is it always consistent to do so? Is the clerk whose whole time is devoted to attending to the numerous details connected with a clerk's duties prepared to advise? I say, no.

One must think before he can advise, but to think requires time, and this the clerk is often denied ; or is it reasonable to expect an employe to spend his leisure hours in devising new schemes or doing part of the thinking for his employer? Will a man work with the same zeal and interest when not working for himself? Then, again, employes as a rule are

NOT DISPOSED

to bring forward new projects or tender advice unsolicited, although they might in many instances prove profitable, for fear that they will not meet with approval or that their advice will not be appreciated. It is different with a partner, who assumes the same amount of responsibility, whose interests are identical to yours. Self pride guides him in his words and actions. A great deal can be learned by exchanging ideas and by comparing notes with a partner. His advice is of great assistance in arriving at a decision.

PARTNERSHIP PROMOTES AMBITION.

Experience has taught me that partnership promotes ambition and tends to prolong the activity so essential to the success of any business ; it expels dullness, which often appears, because a man who is in business alone it satisfied with what he does himself ; it is also clearly proven to me that to be and remain partners in business the spirit of acquiescence should be cultivated, and must of necessity be the prevailing spirit between members of a firm.

HOW TO CHOOSE A PARTNER.

I might mention before closing, one idea I have as to how to choose a partner. I have referred to the clerk in the store as hardly the right person to expect advice from. I do not hesitate in saying that where it is at all possible merchants should hold out the offer of partnership in their business to clerks as inducements for faithful service. There are many clerks who possess the necessary qualifications to become successful merchants.

CLERKS EXPECT TO GO INTO BUSINESS.

The clerk who has ability naturally expects to go into business for himself. When the time arrives that he can realize his ambition he, as a rule, begins business where he is acquainted. And here is where an employer is likely to suffer most. I don't mean to say that every clerk can be considered for partnership, but if you are in business alone I claim partnership is better, and a good clerk who has proven a faithful servant is the first choice as an associate member.

I shall not dwell any further on this very important question, but hope when it comes up for discussion that, all things considered, the ideas brought out shall be of some benefit to the members of this Association.

THE "IDEAL" CUSHION PAD.

THE many accidents to horses, particularly in the cities, during the last few weeks, has done much to arouse interest in the cushion horseshoe pads manufactured by The Dunlop Tire Co., Limited, Toronto. The "Ideal" seems to meet with most general favor. This pad can be used with a toe calk and is particularly adapted for fall and winter use. It prevents slipping, concussion,

sore and strained tendons, etc. That part which comes in immediate contact with the hoof is made of 12 or more plys of frictioned-cotton duck, put together under 2,000 lb. hydraulic pressure. It is, therefore, not so heating as either leather or rubber and will hold the nails better than either. Having no stitching to cut into, it can be readily attached and trimmed to the varying shapes of horses' feet. Hardware dealers who handle blacksmithing goods should stock "Ideal" cushion pads.

R. C. Brumpton, general merchant, of Red Deer, N.W.T., has sold out to Ouimette & Wallace, who take possession on February 15.

A CORNER FOR CLERKS.

MEN of great achievement are characterized by their ability to grasp situations quickly and to seize opportunities, says a writer in Success. Their vision is clear; they understand conditions thoroughly; they act without hesitancy or doubt of results; hence, in most instances, they carry their purposes to a successful issue.

Those who accomplish great things do not do so by unusual straining or an exhausting output of mental or physical energy. J. Pierpont Morgan, for example, in the execution of his colossal schemes, does not seem to exert any great effort. He achieves his ends with apparent ease because of the lucidity of his ideas and his strong grasp upon situations.

The steel tools driven by the great cams in our shipbuilding yards go through solid steel plates with as much ease, seemingly, as the fingers of a cook go through yielding dough, because of the huge balance wheels whose mighty momentum, without jarring or straining, overcomes all obstacles. So, great workers compass vast results by the momentum of their intellects, their clear comprehension of conditions, and their ready mastery of complicated situations.

Such minds as these are self-contained, self-reliant, confident. They do not buttonhole every friend or acquaintaince they chance to meet, and ask his advice or opinion in regard to their plans. They do not consult subordinates or equals; they simply look over the ground and study it carefully, as a skillful general studies his plan of the battleground before he leads his army to action, and then they act.

A noticeable example of this stamp of mind is General Kitchener, one of the most remarkable personalities of our time. Silent, stern, immovable, when a purpose is once formed, this hero of many hard-won battles is a sphinx-like type of concentrated power. He forms his plans unaided and executes them with the precision and force of a huge engine. His chief of staff was the only one who knew anything of his intended movements when he started one day on an important expedition during the recent war in South Africa. He simply ordered a locomotive, a guard van, and a carload of "Tommies." Orders were given to clear the track. Everything had to stand aside for him. No warning was allowed to be telegraphed ahead. He arrived on the spot without previous notice, and no general in the army knew when or where he might appear.

Another incident of his South-African campaign is strikingly characteristic of the man. About six o'clock one morning he paid an unheralded visit to the Mount Nelson Hotel, Cape Town, scanned the register, and found there the names of officers who should have been on duty. Without a word to anyone, he went personally to the rooms of the offenders and left the following notice: "A special train leaves for the front at 10 a.m.; the troopship leaves at 4 p.m. for England; you have your choice, sir." He would listen to no excuses, no parleying, no apologizing; that was his ultimatum, and every officer knew what he meant.

He wields an absolute power over those under him, because of his positiveness, his self-possession, his consciousness of being equal to any emergency, whatever it may be. Everything about him is indicative of strength, largeness, and breadth of make-up. Free from petty vanity or any desire for praise or flattery, he has a frank contempt for all social distinctions and frivolities. His personality has all the impressiveness of some great natural force, working out its purpose silently, effectively, and with the certainty of doom.

The conquering General is not an endearing character, it is true, his subordinates fearing rather than loving him; neither is he, any more than that other forceful character, J. Pierpont Morgan, a model type of man in every respect; but both men possess in an eminent degree those qualities of self-confidence, concentration, firmness, promptness, decision and ability to grasp sitkations which everyone who would be successful must cultivate, the measure of one's success and ability to grasp situations which he develops these indispensable qualities.

Men who have a wide grasp of intellect and firmness of decision are always positive. They know what they want and are never on the fence. They do not waste their time shilly-shallying, seeking advice, balancing opinions, or splitting hairs. They decide upon a course of action, and then pursue it without hesitation or wavering.

WRITING ADVERTISEMENTS.

While there is no particular virtue in writing an advertisement on a milk-and-water plan, neither is there anything gained by giving it so much enthusiasm that it will fairly consume itself. Folks rather like to supply some of the information themselves. It is human nature for the average reader to give a fact, plainly put, a coating of extra strength in his own mind. When a man reads an advertisement that strains and does its level best to convince him, that man generally takes it with a pinch of salt. He would not be human if he were otherwise. But, if the advertisement is laid along dispassionate lines, giving its arguments calmly and truthfully, without undue agitation, the reader does not feel called upon to argue against it, because the feeling does not lay hold of him that that advertisement is working to win him over in spite of himself.

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

"The Year has gone—let it go!"

The Old Year

with all its happiness and sadness, its fulfilments and disappointments its gains and its losses, is gone.

The New Year

fraught with limitless possibilities, hopes and ambitions, is at hand.

May *your* coming year make your possibilities actual facts; may *your* hopes and *your* ambitions be realized; may health and happiness be *yours*, and may *you* appreciate, as never before, the trade-getting qualities and personal service of

The P. R. Cumming Manufacturing Co.,
LIMITED.

NO. 22.

No. 33 (double blade) is similar in construction and finish.

Something New!

THIS is an entirely new style of mincing knife of our own design. The shank is a flat tinned steel band, drawn tightly into a groove encircling the handle, the blade being riveted between the ends. This construction does away with any hole in the handle, which consequently cannot split or come loose. The handle itself is stained and shellacked, the whole making the neatest and strongest mincing knife ever put on the market.

MADE ONLY BY **The P. R. Cumming Manufacturing Co., Limited, Clarksburg, Ont.**

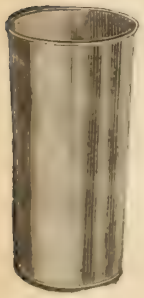
BIRMINGHAM, ENGLAND.

Supplies for the Maple Syrup Season.

Sap Buckets . . .



—EXTRA DEEP AND STRAIGHT.
—THREE SIZES.

They possess many advantages over the ordinary flaring Buckets—being small in diameter they do not catch the rain or snow, and as they are very deep, they hang perpendicularly, and consequently will not overflow until full.

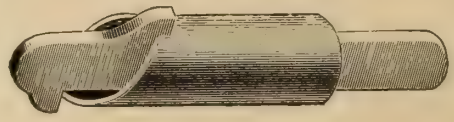
—Covers supplied if required.
—They nest close for shipping or storing.

We can also supply the ordinary Flaring or Western Sap Pails.

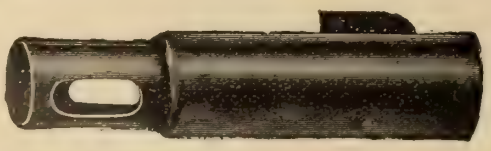
E. T. Sap Spouts.

MADE OF RETINNED STEEL—STRONG AND DURABLE.

Only require a ⅜-in. hole in tree.
It does not cover the inside surface of the hole; therefore a larger amount of sap is obtained.
Packed in card-board boxes.



Maple Leaf Sap Spouts.



Made in Bronzed Steel.
Require a ½-in. hole.
Has a shoulder which prevents it being driven in too far.
The hole in the tree is not exposed to wind and snow; consequently, sap will flow longer.
Packed in card-board boxes.

Syrup Cans, round or square.

Plain or decorated. Made in ¼, ½, and 1 gallon sizes.
Either Wine or Imperial Measure.

A full stock carried in all lines; orders shipped promptly.

TO INTERVIEW THE GOVERNMENT.

BRITISH-COLUMBIAN men interested in lead mining are commencing to take decisive steps toward obtaining from the Canadian Government some protection for the industry of their Province. Messrs. John L. Retallack, chairman of the Lead and Silver Miners' Association, G. O. Buchanan, representing the Kootenay Boards of Trade, and Geo. D. Potter and George Alexander, of the Lead Miners' Committee, are on their way to interview the paint manufacturers and other large consumers of lead in Ontario, Quebec and the Eastern Provinces, with a view to securing their interest, and, perhaps, co-operation in the project. They will meet in Montreal on January 20. Afterwards they will wait on the Dominion Government, and petition them to make some change in the tariff which will benefit the British-Columbian lead-mining industry. An increase in the duty on pig lead is, of course, the primary object.

These Western gentlemen are likely to meet with a favorable reception from most manufacturers in the east. The subject of lead mining has come up before them in a casual way more than once recently, and a general feeling of sympathy with those engaged in that industry in the Pacific Province seems to be prevalent. Whether their suggestions will meet with a like response from members of the Government is another question.

The duty on pig lead from the United States is now 15 per cent., and on white and red lead, 5 per cent. The disposition, however, of influential supporters of the present Government is to regard all such proposed legislation on behalf of so comparatively small an industry as is lead mining in Canada as merely a sort of bonus system by which certain promoters are aided by public money to keep in operation a business that could not possibly be put on a paying basis. This sentiment has already been given utterance to by some strong friends of the party in power in regard to the lead-mining industry; and when opposition is announced at this early stage we cannot expect an easy path for the British-Columbian mining men.

SPORTING GOODS TRADE.

HARDWAREMEN should do the bulk of the sporting goods trade of their towns. So many of these lines are handled exclusively by the hardware trade that it would be easy to make sporting goods a feature, and so secure a thorough connection with all clubs and organizations, as well as private parties, using these goods, either indoors or in the open.

To do this most successfully, a study of the trade should be made, either by the proprietor or by some clerk who is old enough and who has sufficient tact to look after this line. Catalogues should be secured from the leading houses, and these should be examined from cover to cover carefully and often. Most lines should be stocked, but where this is not practical, it will be found easy in many cases to sell direct from the catalogue.

In this connection some hardwaremen make the mistake of using too prominently the catalogues of houses which sell by mail order direct to users of sporting goods, either to clubs or private individuals. While it may be well to have catalogues from such houses, it would be wise to patronize them as little as possible. It would rather be good policy to make the claim that, having a connection with the leading manufacturers and jobbing houses, you are in a better position to supply local clubs or persons than any outside retailer or mail-order house would be. This claim, combined with personal acquaintance and businesslike methods, should enable the local trade to keep the mail-order houses almost entirely out of the field. The sporting goods trade is profitable, and well worth the study and work necessary to obtain it.

CANADA'S COMMERCIAL POSITION.

THE new year in Canada starts its career under most favorable conditions. Without being charged with exaggeration we believe we can safely say that at the beginning of no previous year in the history of the country have the conditions been, on the whole, so promising.

The best criterion of a country's position is not its territorial expansion, or the number of square miles that are within its boundaries.

It is the measure of its commercial prosperity and the possibilities of its natural resources that are the best indications. And it is herein that lies the strength of Canada's position to-day.

While there has been a marked development in the manufacturing industries of Canada during the last few years, agriculture is the foundation of her industrial life. And in this respect the conditions are gratifying indeed. In Manitoba, in the Northwest Territories and in New Ontario, 1902 saw a development of agricultural interests not only in excess of expectations, but far and beyond the record of any previous year.

Manitoba and the Northwest Territories yielded 125,000,000 bushels of grain, of which nearly 68,000,000 bushels were wheat.

In Manitoba the yield of wheat has increased nearly 4,000 per cent. in 10 years, while the aggregate value of the grain, the roots, the live stock and the dairy products of the Province in 1902 is estimated at nearly $44,400,000. For a population of a little over 500,000 this is a most creditable showing. And during an interview a few weeks ago, ex-Premier Greenway ventured the opinion that 1903 would witness an increase of 25 per cent. in the crop production of Manitoba and 100 per cent. in that of the Northwest Territories. A short time ago the United States Consul at Winnipeg, in a report submitted to Washington, declared that "three-fourths of the wheat lands of North America lie north of the boundary line."

According to an official statement issued at Ottawa a few weeks ago, 56,000 people from outside countries settled in Manitoba and the Northwest during 11 months ending November last. And about 31,500 of these were from the United States. This year everything points to a still greater influx, especially from the United States.

The old Province of Ontario more than sustained its reputation last year for the variety and wealth of its agricultural products, producing 166,861,653 bush. of grain, against 139,678,398 bush. in 1901. Of the total, 26,121,693 bush. were wheat and 106,431,439 bush. were oats.

A well-founded belief obtains in the world that nations to be commercially important must have a well-developed iron industry. Without discussing the soundness of this premise, it is a fact beyond dispute that 1902 witnessed a marked development of the iron and steel industry in this country. In fact, in every branch of the manufacturing industry, Canada made substantial strides during the year which has just departed.

The export trade in manufactured goods increased by over $3,000,000 last year, while the export trade of the country, in merchandise generally, grew from $194,509,143 in 1901, to $209,970,864 in 1902.

Our foreign trade is now well on the way to the half billion mark, being $423,910,444, of which $211,640,286 were exports and $212,270,158 imports. Our export trade alone is now about $7,000,000 larger than the imports and exports combined of 13 years ago. According to the latest returns for the present fiscal year, the foreign trade of the country for 1903 bids fair to be much larger than that of 1902, both in regard to exports and imports.

But the foreign trade of a country is not always the best indication of its prosperity. Frequently the export trade, for example, may be stimulated by the lack of demand at home, as it was during the depression in the United States a few years ago. But that the export trade of Canada is not forced by any such influence is evident from the difficulty manufacturers and others are experiencing in supplying the demand of the home market.

That, however, is not the only test. There is the corroborative evidence of the railway earnings and the bank clearings, both of which show large increases over the previous year.

Five or six years ago it was felt that Canada was building railways faster than she required them. But what are the conditions to-day? Simply that the industrial development of the country has far outstripped its transportation facilities. And in every part of the country—in the other portions as well as in the Great West—there is an absolute blockade. If by some mysterious agency it were possible to suddenly double the transportation facilities of the railways, there would be no more than a sufficiency for to-day's requirements. And new lines are being built and old ones double-tracked and otherwise being equipped to meet the actual requirements of the commercial demands of the country.

Canada enters upon 1903 with even brighter prospects before her than when she entered 1902. And certainly in no country are the commercial prospects more assuring.

When a merchant hasn't time to stop and think, it is evident his business is running away with him.

THE CANADIAN CEMENT INDUSTRY.

A TORONTO daily newspaper points out that while the consumption of cement in Canada last year was but 2,200,000 barrels, it is estimated that 3,500,000 barrels per year will be produced before long. Then it adds: "The pessimists believe that things in this line will be something like what they are in Germany, where at present the cement market is much congested, and the product is being sold at below the cost of manufacture, producing a condition of industrial distress that is widely felt throughout the Fatherland."

It would be interesting to learn who the pessimists are, and why they are so timid as to the future of the cement industry in this country. We are afraid the pessimists referred to are some of the "lambs" of speculative circles who are looking for a good chance to "get in on the ground floor" on some gilt-edged investment, but

who are too ignorant of the real conditions to know how to invest their money.

Those who are intimate with the cement trade are not likely to be frightened by the stock market reports. For the benefit of the timid who may be seeking the truth we would refer them to the report of the Ontario Bureau of Mines for 1902, some extracts from which we reproduce below: "The employment of cement has of late years been extending in a multitude of directions, and it has been found capable of satisfactorily replacing not only clay products and stone, but also wood and iron for many purposes. In almost every variety of public works, such as canals, dams, breakwaters, piers, bridges, conduits, etc., cement plays a highly important part, and in the composition of buildings it is no longer restricted to foundations or floors, but finds much favor with architects, especially in large modern steel and iron structures, as a substance for embedding beams and girders to give additional strength, prevent oxidation, and guard against the destructive effects of warping in case of fire. * * * For roofing tiles, sewer pipes, culverts, for decorative and art purposes, for the manufacture of hollow building blocks to take the place of brick or stone, for the foundation of bank barns and for a hundred other uses cement is rapidly winning its way."

What is the result of this remarkable development? In 1891 the total production of cement in Ontario was but 48,211 barrels; in 1901 it had risen to 489,288 barrels; official figures for 1902 are not yet given, but our contemporary places the production in the Dominion at 1,400,000 barrels (in all probability an excessive figure). Yet, and in spite of the big importation, prices were well maintained all year.

It is safe to say that the Canadian cement industry has just started on an era of expansion that is not likely to suffer from overproduction for a few years yet, even if the many companies proposed come into active industrial being. The business may be overdone, but it will not be for a few years yet.

CIRCULARS A WASTE OF MONEY.

THE shrewdest and most experienced advertisers the world over have decided against the use of the circular as a profitable advertising medium. Marshall Field, of Chicago, probably the most successful merchant in the world, and the most successful advertiser, says: "One advertisement in one good paper is worth a hundred circulars and costs far less."

Some inexperienced advertisers still make use of the circular by which to convey their message to the buying public. In placing their orders for, say, 2,000 circulars, they only have in their mind the first cost of printing, which may be some $6, or perhaps $8, for the cheapest that any good house would care to use. Generally they cost many times this figure for something special to attract attention. They do not at the time consider the cost of the envelopes and the addressing of the same, or the cost of postage, which is the largest item of all.

Say a business firm places an order for 2,000 circulars costing $8. The envelopes are worth $1.50 per 1,000, or $3 for 2,000, the cost of addressing them is worth $2 per 1,000 or $4 for 2,000. If a 1c. stamp be used it means $20 for stamps, and the recipient knowing it to be a circular, from the fact that there is only a 1c. stamp on the envelope, often casts it in the waste basket unopened. On the other hand, if a 2c. stamp on each envelope be used, the cost of postage is $40, this added to the cost of the printing, the cost of envelopes and addressing of same, brings the total cost of sending out 2,000 circulars just $55.

What impression does a circular make on the manager of a large business house, who may, perhaps, receive a dozen or so in his morning mail? He may give each a passing glance, or if he should happen to be busy he may cast them all in the waste basket. He never thinks of putting a circular on file for reference. At the best he may read it over, then go and attend to his many other duties without ever giving it a thought afterwards.

Ninety-nine times out of a hundred this is the way the circular is treated. But if a merchant be a retailer and desire to reach the many and places his advertisement in the daily newspaper it will not cost him anything like $55, and he will reach not only 2,000 readers, but perhaps 20,000 or 30,000 readers.

If the merchant be a wholesaler, manufacturer or jobber, and he places his message in a reputable bona-fide trade journal, he can for a great deal less than $55 reach three, yes, four times as many readers than he could by his 2,000 circulars. Then there is still another phase to the question. The circular looks cheap and belittles the standing of a good reliable house. On the other hand, an advertisement well written and well set up appearing in a publication of standing and known merit, carries with it an air of confidence and respect which no circular, no matter how tastefully it may be gotten up, can hope to carry.

The circular is a back number in modern advertising methods, and good advertisers have discarded its use as a relic of back ages in good advertising, as being more expensive and less effective.

DEPARTMENTAL STORES AND NEWSPAPERS.

CONSIDERABLE comment has been caused in the trade by the purchase of The Toronto Daily News by Mr. J. W. Flavelle, of The Wm. Davies Meat Packing Co. Mr. Flavelle is the principal proprietor of The Robert Simpson Company, one of the largest retail departmental stores in Canada, and also of about thirty retail provision stores in Toronto and some outlying towns.

The control of a daily newspaper by a departmental store proprietor who is a large advertiser is not entirely new, even in Canada. Mr. Timothy Eaton, of The T. Eaton Company, is, with Sir William Mulock, Postmaster-General, the proprietor of The Toronto Daily Star. In the United States quite a number of departmental store men are owners of or hold a large interest in daily newspapers.

Jordan, Marsh & Co., Boston, have a half interest in The Daily Globe of that city. Wanamaker, Philadelphia, and Marshall Field, Chicago, each practically own a daily paper. The Mohican Company, which have a chain of retail stores, own daily papers in New York, Boston and Washington.

As it is good policy to follow the lead of successful men, no doubt others will do as Mr. Flavelle has done. Mr. Flavelle began his business career in a retail general store with his uncle, the late Mr. Dundas, M.P., in Lindsay, and has gradually worked himself up, and to-day, though a young man, he is one of the wealthiest men in Canada. He is a man of unusually high character, and, though he has made many enemies in the retail trade by his competition, yet, all hold him in the highest respect. The latter may also truthfully be said of his two associates in the newspaper venture, Mr. Willison and Mr. Colquhoun.

THE C.I.F. QUESTION—AN AUSTRALIAN VIEW.

AUSTRALASIAN HARDWARE.

THE face meaning of this commercial formula is matter of common knowledge in the business world, but its exact significance is not so well understood. Goods c.i.f. are goods sold at a price which covers insurance and freight to the port named. So much we all know. The questions arise, however, what, in such transactions, should be the character of the insurance effected, and when the seller's responsibility ceases and the purchaser's begins?

Recently a discussion took place in the columns of a Canadian contemporary on these points. A firm bought "c. i. f. Montreal" from the agent of a British house certain goods, which arrived in a rusty and unsaleable condition. The consignee held that the goods should have been insured to cover such loss, and cast the responsibility on the consignors. Their agent, on the other hand, maintained that the contract only called for ordinary insurance, and that his firm was consequently not liable. The opinion of leading business and professional men was taken on the subject, and, while there was a difference of view as to the actual import of the term "c.i.f.," there was practical unanimity that the shippers in the case cited were not at fault. A "member of the bar," and an insurance expert, agreed with several commercial men in this view. In the ordinary course, they maintained, the seller's responsibility was at an end when he had covered the shipment with the kind and amount of insurance usually placed on goods of similar character. If the purchaser had not stipulated for a special policy covering the loss complained of he must put up with the consequences. At any rate, the matter was one between him and the underwriters.

As to the time when the risk passes from the one party to the other, a "wholesale grocer" thinks the seller "ought to be" responsible until the goods are actually in the hands of the purchaser, but he firmly feels there is no hope of this position being legally maintained, and has had so much trouble with insurance men "at the other end" that, instead of buying c.i.f. he buys c. and f., and has the insurance looked after by a local agent. "A prominent grain merchant" says without any misgiving, that in all c.i.f. transactions "delivery under the contract takes place where the shipment is actually made and the invoice rendered. As soon as the goods leave my hands they are in possession of the consignee, and because he has signed the contract, losses in transit, if there be any, must be borne by him."

We have been at pains to consult those qualified to speak on the subject here, with a somewhat similar result. A legal practitioner says it is not quite clear when goods sold c.i.f. become the property of the purchaser. The better opinion seems to be, he adds, however, that the seller's risk ends on shipment, and that for any damage sustained in transit the purchaser would have to recover from the insurance people concerned. Long experience has convinced a leading hardware merchant that "the liability of the seller ceases with the shipment of the goods and the transfer of the bill of lading (always provided the same is perfectly clean) and insurance policy. The purchaser of a c.i.f. consignment is thus put in exactly the same position as if he had purchased f.o.b. at port of shipment, and I think this is looked upon as the recognized usage by most importers. Some of the selling houses make this quite clear in their contracts of sale by inserting a clause to this effect: 'Where goods sold c.i.f. are not bought by sellers f.o.b. at shipping port, the buyer's risk of condition commences at works.'" Another gentleman of large and long hardware experience says: "The custom of our trade, so far as I have any knowledge of it, is for the risk on c.i.f. purchases to be borne by the purchaser after shipment has been made. All the jute and oil business with Calcutta is done on this basis, and I have never heard of the exporting houses carrying any risk after shipment. Messrs. —— and ——, who are agents for large Calcutta exporters, have had disputes with their customers on this very subject, and in each instance, I believe, the settlement has been effected in accordance with the views which I have expressed." Appealed to on the subject, one of the firms named makes the following statement: "The shipper receives payment usually at the port of shipment by drawing upon London under a bank letter of credit provided by the buyer. The latter is the owner of the goods as soon as the bill of lading is parted with by the shipper, irrespective of whether payment is as above or by any other arrangement. Should the goods be drawn for, say, at 60 days' sight, upon the buyer, and the buyer declines to accept, he cannot escape the costs the holder of the bill is put to in realizing moneys to meet same [illegible] from the goods and second from the buyer."

WILL COVER CENTRAL ONTARIO.

E. W. Rawson, who has for some years been in charge of the sales department of the McClary Manufacturing Co., Toronto, has been appointed traveller for the company in the Central Ontario district, to succeed W. E. Bulmer, who represented the company for several years. Mr. Rawson starts on the road next week, and, as he is a progressive, energetic young man, he should receive a warm welcome from the trade.

CHAT

Considerable thought has been given by The Dominion Coal Company to the building of a coke oven at Montreal to supply the city with the coal gas by-product.

Sutherland & Stelck, hardware merchants, of Dauphin, have secured temporary quarters for their business after the recent fire, and next spring will erect a commodious new building.

One of the best-known residents of North Sydney, N.S., W. H. Moore, died in the early morning of December 27. The deceased was a large shipowner, and for many years carried on a large business at that place.

E. McDougall, who has been on the travellers' staff of The Smart Manufacturing Company for the past seven years, will now travel for The Canada Hardware Company, of Montreal. His district will be from Cornwall, Ont., to Pictou, N.S.

F. Rogers' coal and wood yard on Queen street west, Toronto, suffered damages by fire to the extent of $300 on the 3rd inst. The prompt work of the firemen prevented the fire from spreading to the large lumber piles in the adjacent yards.

E. V. Tanner, perceiving the needs of our western country, has a feasable proposition to manufacture straw fuel, and believes that he can supply inexpensive machines for the purpose. The straw will be packed in somewhat the shape of cordwood, and will make splendid fuel he claims.

CATALOGUES, BOOKLETS, ETC.

ICE TOOLS.

WM. T. WOOD & CO., manufacturers of fine quality ice tools, Arlington, Mass., are sending out to the trade an illustrated catalogue of their goods. This firm make every form of ice tool imaginable, from ice cultivators, ploughs, breakers, etc., to ice chisels, tongs and saws. The lines of tools carried by this firm are complete, and any merchant desiring to lay in a store of ice tools will find nearly everything made in that line listed in this catalogue. Mention HARDWARE AND METAL when writing.

A CALENDAR FOR SIX CENTS.

Harrington & Richardson Arms Co., Worcester, Mass., upon receipt of six cents, will forward one of their fine calendars for 1903 to any of our readers who mention HARDWARE AND METAL.

A RETAILER'S CALENDAR.

Frs. Martineau, hardware dealer, 1379-1385 St. Catherine street, Montreal, has issued a well designed and lithographed calendar for 1903. It is in French. The design represents the three branches of Mr. Martineau's business, hardware, wall papers and paints.

HANDY REFERENCE ANNUAL.

Seven years ago The Dominion Brewery Co., Limited, Toronto, of which Wm. Ross is manager, issued to their friends a vest-pocket reference annual. This year another of the series has been issued, and, like its predecessors, is replete with useful information on sporting events and records; rates of postage, etc.

THE TWO FAMILIES.

One of the prettiest and most interesting little calendars of the year is that issued by Carter Bros., retail hardware merchants, Picton, Ont. The picture is from a painting by O. Water, and is entitled "The Two Families." The one family is a mare and her colt and the other a fox hound and her litter of pups, with the two mothers in evident sympathy with each other.

"WHAT'S UP?"

Rogers, Toronto Junction, is another retail hardwareman who is distributing to his customers a pretty and striking calendar. The picture in this instance is also a reproduction in original colors of a masterpiece, "What's Up?" and shows three handsome setters in the foreground with a background of shrubbery in autumn garb. "Rogers' Hardware Store" is printed prominently on the face of the calendar and in a corner is this businesslike phrase: "We either carry it in stock, will get it for you, or it isn't made."

It's Worth a Great Deal

to be an agent for

THE SHERWIN-WILLIAMS PAINT

You are then handling the best paint that can be made. You are representing the largest paint-making concern in the world. You are also sharing in the best paint-selling methods and advertising.

There is money and business reputation in the agency. The Company has built up the most successful paint business in the world on the quality of its products and by straightforward business methods.

A stock of the Sherwin-Williams Paint on your shelves identifies you with the Company. The prestige of their success is yours.

The high quality of our products, backed up by a direct system of advertising in your behalf, brings only one result—a successful paint business for you—the largest in your locality.

Write to-day for our "B-13" booklet. Gives our proposition in detail.

THE SHERWIN-WILLIAMS CO.

PAINT AND VARNISH MAKERS.

CHICAGO, NEW YORK, NEWARK, MONTREAL, CLEVELAND, BOSTON, TORONTO, SAN FRANCISCO. KANSAS CITY.

"ARK BRAND" PAINT.

The Francis-Frost Co., Toronto, manufacturers of "Ark Brand" paint have issued one of the finest calendars of the year. The subject is a reproduction in well-blended colors of Angelo Aspi's famed painting "Babette." It is mounted on a heavy pebbled white background, and is a most handsome work.

LOCKS.

S. R. Slaymaker, Lancaster, Pa., has issued a handsome catalogue of his locks, which will be sent to the trade on application. It is profusely illustrated, with good clear engravings of the great variety of locks and keys which the firm makes. The binding and printing are both of the best. Alexander Gibb, Montreal, is the Canadian representative.

DANA AND CO., CINCINNATI.

The catalogue of Dana & Co., Cincinnati, of their Peerless Iceland Freezers is a booklet handsomely printed and engraved with cuts of the various patterns of freezers made by this firm. One of the advantages claimed for these freezers is their few parts and one motion alone. It is exceedingly simple to operate. Write them for their catalogue and mention HARDWARE AND METAL.

NORTH BROS. MFG. CO., PHILADELPHIA.

The North Bros. Mfg. Co. Philadelphia, have just issued a useful little illustrated catalogue of their ice cream freezers. In these freezers the patented automatic twin scrapers insure automatic, positive and continuous scraping of frozen cream from the sides of the can. The scrapers are hung on dasher so their lower ends rest on bottom of can, and the friction between ends of scrapers and can bottom, when in motion, moves the scrapers against side of can and holds them there positively and continuously. Two other special features are that the pails are made of cedar, with electric-welded wire hoops, which are guaranteed not to fall off or break, and the bottoms of the cans are drawn steel, which will not leak, break, or fall out of body of can. This firm also manufacture large size and machine freezers for hotels and restaurants. The last pages of the catalogue are filled with accessories, consisting of packing tubs and cans, ice breakers and chippers. Dealers handling these freezers will be furnished with circulars and electrotypes for advertising free of charge. For catalogue, address North Bros. Mfg. Co., Philadelphia, Pa.

IDEAS IN GETTING TRADE.

A PROGRESSIVE merchant is ever actively searching for ideas on how to increase his business. The Saint Paul Trade recently favored its readers with a few ideas in this line, from which we reproduce the following :

A clever Ohio merchant succeeded in attracting a great deal of attention to his store by offering a prize to the person who would write the words "Christmas Goods at Weber's" the greatest number of times upon the blank side of a postal card. It seems almost impossible, but the prize-winner succeeded in writing the sentence 5,012 times. The second prize contained the sentence 3,457 times, and was very plain and readable. The winner was a 15 year old boy, and the third prize was given to a clergyman. If the prizes given in this contest are attractive enough and the right kind of advertising is done, we see no reason why it should not prove very profitable to the merchant using it.

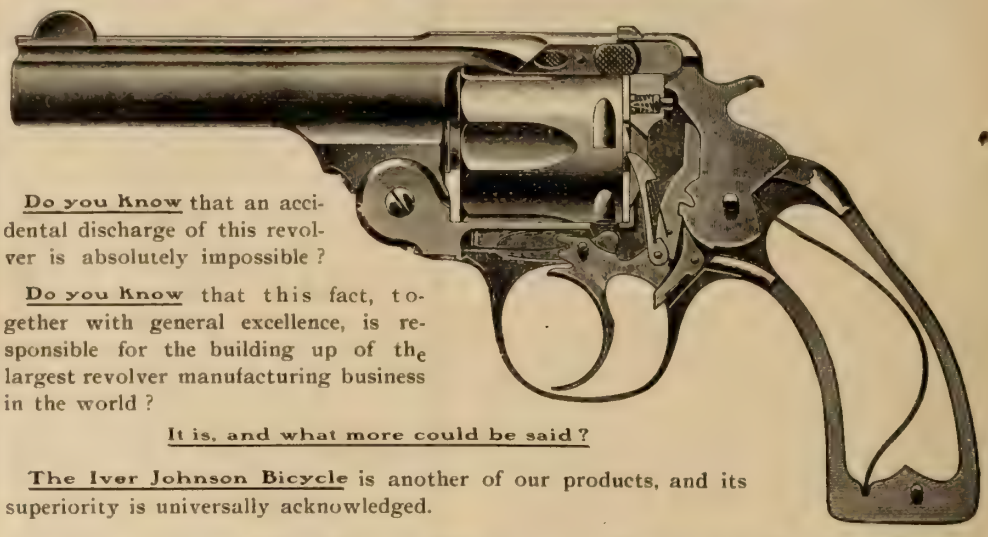
Here is an idea that is not altogether new, but is always effective. Fit up a lady's boudoir as it would be after "my lady's shopping tour. A wrap should be thrown carelessly over the back of a chair, one glove on the chair and another on the floor. On the bed and on the floor should be several packages, and "my lady" herself should be standing in front of the dresser removing her hat. Don't spoil this effect by trying to exhibit goods but indicate that the lady has been to your store to do her shopping by having all the packages wrapped in your printed paper.

This little plan may be used to good effect in small towns. Select from your stock a variety of articles, ranging in cost from 8 to 14 cents. Arrange these attractively on a table well to the front of your store, and in a box, close at hand, have several hundred envelopes, in each of which is a number, 5, 10 or 15. On a card explain to your trade that the things on the table are not for sale, that the envelopes in the box are for sale at a price not exceeding 15 cents. Then explain that the purchaser of an envelope is entitled to his choice of anything on the table for the price indicated on the ticket inside of the envelope. Some of these tickets are for 15 cents, some for 10 cents, and a few of them for 5 cents. You can proportion them so as not to have the numbers exceed the cost of the articles on the table, but be sure to have enough 5 cent cards in the envelopes to make the drawing interesting. You may, if you so choose, have one prize of a large doll or anything which is especially appropriate for that purpose, but, of course, the ticket entitling the purchaser to the doll will not be put among the envelopes until they are nearly sold.

WORTH KNOWING.

There is not a revolver made that possesses safety features equal to those to be found in every Automatic

IVER JOHNSON REVOLVER.



Do you Know that an accidental discharge of this revolver is absolutely impossible ?

Do you Know that this fact, together with general excellence, is responsible for the building up of the largest revolver manufacturing business in the world ?

It is, and what more could be said ?

The Iver Johnson Bicycle is another of our products, and its superiority is universally acknowledged.

MACHINERY AND ELECTRICAL SUPPLY DEPARTMENT

ELECTRICITY ON BRITISH RAILWAYS

At a recent meeting of the British Westinghouse Electric and Manufacturing Co., the principal portion of George Westinghouse's address was devoted to the possibilities of substituting electric traction for steam on local lines where regular and frequent traffic is necessary, says The Hardwareman. After saying that the orders in hand at the Manchester works included eight 5,500 K. W. turbines and generators for the Underground Electric Railways Co. of London, Limited, and the three 3,500 K. W. turbines and generators for the Metropolitan Railway, he went on to say that the rate of development of electric traction in Great Britain would depend largely upon the facility with which the required capital could be raised, the machinery constructed, and plants established. Since the last meeting several of the leading railway companies had taken action in regard to "electrification." The North-Eastern had already invited tenders for the equipment of about 45 miles of its lines in and about Newcastle. This company, instead of building its own plant for the manufacture of electricity, was proposing to take a supply from The Newcastle-on-Tyne Electric Supply Co., and this might be considered a precedent of importance. If there were at the present time a supply of current available along the lines of railways there would undoubtedly be a rapid development of electric traction upon branch lines which were now worked with little satisfaction to the public and at great cost to the railway companies. The Lancashire and Yorkshire Railway Co. had announced their intention to electrify their line between Liverpool and Southport, while the Great Eastern and the Brighton Companies had given notice of their intention to apply for Parliamentary powers for a similar purpose.

AN AUTOMATIC SWEEPER.

Of the many improvements that are to be added to the equipment of the King Edward hotel none are more remarkable than the apparatus designed to clean the carpets of the building. This broom will cost over $6,000, but those who have examined it state that even at that cost its installation would effect a great economy. The apparatus consists of a small machine in the cellar, two cylindrical separators, to which are attached pipes leading to the various floors. At each floor is a long hose with a T-shaped brass nozzle, with a thin slit running the full length of the head, which is quite flat. The machine is operated by steam furnished from the plant heating the building. Each stroke of the piston draws the air in a continuous stream through the nozzle, hose and pipe into the separator. The force of the suction is so great that not only is the surface of the carpets cleaned, but dirt rubbed or stamped into them is drawn out.

This unique apparatus is the invention of D. T. Kenney, New York, and this is the first to be installed in Canada, the decision to introduce it here being a recommendation from Mr. Joseph Wright, of the Bennett & Wright Co., Limited, Toronto, who, while on a visit to New York, saw the machine in operation. Mr. Wright expressed to HARDWARE AND METAL the opinion that the day would probably come when these machines would be taken from door to door in gasoline or electric carriages and sweeping done by the job, the machine being worked by its own power.

BRITISH CYCLE PROFITS.

The London Statist, which several weeks ago published comparison of earnings statements of several leading British cycle companies, has gathered further information on this score, which, like the previous returns, points to a further improvement in that industry abroad. From these figures is compiled the follnwing comparative table of net profits from four companies:

	Bowder Brake. Ltd.	Eadie Manfg.	New Centaur.	Humber Ltd.
1898.....	£ 420	£ 9,491	£ 15,130	....
a1899....	1,977	5,142	*2,408	....
1900.....	14,550	2,329	*2,168	£11,553
1901.....	25,125	13,495	2,609	19,054
1902.....	40,610	16,725	4,656	21,087

a Nine months. Note the dates of the fiscal years are not the same in all cases. *Net loss.

Brussels, Ont., has passed a by-law to loan $5,000 to Cotteridge Bros., who will operate the Brussels Woollen Mills.

CATARACT AUXILIARY CO.

THE promoters of The Hamilton Electric Light and Cataract Power Company have organized a second company, The Cataract Auxiliary Co., of Hamilton. The charter of the new company empowers it "to manufacture, sell or purchase electric power, whether generated by water power, steam or other force, and to apply the same in any of the arts or sciences, or in the manufacture of any article, or in any condition in which the use of electricity is employed for the purposes of the company's business; and, generally, to have the benefit of all powers given, in the act respecting companies for supplying steam, heat, electricity, or natural gas for heat, light or power."

Hon. J. M. Gibson, who is a director of the company, states that the company had been formed for the purpose of increasing the plant, and to work out the steam auxiliary feature of the Cataract Power Co.'s enterprise. The steam auxiliary is being established on Victoria avenue, and it is calculated to help out with the power during a couple of months in the winter, when the demands for power and light overlap. For about two months in the winter the lights have to be turned on an hour or so before the factories shut down for the day, and the steam auxiliary is to come to the company's relief and overcome difficulties in the matter of supplying all the power and light required. The auxiliary company, which is under agreement with the parent company, will double the power capacity at DeCew's Falls, the idea being to supply all the power the International Harvester Co., Deering division, may need, as well as power required by any other company.

GOLDIE & M'CULLOCH ENLARGING.

Goldie & McCulloch, the machinery firm of Galt, Ont., have found the demand for their goods manifesting such growth in recent years that they have been compelled to plan new works, which will be built on a much more extensive scale than their present premises. They will be erected close to the town limits of Galt, about a mile from their present location. They have secured 26 acres, with railway facilities of the most satisfactory character.

THE MAKING OF STEEL TUBES.

AT the meeting of the Cycle Engineers' Institute, held in Birmingham on December 11, W. J. Talbot, A.M.I.M.E., read a paper on "Steel Tube Manufacture," dealing particularly with the seamless tube used for naval purposes and cycle construction. A few years ago, tubes were almost universally made by the hot process, but that was now more or less obsolete, and modern practice tends to various cold-drawing methods. Some of these, after describing the material and its preparation in the rough, the author proceeded to explain, using diagrams to make his description clear. He showed that the Mannesmann and Stiefel processes, which came under the category of "hot work," did not finish the tube, but carried the production to the cold-drawing point. Large tubes were usually drawn on a parallel bar and loosened afterwards in a reeling machine, and with tubes of 2¾ inches and over for Admiralty purposes, where a very narrow limit of eccentricity was allowed, it was necessary to turn the tube down after the first pass. The number of turns the tube had to make through the drawing-dies depended on the use to which it was to be applied, to the guage and size, and to other circumstances, but before each pass it had to be annealed, and pickled in a hot vitriol bath, and finally dipped in a lubricant before reinsertion in the dies. Annealing was the most expensive part of the process, and the author emphasized the need for efficient muffles, which could be worked to give rapid heating, very gradual cooling, a neutral atmosphere, and an absence of contact between the tubes and the muffle-flames, these being essential conditions to economical production. Bad surfaces were due to very slight causes, principally arising out of the pickling, and constant care was needed to avoid loss from impurities in the acid, unsuitable water, strong or overheated pickle, etc. Mr. Talbot supplemented his paper by a number of tables showing the results of tensile tests, the loss of weight due to the processes, the corrosion which follows exposure to acid solutions, salt water, and pure water —the last tests having been made with plain and coppered tubes. With the acid solution and pure water the coppered tubes had the advantage, but salt water corroded the plain tube more slowly than it did the coated samples.

In an animated discussion which followed the reading of the paper, Mr. Clements, speaking as a practical cycle manufacturer, said pickling was, no doubt, at the bottom of many of their troubles, especially those arising from the peeling of enamel. To the pickling by acid was due the rusting of the insides of tubes, and the rust inside the tubes, owing to the slenderness of the walls, soon percolated through, and so caused the stripping of the enamel. With a view of overcoming that evil so long as pickling was necessary—Mr. Clements suggested that tubes should be treated in the same way as gun-barrels are treated in the preliminary process of "browning"—they should be boiled. They should be immersed for 10 or 15 minutes in a boiling solution of soda—a pound of soda to a gallon of water—and afterwards washed to free them from the soda. They should then be boiled for a further period of 20 minutes in pure water—distilled water, if possible; if not, rain water. By this process, the tube would become thoroughly cleansed and coated with magnetic oxide, and if the enamelling were properly done, the risk of stripping would be very slight.

MACHINERY NOTES.

THE directors of the Consolidated Pneumatic Tool Trust have decided to erect their new works in a small town in Scotland, giving as their reason that the workmen will live better and more comfortable there than in a large city, and will thus be more vigorous and contented. About 5,000 men will be employed.

A No. 2 Petrie boiler was shipped to W. D. McRae, Wallaceburg, Ont., by H. W. Petrie, Toronto.

The Dominion Harness Co., Port Elgin, Ont., have purchased from H. W. Petrie, Toronto, a 20-in. Barnes upright drill for their plant.

A Little Giant planer and matcher, a 12-in. buzz planer and a spoke and axe handle lathe have been shipped by H. W. Petrie, Toronto, to Albert Harris, Collingwood, Ont.

Mr. Joshua Peters, formerly manager of the Moncton, N.B., Record Foundry and Machine Co., has gone to North Sydney to fill an important position with the Nova Scotia Steel and Coal Co.

A machine shop will probably be erected n Winnipeg or across the Red River in the spring. Mr. Murray, of the Rat Portage Iron Works, has been in Winnipeg looking over the situation.

In the German army estimates $25,000 has been set apart for experiments with field automobiles, as trials with these machines made up to the present time have shown them to be of permanent value.

Additional tools in the shape of a 21-in. swing, 8-ft. bed, Crosby Co.'s screw cutting engine lathe, and a 16-in. by 8-ft. Porter lathe were installed in the plant of the Taylor Safe Works by H. W. Petrie, Toronto.

Manager Douglas, of the Otis Elevator Co., proposed at a meeting of the Hamilton, Ont., Board of Trade, that a committee of manufacturers canvass manufacturers in the United States with a view of having them locate establishments in Hamilton.

The Mineral Range Iron Mining Co., which is engaged in developing the magnetite resources of Hastings County, will construct an electric road in connection with their enterprise. The road will run from the company's property to L'Amable Station, on the Central Ontario Railway.

The Boiler Inspection and Insurance Co., of Toronto, has been instructed by the Deputy Minister of Militia to make semi-annual inspections and reports upon the hot-water heating boilers, which are installed in military buildings in the Dominion, except those in Nos. 10 and 11 Military Districts.

Geo. Heamon, of East London, Ont., has designed a new style of snowplough. It is supported on a double set of runners, like a sleigh. The blade is adjustable in height, so that on board walks it will clean off snow to within half an inch of the surface, while on smooth concrete walks the snow will be entirely removed. There are shafts attached to the plough, and a seat for the driver. There is also an attachment for sprinkling sand on slippery walks. It is estimated that it can be made at about $35.

ROLLING MILLS IN TORONTO.

The announcement was made this week by a prominent shareholder of the Toronto Steel Co., who is also closely identified with the Dominion Iron and Steel Co., that the directors of the Toronto company had decided on the erection of a rolling mill in conjunction with the structural steel mills and general works at present controlled by the company. The necessary capital for the construction of the mill had already been set aside by the directors, and the work would be started as soon as the arrangements at present being made with the Toronto city council had been completed. The particular reason given for the establishment of the new mills was that a much larger market for all kinds of steel was growing rapidly throughout western Canada, and that large profits would be rendered possible by the company having its own rolling mill. The pig iron and steel billets could be secured from the Dominion Iron and Steel Co.

THE OFFICE

DEVOTED TO THE OFFICE STAFF OF BUSINESS ESTABLISHMENTS.

INVESTIGATING THE ACCOUNTS.

By W. H.

TAKING stock of his accounts is as necessary to the merchant as taking stock of his goods. The banks monthly balance their books and thus are enabled to keep themselves informed of the extent of their business and whether it is going back or advancing. Likewise, every merchant should take stock of the accounts in his ledger as well as of the goods on his shelves. He should scrutinize the names of his debtors. Some of his customers he will find especially desirable; others, he will find slow pay and not desirable. The good ones should be well treated and promptly waited upon, and if they have any complaints these should be quickly investigated and settled in a manner that will give satisfaction to all concerned. If concessions be necessary, even though it means an actual loss to the merchant, they should be made to retain custom.

The hardware business, like every other, has slow and poor payers amongst its customers. These should also be considered, but in a different way from the others. They should be made to pay more for their goods than those who settle their accounts promptly. It is just and right that the people who buy their hardware, etc., and keep the hardwareman out of his money for a time needlessly long, giving him other unnecessary expense and great bother in collecting his accounts, should pay the highest ruling price for their goods. It is only fair that the man who settles promptly his accounts should buy his goods at the lowest price going. Complaints about overcharges can be met by giving a discount for immediate settlement.

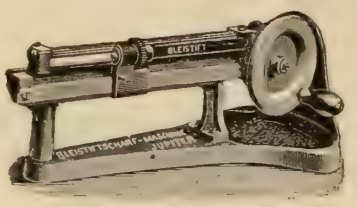
Besides, the slow-pay customers are the ones who scarcely ever pay. It is a fact, we are sorry to say, that some people make it a practice of running accounts with their hardwareman, tailor, dry-goodsman, and everyone else they can, without intending to pay their debts.

Caution should be exercised in opening out new accounts. Reports of the financial standing of the would-be-customer should be obtained from mercantile agencies, and as much found out about him as possible before giving him the goods. A customer of this sort often may deal with you for months, always seem to have lots of money and pay cash every time for the goods until you are confident that he is square and honest. He asks credit for a small amount, gets it, and settles promptly the first time. The next time he gets in deeper; at last a large account is run up, and then you never see him again in your store. You resort to the law courts, but find legal proceedings are useless; he has everything in the name of his wife, or he resorted to some other means to avoid being compelled to pay his debts. Such cases as this are too common among the trade. The merchant would do well to be on the alert and work up a cash business as far as possible.

The credit system of itself is all right, but should not be abused.

PENCIL-POINTING MACHINE.

Grand & Toy, office outfitters, Wellington street, Toronto, have a unique office device in the shape of "Jupiter" pencil-pointing machine which they are showing



to the public. By the invention of the "Jupiter" a long felt want for a pencil-pointer is supplied. The accompanying cut is an illustration of this practical office device.

ACCOUNT COLLECTIONS BY DRAFT.

The prevailing system of collecting out-of-town accounts to-day is by draft, either at sight or time. There is, however, amongst the retail trade, to a certain extent at least, a prejudice against this system of collecting. If the retail merchant who is thus prejudiced would consider the time, trouble and expense of remitting, which is saved by simply accepting a draft, this system would no doubt become more popular. Another important advantage is in the matter of cash discounts, which items are very often overlooked by the busy man, and which by the draft system are always assured. When a draft is returned without any apparent reason, the credit man has no option, but must write the customer, usually in a courteous way, requesting him to state why the draft has been returned. If the draft is incorrect, the customer will no doubt reply to this effect at once, but, in nine cases out of ten, no reply is forthcoming, and a man who has some 3,000 or 4,000 accounts to deal with is obliged sometimes to write several letters before receiving a satisfactory reply. The relations between debtor and creditor are in this way strained considerably where a line or two from the debtor would have prevented any unpleasantness or misunderstanding. The customer must be reasonable and do his part.

BUSINESS PERSONALS.

D. G. Scott, of the Merchants Bank, Montreal, has been transferred to the branch at Galt.

Mr. Edmunds, of the Bank of Commerce, Winnipeg, has been removed to the branch at Ottawa.

Mr. Fellows, of the Bank of Montreal, Montreal, has been transferred to the branch at Ottawa.

C. A. MacMahon, of the Wolverton, Ont., branch, has just been named assistant accountant of the Sovereign Bank in Montreal.

S. L. Smith, of the Bank of Montreal, at Guelph, on leaving for New Westminster, B.C., was presented with a handsome gold locket by the manager and staff.

E. T. Horn, formerly assistant to Mr. Russell, the manager of the Intercolonial Railway at Moncton, has been appointed assistant to the general superintendent of the Baltimore and Ohio Railway, with headquarters at Pittsburg, Pa.

The Adams Furniture Co. last month celebrated the anniversary of their moving to their new building at City Hall Square, Toronto, by a tastefully arranged "At Home," which proved a popular event with their many customers and friends.

PAINT, OIL AND BRUSH TRADES

THE MANUFACTURE OF CASTOR OIL

CASTOR OIL is produced in California, Italy, Mexico and India, the first named being the principal producing field.

In both California and Mexico the process of extracting oil from the seed is simple. After gathering the seeds in the fall of the year they are placed in drying furnaces for an hour or so for a sufficient time to soften the seeds, as the greater percentage of the oil contained in a seed can be obtained when the seed is soft. After they have been removed from the dryer they are placed in the press, similar to a cider press, and the seeds are crushed. The oil runs into a large bowl directly beneath this press and is mixed with about an equal portion of water and boiled for one and one-half or two hours —thus precipitating the albumen and other impurities. When cool there will be a thin scum on top which is skimmed off. The water and oil are then separated, sometimes by running the water off and sometimes by "bailing" out the oil, which is placed in the "sun tanks"—(tanks of metal exposed to the sun) where it bleaches for eight or ten hours and is then removed to the storeroom, where it is placed in barrels, carboys, etc., ready for the market. Some of the trees in California reach a height of 50 feet, and the seeds from one tree contain as much as 15 gallons of pure oil.

PRACTICAL PAINT CALENDAR.

John Lucas & Company, of New York, Philadelphia and Chicago, are sending out to the trade this year one of the most practical calendars received by "Hardware and Metal" this year. The calendar pad is printed in white on a dark green, the letters being large and easily read. Above the pad is a view of Longfellow's home, Cambridge, Mass. Printed on the calendar, underneath the pad, are many hints to painters and paint dealers, such as help in case of accidents, antidotes for poisons, weights and measures, tests for linseed oil, turpentine, etc. This calendar should be secured by all hardware dealers, who can have them by mentioning "Hardware and Metal."

PRIVATE POST CARDS.

The United Factories, Limited, Toronto, have had designed and printed two private post cards, which, from either the artistic or commercial standpoint, are about as good as anything yet issued in Canada. One of these portrays half a dozen designs of brushes, a cut of the firm's trade mark and the firm's name, the other presents an assortment of woodenware. All the goods are shown in their natural colors, and as the workmanship on the work is of a high order, these cards will be received with pleasure by the trade.

ADVANCE IN QUOTATIONS.

The Francis-Frost Company, Limited, Toronto, have changed quotations on their "Ark" brand paints from $1.20 to $1.25 per gallon.

NEW BRUSH AND BROOM FACTORY

T. S. Simms & Company, Limited, St. John, N.B., held a reception at their new factory on Tuesday, last week. They have one of the best appointed broom and brush plants in Canada. The offices and sample rooms are very handsome, but it was the splendidly arranged factory which commanded particular attention.

SHERWIN-WILLIAMS CO. ENLARGING

Expansion is the order of the day at the Toronto branch of The Sherwin-Williams Company just now. This firm have found it necessary to strengthen the supports for the floors, because of the great weight of stock carried. They have, moreover, been compelled to enlarge each of the four floors of the warehouse fully 50 per cent. These extensions are a result of the increasing business in the Toronto district trade of this company, which has necessitated their carrying about three times the stock in Toronto that was carried last year. The offices of the branch are also to be enlarged.

PAINT AND OIL NOTES.

T. G. Richardson, painter, St. John, N.B., is dead.

An increase of about 5c. is noted in turpentine this week.

The Consumers' Varnish Company, of Montreal, have dissolved.

A. Joly & Company have registered as painters, in St. Louis de Mile End, Que.

Wilks & Michaud have been appointed curators of R. C. Thornloe, painter, etc., Montreal.

Markham, Ont., has voted in favor of exempting The Lount Brush-handle Factory from taxation.

The Toronto Painters' Union have elected Thomas Gordon, president, and R. W. Fletcher, secretary.

The Sun Oil Refining Company, of Hamilton, Limited, is authorized to increase its capital from $50,000 to $100,000.

The Hamilton, Ont., Broommakers' Union have elected H. P. Walker, president, and Walter Rolls, secretary-treasurer.

Robert Munro, manager of The Canada Paint Company, was confined to his house three or four days with a severe cold.

The travellers from all the paint houses of Montreal are again on the road, after spending the holidays with their friends at home.

The annual meeting of The Canada Paint Company, Limited, will be held at the head office, Montreal, on Saturday, January 17.

The excitement over the new oil wells in Raleigh township, neat Chatham, Ont., continues keen. Several new wells, of more or less volume, have been struck.

The large stock of paints, oils and varnishes carried in Westman's hardware store, London, Ont., had a narrow escape from fire on Monday night, but the flames were checked when about $100 damage was done.

Moffatt's, Limited, 33-35 Charterhouse Square, E.C., London, Eng., are introducing to the British trade an incandescent oil lamp, which they claim will give from 70 to 80 candle light with an oil consumption of one quart in from 12 to 15 hours. It is constructed with a silver cone for the outer-wick tube, which, in conjunction with a new style of burner and a special form of chimney-gallery will prevent the flame from increasing in volume when left alone.

PAINT AND OIL MARKETS

MONTREAL.

ALL the paint dealers have already representatives on the road, though begun receiving orders from their they only left their headquarters the first of the week. There is a slight advance in linseed oil on the English markets, but up to the present the local quotations have not been changed. There is an advance in the price of turpentine, which is accounted for by the very strong feeling in the South, and a still further advance is not at all improbable. A rumor is afloat among the trade that a general advance in prices may take place in the near future. We quote:

GROUND WHITE LEAD.—Best brands, Government etandard, $4.90 to $5.15; No. 1, $4.67½ to $4.77½; No. 2, $4.30 to $4.40, No. 3, $3.92½ to $4.02½; No. 4, $3.55 to $3.65 all f.o.b., Montreal. Terms, 4 months, or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—$5 in casks, and in kegs, $5.25.

DRY WHITE ZINC.—Pure dry, in casks, 6¼c.; in 100-lb. kegs, 6¾c. No. 1 zinc, in casks, 5¼c.; in 100-lb. kegs, 5¾c.

WHITE ZINC (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No.2, 6c.

PUTTY.—We quote: Bulk, in bbls., $1.90 per 100 lb.; bulk, in less quantity, $2.05; bladders, in bbls., $2.25; bladders, in 100 or 200-lb. kegs or boxes, $2.40; in tins, $2.55 to $2.65; in less than 100-lb. lots, $3 f.o.b. Montreal, Ottawa, Toronto, Hamilton, London and Guelph. Maritime Provinces, 10c. higher, f.o.b. St. John and Halifax.

ORANGE MINERAL.—Casks, 7c.; 100-lb. kegs, 7¼c.; smaller quantities, 8¼c.

RED LEAD.—Genuine red lead, in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities, $5.75 per 100 lb. No. 1 red lead, casks, $4.25; kegs, $4.50, and smaller quantities, $5.50.

LITHARGE.—Ground, casks, 5c.; less quantities, 5½c.; flake litharge, casks, $5.25; smalls, $5.75 per 100 lb.

LINSEED OIL.—Raw, 60 to 63c. in 1 to 4 bbls.; 59 to 62c. in 5 to 9 bbls. Terms, net cash in 30 days. Delivered in Ontario, between Montreal and Oshawa, at 2c. per gallon advance.

TURPENTINE.—Single barrels, 80c.; 2 to 4 barrels, 79c. Terms, net cash in 30 days.

SHELLAC VARNISH.—Pure white, $2.35 to $2.45; orange, $2.25 to $2.35.

MIXED PAINTS.—$1.20 to $1.40 per gallon.

CASTOR OIL.—8¾ to 9¼c. in wholesale lots, and ½c. additional for small lots.

SEAL OIL.—48 to 50c.

COD OIL.—35 to 37½c.

PARIS GREEN.—Canadian: Petroleum barrels, 13¼c. per lb.; arsenic kegs, 13½c.; 50 and 100 lb. drums, 14c.; 25 lb. drums, 14½c.; 1 lb. packages, 15c.; ½ lb. packages, 17c.; 1 lb. tins, 16c.; ½ lb. tins, 18c. English: Petroleum barrels, 14½c.; arsenic kegs, 14½c.; 50 to 100 lb. drums, 15c.; 25 lb. drums, 15½c.; 1-lb. paper boxes, 16c.; 1 lb. tins, 17c.

TORONTO.

Turpentine has advanced 4c. per gallon, the rise being due to enhanced prices at primary markets, where it is claimed the market is almost cornered. Linseed oil is firm in primary markets and steady here. Orders for white lead are being booked, subject to possible changes in the tariff, the feeling being that the tariff on pig lead and lead products may be changed. There is not much doing yet, as the travellers are just getting down to business after the holidays. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5 to $5.25; No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½.; No. 4, $3.50 to $3.75 in packages of 25-lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. pkgs.; genuine dry white lead in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.50 to $4.75; ditto, in kegs of 100 lb., $5; No. 1, in casks of 560 lb., $3.75 to $4; ditto, kegs of 100 lb., $4.25.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In 5-gallon lots, 60 to 75c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb.; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35c.; in less than cases, 40c. per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.25 to $2.35; white, $2.35 to $2.45 per gal.; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8½c. per lb.; cabinet glue, in bbls., 12c.; emery glue, in bbls., 17½c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.25; bladders, in 100-lb. kegs, $2.40; bulk in bbls., $1.90; bulk, less than bbls. and up to 100 lb., $2.05; bladders, bulk or tins, less than 100 lb., $2.90.

PARIS GREEN.—Petroleum bbls., 14c. per lb.; arsenic kegs, 14½c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. packages, 16c.; ½-lb. packages, 18c.; 1-lb. tins, 16c.; ½-lb. 18c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1 10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 9 to 9½c. per lb. and 10 to 10½c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 65c.; boiled, 68c.; 3 to 5 barrels, raw, 64c.; boiled, 67c.; 6 to 9 barrels, raw, 62c.; boiled, 65c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 bbls. and over of linseed oil sold only f.o.b. Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 81c.; 2 to 3 bbls., 80c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

GASOLINE AND BENZINE.—We quote: Benzine, 19¼c. and gasoline, ordinary, 21¼c. and engine, 22¼c. f.o.b. Toronto.

STOVES AND TINWARE

AND ALLIED TRADES

SIMPLE WAY TO HEAT A GREENHOUSE.

MANY householders are considering about how to keep their little greenhouses warm during the severe winter. A lot of them have been trying oil stoves and things of that sort, but obviously the suitable plan is to connect up with the kitchen boiler. How is this to be done? Here is the answer of an expert: "The first question to be decided is whether or not the fire-box in the range is large enough for heating the kitchen and doing the regular cooking, and has capacity to heat the water required for domestic purposes, and then have a reserve capacity sufficient to heat the amount of radiating surface required in the greenhouse. If the boiler in use rumbles, it is evidence that the water-back makes steam, and consequently can heat more water than is now being used. The next question is the size of the greenhouse, and, in the absence of the dimensions, I can only suggest that 20 square feet of heating surface in the greenhouse will be equivalent to heating ten gallons extra of hot water for ordinary use. I assume that it is only a small conservatory attached to the building, and that it will not require a very large radiator. The best way to pipe will be to take the brass coupling out of the top of the boiler which supplies the hot water service pipe, and use in its place a 1-in. iron pipe with a tee on it for supplying the domestic supply system from the side and the conservatory radiator from the top, to insure the conservatory getting the hot water quickly. It may be necessary to place an air valve at this point to permit any air that may accumulate to escape. The pipe can then be carried to the radiator coil, and the return of the same size can be carried to the water-back, using a tee to receive the cold water from the boiler as well as the return water from the conservatory coil."

BUCK STOVE CO. TO ENLARGE.

A Brantford, Ont., despatch says that The Wm. Buck Stove Company, of that city, have decided to make an outlay of $100,000 on a new factory. The Canada Cycle and Motor Company's premises in Brantford have been purchased, and additional buildings will be put up. Construction will commence in the spring, and at their completion the works will include the following buildings: Warehouse and shipping department, 60 x 300 feet, four storey; millroom, 50 x 100 feet, one storey; machine and mounting department, 40 x 225 feet, three storeys; pattern and polishing shop, 40 x 150 feet, one storey; nickel-plating and buffing department, 30 x 70 feet, one storey; steel range and sheet department, 48 x 65 feet, three storeys; japanning and finishing department, 25 x 50 feet, three storeys; office, sample rooms and stores, 40 x 150 feet, three storeys; mounting shop, 160 x 275 feet, one storey; pattern vault, 40 x 125 feet, one storey. In addition to these there will be a power-house of three storeys, besides a large cupola attached to the moulding shop.

HOT-AIR STOVES.

INLETS to stove chambers (the air-heating space) must enter, and the outlets must leave, at points which will insure the flow of air having the most intimate possible contact with the stove, says Ironmonger. The cold-air ducts (tubes) to stove-chamber should be three-fourths the total area of the warm-air ducts to rooms. The grating to the cold-air ducts, lined with wire gauze, must be double the area of the ducts. The warm-air ducts to rooms (residence work) should be: Ground floor, 50 square inches area per 1,000 cubic feet of space in the rooms; first floor, 40 square inches; second floor, 32 square inches. The registers or gratings in rooms through which the warm air is delivered should have one-fourth greater area than the ducts. This is to insure slow or diffused delivery. Note that the area of gratings means the area of the voids or spaces in the gratings. Gratings average three-eighths of iron-work. It is in the highest degree essential that extract ventilation should exist or be provided in the rooms. Warm air will not enter a room already full of air, but it will enter if the air already there is being extracted, and the inflow will be in exact ratio with the extraction. If ordinary chimney-flues exist, these (if having normal draught) are efficient extractors, and a 9 by 9 chimney will serve a fairly large room. The following are the usual figures, though the extract-shafts have varying efficacy, according to their height: Extract-shafts, ground floor, 32 square inches per 1,000 cubic feet of space; first floor, 40 square inches; second floor, 50 square inches. Gratings to these (if any) can have a clear opening of same area as the shafts.

A PATRON SAINT OF TINNERS.

ST. PERRAN is the patron saint of tinners, and is said by The London Globe to have invented their banner, a white cross on a black background, symbolizing the black tin ore and the white metal. Some think it was he who first taught the Cornish folk to "stream" for tin. But he lived in the fourth century after Christ, so it is difficult to reconcile this with the other legend of the Tyrians, who traded in Cornwall in the days of King Solomon. Be this as it may, St. Perran was a man of great local importance in his day, for many villages are called by his name, such as Perranzabuloe, Perranwortha, Perranuthnoe and Perranporth. There is a story that he sailed the seas from Ireland sitting miraculously upon a floating millstone, so, perhaps, his story is not to be entirely accepted without question. However, one evening when the holy man was cooking his supper, he took a large, heavy, black stone for one side of his fireplace. This primitive stone burned with intense heat and suddenly a stream of brilliant white metal flowed from the block of ore. The saint rejoiced and called the Cornishmen together that they might celebrate his discovery with feasting. This they did with much zeal, consuming their national drinks of mead and metheglin in such quantities that "drunk as a Perraner" passed into a proverb that remains to the present time. This event took place on the second Thursday before Christmas, since called Pierous Day and still kept as the tinner's holiday.

AMONG THE TRADE.

T. P. Bell, hardware dealer, of Beeton, Ont., was in Toronto on business on Wednesday.

Three hundred cars of coal per week are now arriving in Toronto, about half of it being anthracite.

A. W. Carrick, vice-president and general manager of The Gurney Foundry Company, Toronto, is back to his desk, after several weeks' absence through illness.

Smith's Falls, Ont., has defeated a by-law to fix the assessment and taxable income for ten years of The Gould Manufacturing Company, manufacturers of stoves, etc., of that town.

MANTELS, GRATES and TILE.

The Thos. Davidson Mfg. Co., LIMITED, Montreal, P.Q.

MANITOBA MARKETS.

WINNIPEG, January 5, 1902.

THERE cannot be said to be any hardware market, as trade is experiencing the usual after holiday depression. Nearly all the jobbing houses will spend the next month taking stock and getting ready for Spring. There will be a new price list out next week, and, although there will be few changes, there will be a general revision of the lists. The outlook for trade in building hardware is excellent, as plans are already under way for many new buildings, and all indications point to an extremely active building year. There will also be a very extensive trade in barb wire. The large number of American settlers coming in have increased the demand, as they are accustomed to fencing their land at once, and our own people are fencing more land every year.

Quotations are as follows :

Barbed wire, 100 lb	$3 25
Plain twist	3 25
Staples	3 65
Oiled annealed wire 10	3 42
" 11	3 48
" 12	3 56
" 13	3 66
" 14	3 76
" 15	3 91

Annealed wires (unoiled) 10c. less.

NOTES.

The weather of the past week has been so mild that good progress has been made with the brick work on the Cockshutt Plow Co.'s new building.

W. G. McFarlane, Western manager for the Marshalls Hardware Co., has gone to Duluth to consult with the heads of the company as to plans for 1903.

The Canadian-Port Huron Co., Limited, have received their letters of incorporation for the purpose of manufacturing and dealing in implements, tools, etc., at Winnipeg with a capital stock of $100,000.

The Manitoba Iron Works Co., that has recently applied for incorporation, has taken over the Standard Machine Works and will erect new workshops and foundry on Logan avenue.

The American-Abell Machine Co. has most kindly loaned its great, new warehouse, 200 x 260 ft., to the curlers for the Bonspiel. This is a great advantage, as, owing to the presence of the Scottish curlers, an unusual amount of ice is required. The building will give 20 additional rinks.

Wm. Plaxton, of the firm of Plaxton Bros., one of the oldest plumbing houses in the West, died in Carlsbad, Austria, last week. Mr. Plaxton had sought the famous waters as a cure for jaundice, but had apparently gone too late. Mr. Plaxton was 51 years of age and leaves a wife and adopted daughter.

NEW HARDWARE FIRM.

Three Regina, N.W.T., young men have purchased the building and stock of John A. Kerr, Regina, and after February 15 will carry on a wholesale and retail hardware business there under the style of The Western Hardware Co. It is proposed to pay particular attention to builders' and blacksmiths' supplies, and, in addition, all classes of hardware for farm and general use, shelf goods of all kinds, stoves, ranges, etc., will be kept in stock. A workshop will be carried on in connection with the store, and special attention will be devoted to hot-water heating, pumps, and pipe-fitting in all its branches, furnaces, furnace work and tinsmithing.

MORE NEW LISTS.

ALONG with other Canadian makes of shovels a reduction in price has been made in those of The Halifax Shovel Company, ranging from $1 to $2.50 per dozen. The new lists are as follows :

PHOENIX FILE CO.'S PLANT SOLD.

The Nicholson File Co. have recently purchased the stock, machinery, tools, etc., of the Phoenix File Co., which was operated for many years by the late F. Bausch, Cote St. Paul. The Nicholson Company have removed the entire plant to their Dominion Works, Port Hope.

The journeymen plumbers of Providence, R.I., have in their union meeting rooms a library of trade publications and technical works relating to their trade. This would be a good thing for the master plumbers' organizations as well as for the journeymen's unions of Canada to do.

JAPANS

"But who can Paint like Nature!"

It is not given to us to paint like nature but the **CANADA PAINT COMPANY** take the crude pigments which nature so generously provides and fashions them into a number of striking and serviceable colors for the use of the community. To go straight to the point, if you are interested in good durable paint and varnish, patronize the Canada Paint Company's manufactures. Please note that, notwithstanding increased competition, the bookings in December for Spring shipment are double what they were for the same period last year. To avoid disappointment order early. Address **The CANADA PAINT COMPANY, Limited, Montreal or Toronto.**

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

HARDWARE.

Montreal, January 9, 1903.

BUSINESS in wholesale hardware circles has been seasonably quiet since the holidays. Many of the travellers are in from their routes, and several factories have been shut down for repairs or stock taking. The outlook for spring, however, is as encouraging as ever, and there is little doubt but that the year 1903 will be quite as prosperous unless in the event of some unlooked-for setback, as last year. At all events trade conditions are now in a most healthy state, both among wholesalers and retailers. The retail trade during the holiday weeks was lively, and payments to wholesalers are reported good. "Stanley" rules have advanced 5 per cent., and "Stanley" levels are about 10 per cent. higher. Saturated paper is now quoted at $1.75 per 100 lb.

BARB WIRE.—The market is still quiet. The price is $2.90 per 100 lb., f.o.b. Montreal; $2.55 f.o.b., Cleveland, in carlots of 15 tons; $2.67½ f.o.b., Cleveland, in smaller lots.

GALVANIZED WIRE.—There is still a very slow movement and no particular change in prices. We quote: No. 5, $3.70; Nos. 6, 7 and 8, $3.15; No. 9, $2.65; No. 10, $3.20; No. 11, $3.25; No. 12, $2.80; No. 13, $2.90; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—A few orders have been received, but the market rules quiet at unchanged prices. We quote as follows: Bright and annealed, $2.50 per 100 lb. f. o. b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE WIRE.—There is but a small amount of business passing on this market. The discount remains at 25 per cent. with the following extras: 1 and 2-lb. hanks, 25c per 100 lb.; ½-lb. hanks, 37½c. and ¼-lb. hanks, 50c.

BRASS AND COPPER WIRE.—Both these wires move slowly. They are discounted at 62½ per cent.

FENCE STAPLES.—A small amount of business has transpired on the local market on a basis of $3 per 100-lb. keg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

WIRE NAILS.—Trade is quiet at unchanged prices. We quote: Carlots, $2.40; small lots, $2.45 per keg f.o.b. Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

CUT NAILS.—There has been a slight improvement in the demand, but the market is still inactive. In carlots, the price is $2.40 per keg, and in small lots, $2.45 per keg.

HORSE NAILS.—Business this week is of small proportions. "C.L.C." horse nails are discounted at 57½ per cent. off. The discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent. off; on "M" brand, "Oval," 57½ per cent.; "New City," 57½ per cent.; "New Countersunk," 65 per cent.; "Monarch," 65 per cent.; "Peerless," 50 and 7½ per cent.

HORSESHOES.—The demand is small and the market rules quiet. We quote as follows: Iron shoes, light and medium, pattern, No. 2 and larger, $3.35; No. 1 and smaller, $3.60; snow pattern, No. 2 and larger, $3.60; No. 1 and smaller, $3.85; X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.45; No. 1 and smaller, $3.70; featherweight, all sizes, 0 to 4, $5; toe weight, all sizes, 1 to 4, $6.25. Shoes, more than

one size in a keg, 10c. per keg extra. F.o.b. Montreal only.

RIVETS AND BURRS.—A few orders are reported this week. The discounts have not been changed. We quote: Best iron rivets, section carriage, and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5 lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—The market for bolts and nuts has not changed to any appreciable extent. Discounts are: Norway carriage bolts, 55 per cent.; common, 50 per cent, full square carriage bolts, 55 per cent.; machine bolts 50 and 5 per cent.; coach screws, 66 2-3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50 and 5 per cent. To any retailer an extra discount of 10 per cent is allowed. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3½c. per lb. off list; hexagon nuts, 3¾c per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—The discounts on screws are unchanged. Trade has not improved. The discounts are quoted as follows: Round head bright, 82½ and 10 per cent.; flat head bright, 87½ and 10 per cent.; brass, round heads, 75 and 10 per cent.; brass, flat heads, 80 and 10 per cent.

CORDAGE.—A reduction of ½c. has been made in sisal and lathyarn. We quote: Pure manila, 14c.; British pure manila, 12c.; sisal, 11c.; single lathyarn, 10½c.

BUILDING PAPER.—The price of ready roofing has been advanced 5c. There is a light movement, and our quotations are as follows: Tarred felt, $1.75 per 100 lb.; 2-ply, ready-roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 50c. per roll; tarred fibre, 60c. per roll; O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN WIRE CLOTH.—There is very little doing. The quoted price is $1.40 per 100 square feet.

FIREBRICKS.—Trade is quiet. Prices are as follows: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—A small amount of business is doing and prices are unchanged. We quote as follows: Canadian cement, $1.90 to $2.25; German, $2.20 to $2.30; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl., ex-wharf, and American, $2.10 to $2.20 ex-cars.

SNOW SHOVELS.—There is a fair demand. We quote: "Habitant," $2.25 to $2.40; "Victor," 40 per cent. off; steel railroad shovels, 48 and 5 per cent. off.

FIRE SHOVELS.—A moderate trade is doing, discounts being as follows: No. 70, 38½ to 40c. per dozen; No. 55, 55 to 60c.; No. 57, 82½ to 90c.; No. 60, 82½ to 90c.; No. 65, $1.37½ to $1.45; No. 80, 50 to 55c.; "Duplex," No. 7, $1.21; No. 9, $1.52; No. 11, $1.82.

SKATES.—The demand has fallen off to some extent. Quotations are: Halifax pattern, 36c. per pair; nickel-plated, 65c. per pair, ladies' nickel-plated, 60c.; per pair, ladies' concave nickel-plated, $1.35, plain hockey, 27c. to $1.35; nickel-plated hockey, 60c. to $2.50; double-end hockey, $1.50 to $3. Skate straps, 35c. to $1.35

OPEN HEARTH STEEL

HOCKEY STICKS.—There is still some movement in these, and the prices are as follows: Best second growth, goal keepers', $4.20 per doz.; ash, $2.90; elm, $2.25; boys' elm, $1.10; common, 90c. Regulation pucks, $1.50 per doz.

COAL HODS.—There has not been much demand during the past week. Quotations follow: Japanned, 16 in., $4.50 per doz.; 17 in., $4.80; 18 in., $5.10; with gold band, 17-in., $5.10; 18 in., $5.40. Galvanized, 16-in., $6.20; 17-in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

LANTERNS.—These are moving out fairly well still, business being done on the following basis. Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7 per doz.; dashboard, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper-plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

METALS.

The metal market has developed no striking feature during the week, unless it be the stronger position of copper. That market has been slowly gathering strength and emerging from the weak state which characterized it during the greater part of 1902. At present the price of copper is firm and shows a tendency upwards. The change is likely due almost wholly to speculative influences. Following the example set by American railroads the Canadian roads have advanced rates for transportation of iron products from manufacturing points in Canada. The higher rates will be enforced on angle bars, bale ties, bolts, coil chain and cable, fish plates, galvanized and corrugated iron, iron and steel, bar, sheet, boiler, bundle or band, iron boiler tubes, iron pipe and fittings, pig iron, rivets, nails, screws, spikes, splice-bars, wire, wire rope, staples and tacks. The foreign markets report nothing of importance to this trade.

BAR IRON.—The movement in bar iron is good and has improved somewhat during the past few days. We quote as follows: Merchants' bar, $2; horseshoe iron, $2.25; forged iron $2.20.

BLACK SHEETS.—The market remains unchanged with a fair movement. We quote: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 24 gauge, $2.50; 8 to 20 gauge, $2.50.

GALVANIZED IRON.—No new feature is reported in this market and the prices remain as last quoted. Our prices are as follows: No. 28 Queen's Head, $4.40; Apollo, 10¾-oz., $4.30; Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand $4.05. For less than case lots 25c. extra is charged.

LEAD PIPE.—The movement in lead pipe is fair. Composition and waste are quoted at 8c. and ordinary at 7c. The discount is 37½ per cent.

IRON PIPE.—The market is quiet and the prices are firm. We quote as follows: Standard pipe, per 100 feet, in lengths under 19 feet: Black, ¼, $2.10; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1 in., $5.20; 1¼, $7.35; 1½, $8.95; 2-in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.15; ½, $3.85; ¾, $5; 1-in., $7.20; 1¼, $10.05; 1½, $12.20; 2-inch, $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, ½, $4.20; ¾, $5.25; 1-in., $7.55; 1¼, $10.55; 1½, $12.75; 2-in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1-in., $9.55; 1¼, $13.25; 1½, $16; 2-in., $21.90.

IS YOUR ORDER IN?

Send for Folder No. 14.

Pullman Sash Bal. Co.
Rochester, N.Y., U.S.A.

For threads and couplings 5 per cent. is added.

TINPLATES. There is no change to mention this week, both local and foreign markets being quiet. We quote: Cokes, $4.25 and charcoals, $4.75 to $5.25.

SOIL PIPE AND FITTINGS. There is not much doing in these lines, and we quote the discount as follows: Light soil pipe, 3 to 6 inch, 50 per cent., medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8-inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.; extra heavy fittings, 8-inch, 45 per cent.

PIG IRON.—The market remains quiet and the prices are still quoted at $23.50 to $24.50 ex store Montreal.

INGOT COPPER. There is not much doing, but the market is firm at $12.50 to $13.50 per 100 lb.

INGOT TIN.—There is no change. We quote $27.50 to $28.50 per 100 lb.

PIG LEAD.—Business is quiet and the prices steady. In carlots the price is $2.90 and in small lots, $3.25.

STEEL.—There have been a few orders reported during the week, but prices remain about the same. We quote as follows: Sleighshoe, $2.10 to $2.20; tire, $2.20 to $2.25; bar, $2.05; spring, $2.85 to $3; reeled machinery, $2.75; toecalk, $2.60 to $2.90; machinery (iron finish), $2.10; mild steel, $2.05; square harrow, $2.15.

TOOL STEEL.—Everything is quiet. Prices are as follows: Black Diamond, 8c.; Sanderson's, 8 to 12c., according to the grade; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 65c. per lb.

CANADA PLATES.—The market is without feature, although galvanized plates have been moving freely. Prices are as follows: 52s, $2.70 to $2.80; 60s, $2.85 to $2.90; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.45 to $4.55.

TERNE PLATES.—These are slow. We quote $7.50.

COIL CHAIN.—There is more coil chain being sold at present than at any time during the past few years. We quote as follows: No. 6, 10c.; No. 5, 9c.; No. 4, 8½c.; No. 3, 7c.; ¼ in., 6½c. per lb.; 5-16, $5; 5-16 exact, $5.25; ⅜, $4.30; 7-16, $4.10; ½, $4; 9-16, $3.80; ⅝, $3.70; ¾, $3.60; ⅞, $3.55; 1 in., $3.50. In carload lots an allowance of 10c. is made.

SHEET ZINC.—There is nothing doing. We quote $5.50 to $5.75.

ANTIMONY. Quiet at 10c.

ZINC SPELTER. Very few, indeed, have been the orders for the past couple of weeks. We quote $5.25.

SOLDER.—Bar solder sells at 20c. and wire solder at 18c. with a fairly good trade doing.

SCRAP METALS.

The Montreal dealers say they are receiving more goods at present than they are shipping, as all country dealers generally unload everything they have about the first of the year. The market is still steady and no immediate change in prices is likely to take place. Our quotations are now as follows: Heavy copper and wire, 9c. per lb.; light copper, 8c., heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $15 to $16; No. 2, $7 per ton; machinery scrap, $16.50 to $17; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6½ to 6¾c. per pound.

RAW FURS.

There are fair offerings of raw furs this week. The prices quoted here are about the average and the correct market prices, although on one or two lines it is reported that the quotations of some buyers are a little higher. The figures here given are from the largest dealers, who do not think the condition of the market warrants any advance. We quote:

HIDES.

Business in hides is quiet and the prices remain the same as a week ago. Prices follow: No. 1 hides, 7½c.; No. 2, 6½c.; No. 3, 5½c.; calf skins, 8 to 10c., and lambskins, 65c.

MONTREAL NOTES.

Sisal rope and lathyarn are each ½c. lower.

A few lines of horse bits have advanced 25 per cent.

A decline of 15 per cent. has taken place in blacksmiths' stocks and dies.

give the acme of satisfaction at moderate cost. They please the most esthetic as well as practical taste. Artistically beautiful, almost indestructible, sanitary, easily applied, and almost countless designs to select among.

There's big business in selling these goods—are you ready for it?

Metallic Roofing Co., Limited

TORONTO. MONTREAL. WINNIPEG.

ONTARIO MARKETS.

HARDWARE.

Toronto, January 9, 1903.

WHILE orders from travellers, who started on the road last Monday, are but starting to come in, the letter-order business of the past week has been so large and so satisfactory that the opinion is generally expressed by all jobbers that the outlook for 1903 is even more promising than was the case a year ago. Generally speaking the market is steady, with iron and steel lines stiffening. Rope is fluctuating, the tendency being downward. A decline of ½c. in sisal is reported.

BARB WIRE.—This market is dull and featureless. We quote the base price as follows: $2.67½ from Cleveland, and 12½c. less in carlots. From stock, Toronto, $3.

GALVANIZED WIRE.—There is nothing doing. Prices are unchanged. Our quotations are as follows: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.65 to $2.85; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.80 to $3; No. 13, $2.90 to $3.10; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE.—There is not much demand. The prices are steady this week. We quote the base price as follows: $2.50 per 100 lb. Oiling, 10c.; coppering, 60c. and tinning, $2 per 100 lb extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—The demand is picking up. Prices are unaltered. We quote as follows: $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS.—There is nothing doing. We quote $2.50 per keg.

HORSE NAILS.—Prices are unchanged. Discounts are as follows: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "M" brand, 50, 10 and 5 per cent.; on "Monarch," 65 per cent., and "Countersunk" head, 65 per cent.; "Peerless," 50 and 7½ per cent.

HORSESHOES.—Trade is dull, and prices are unchanged. Quotations are as follows. Iron shoes, No. 2 and larger, light medium and heavy, $3.45; snow shoes, $3.70; light steel shoes, $3.55; featherweight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—A fair sorting trade is to be noted. Prices are steady. We quote as follows: Flat head bright, 87½ and 10 per cent. discount; round head bright, 82½ and 10 per cent.; flat head brass, 80 and 10 per cent.; round head brass, 75 and 10 per cent.; round head bronze, 65 per cent. and flat head bronze, 70 per cent.

RIVETS AND BURRS.—There is no change in the conditions. Quotations are as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—The market is reported quiet. Quotations are as follows: Carriage bolts, common ($1 list), 50 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron ($3.00 list), 55 and 10 per cent.; machine bolts, all sizes, 50 and 10 per cent.; coach screws, cone points, 66 2/3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—A more active demand is reported. The discount is now 45 per cent., and the list price has been reduced $3 per dozen for Olds' goods, $2 for Gray's, and $1 for Burns'.

ROPE.—Sisal is ½c. cheaper. The market has fluctuated materially of late, the general tendency being downward. We quote: Pure manula, 14c.; British manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3-cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—Business is being booked for spring delivery in satisfactory volume. The discount is quoted at 60 and 10 per cent.

LAWN MOWERS.—There is nothing moving, but orders are coming in nicely for spring delivery. Our quotations are as follows: Woodyatt, 12-in. wheels, $7.50; Star, 12-inch wheels, $5.50; Daisy, 12-inch wheels, $4.90; Philadelphia, 10-inch wheels, $6; Ontario, 10-inch wheels, $12.75. The other prices are in proportion.

CUTLERY.—While the movement is as yet comparatively light, the manufacturers, both in Canada and Europe, are kept busy and prices are firm.

BUILDING PAPER.—Last week's advance is well maintained. We quote: Dry sheathing, grey or straw, 35c. per roll; tar sheathing, grey or straw, 45c. per roll; dry fibre, 50c. per roll; tarred fibre, 60c. per roll.

TINWARE AND ENAMELLED WARE.—There is a good movement of milk-can trimmings, but the general trade is moderate.

STOVES AND RANGES.—No trade is doing, but the manufacturers are preparing for another big year's business.

RANGE BOILERS.—A net price is now given for galvanized iron-range boilers, all makes. The quotations follow: 18 and 30 gallon, $6; 35 gallon, $7; 40 gallon, $8; 52 gallon, $12.50; 63 gallon, $19; 82 gallon, $23; 100 gallon, $31, and 120 gallon, $37.

SCREEN DOORS.—The demand is normal. We quote: Screen doors, common, two or three panel, walnut stained, 3-in. style, $6.60; stained, yellow or green, $6.80; in natural colors, oil finish, $8.15; 4-in. style, 20c. per dozen extra.

CEMENT.—Trade is not expected to open up before February. The prices are nominal. We quote: Canadian Portland, $2.80 to $3.20; hydraulic, $1.35 per barrel. At the works the prices are $2.50 to $2.70 per barrel.

METALS.

A normal movement is reported, with prices firm all along the line. Ingot copper is ½c. higher. Other lines bear no change.

PIG IRON.—There is no Canadian pig iron offering. Some Scotch and English iron has been quoted here at figures varying from $21.00 to $23.50 per ton, though some No. 1 English is being sold at $24, when it can be had. Prices are as follows: $23 to $25 for No. 1 and $22.50 for No. 2 at the Canadian furnaces. No. 2 Summerlee is quoted at $25 on track, Toronto.

STEEL BOILER PLATES.—We quote $2 per 100 lb. at Pittsburg.

TOOL STEEL.—The market is stiff, and our prices this week are as follows: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8c. to 9c.; Park's "Silver," 12 to 14c.; Park's Special," 15 to 20c.

MILD STEEL.—The demand at present is a little quiet, but the prices are firmly maintained. We quote $1.90 per 100 lb. at Pittsburg and $2.75 per 100 lb. on track, Toronto.

SPRING STEEL.—The demand is normal, but the mills are still behind their orders. We quote $3.50 per 100 lb. on track, Toronto.

BOILER TUBES.—These are unchanged.

BAR IRON.—Trade in bar iron has improved. The market is firm. We quote base price: $2.05. Extras cut to length while rolling: 2 ft. and over, 10c. per 100 lb., 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft. by special agreement, according to length and size.

BLACK SHEETS.—These are quiet and unchanged. We quote: Common, $3.15 for 28 gauge and dead flat, $2.50 for 26 gauge.

CANADA PLATES.—A moderate demand is noted. We quote as follows: All dull, $2.90 to $3; half-polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—The market continues unchanged, and quotations are: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—The market has gained strength and activity. We quote $29 to $30 per 100 lb.

TINPLATES.—Considerable business is being done for forward delivery. It looks as if prices had touched bottom, and some claim that higher prices will be reached. We quote as follows: Charcoals, $4.75 to $5, and cokes, $4.25 to $4.50 per box.

COPPER.—More activity is reported and an advance of 50c. per 100 lb. in ingot is noted. Our quotations are as follows: Ingot copper, $13; sheet copper, $22 to $23 per 100 lb.

BRASS.—The demand is light. The discount is 15 per cent.

LEAD.—The market is stronger, and the prices are unchanged at $3.50 per 100 lb. for pig lead, and $3.75 for bar lead.

IRON PIPE.—Not much doing. The price per 100 feet is as follows: Black pipe, ⅛ in., $3; ¼-in., $2.30 to $2.40; ⅜-in., $2.65; ½-in., $2.85; ¾-in., $3.65; 1-in., $5.20; 1¼-in., $7.35; 1½-in., $8.95; 2-in., $12.55; 2½-in., $20 to $21; 3-in., $24 to $25; 3½-in., $30 to $32; 4-in., $37.50 to $38.

ZINC SPELTER.—This metal continues inactive. The price is 5 to 6c. per lb.

ZINC SHEETS.—A fair amount of business has been transacted in this line. We quote the base price: Cask lots, $6 to $6.25 and part casks, $6.25 to $6.50.

SOLDER.—The market is improved over a week ago, and further activity is looked for.

ANTIMONY.—Business is fair. The price is steady at $9 per ton.

HIDES, SKINS AND WOOL.

HIDES.—The quality of hides is poor and the prices have declined ½c. Prices

are as follows: No. 1 green, 7½c.; No. 2 green, 6½c.; No. 1 green, steers, 8c.; No. 2 green, steers, 7c.; cured, 8c. per lb.

CALF SKINS. Prices are nominal and business is quiet. Quotations are: Veal skins, 6 to 14 lb. inclusive, No. 1, 10c.; No. 2, 8c.; do, 15 to 20 lb. inclusive, No. 1, 9c.; No. 2, 7c.; deacons (dairies), 60 to 70c. each.

SHEEPSKINS. These are in good demand. We quote 75 to 85c.

WOOL.—This market continues strong and unchanged. Quotations are as follows: Unwashed wool, 8 to 8½c.; fleece wool, 15c.; pulled wools, super, 15 to 16c. and extra, 19 to 20c.

TALLOW.—There has been a decline of ¼c. We quote 5⅞ to 6c. per lb., on track, Toronto, and 6¼ to 6½c. out of store.

SEEDS.

The business that is being transacted in seeds is quiet. There is a little alsike offering at $6 to $6.75 per bushel. Red clover is in limited supply at $6 to $6.25 per bushel for prime to choice seed. Timothy is quoted at $1.60 to $1.80 per bushel.

PETROLEUM.

The market is firm with a good trade doing. The Union Petroleum Co.'s prices are unchanged this week. Prices follow: Lily White, Canadian, 17½c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 20½c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less. The Queen City Oil Company quote as follows: Sarnia Prime White, 17½c.; Sarnia Water White, 19½c.; Family Safety, 20c. in bbls.; Pratt's Astral, 19½c. in bulk.

OLD MATERIAL.

Prices are firm and a good movement is reported. Our quotations are as follows: Heavy copper and wire, 10c. per lb.; light copper, 8 to 8½c.; heavy red brass, 9½c.; heavy yellow brass, 8 to 8½c.; light brass, 5 to 5½c.; lead, 2 to 2½c.; scrap zinc, 3c.; iron, No. 1 wrought, $13 per net ton; No. 2 wrought, $4.50; machinery cast scrap, $15.50 to $16; stove plate, $10; malleable and steel, $6 to $6.50; old rubbers, 6½c. per lb. and country mixed rags, 50c. per 100 lb.

NOVA SCOTIA MARKETS.

Halifax, January 5, 1903.

A NEW year has been ushered in during the last week and the hardware merchants, in common with other business men, express themselves as more than satisfied with the past year's business, both as to volume and to trade conditions generally. All have entered on the new year with a hopeful feeling that the buoyant conditions prevailing now so largely for the last two years will continue through 1903. Their hopes, too, seem to be well grounded, as most encouraging reports have come in from all parts of the Maritime Provinces, all telling of works planned or in progress, which will tend to enlarge trade. This is indeed a growing and expanding period. The money which the farmer and the artizan are not hoarding up in "the old stocking"—as in former years, but are spending in improvements or enlargements, is thus helping trade generally.

• • •

During the last week the hardware trade has not been extensive, but there is always enough inside business to keep everyone busy. Up to New Year's eve the retailers were very busy, and report a very heavy business in both Christmas and New Year's goods. The trade in cutlery and in silverware and fine kitchen furnishings, which now run largely in the hardware trade was especially good, and also in skates, sleds, etc.

• • •

Travellers are now off on the road or are sorting up samples preparatory to taking their orders for spring. They are starting out with every prospect of doing a good trade. The heads of the firms are still figuring or verifying ledger balances, which, in nearly every instance, are quite satisfactory. Considerable payments are due during the next few days, and these will give a good idea of what trade has been during the holiday season throughout the country, and all hope that these payments may be as satisfactory as in the past, so that the year may open with a clean sheet.

• • •

No year in the past has shown such a volume of business as 1902 in the line of builders' hardware, and there is promise of much in this line in the present year. Locally, the demand has been large. During the past year 150 new houses or buildings were erected, or the construction begun, while many others have undergone extensive repairs. The new Customs building was also begun, and very extensive repairs and alterations were made at the North Street Station, and a large extension to the Blind Asylum was begun late in the year. A new school house on Quinpool Road is also under construction, so that work in this line and the consequent demand for materials is good. The weather has been so mild that building operations have hardly been interrupted, and may not be for some time. Extensive building operations have been general throughout the Province, and considerable is still going on.

• • •

Price conditions in hardware remain practically unchanged so far as the local market is concerned. There is now every inducement for the jobber and the retailer to buy as there is little indication of any relaxation in the generally firm prices, especially in iron and steel.

• • •

The officers of The Maritime Hardware Company met representatives of the wire nail manufacturers in St. John on the 28th ult. Some time ago the latter reduced the price of their product, and it is understood that the former wish to have the prices, so far as they are concerned, remain the same. They claim that formerly they were not receiving as much profit on wire nails as the business demands. The result of their deliberations has not yet been given out.

• • •

The exports from Halifax for the week ending January 3, amounted to $127,350, apportioned as follows: West Indies, $45,560; Great Britain, $36,892; United States, $20,844; South America, $15,485; South Africa, $1,116; Newfoundland, $7,453.

COMMERCE AND EDUCATION.

IN view of the attention that is being increasingly paid to commercial education, especially in England, Germany and America, it seems not improbable that a few years will witness the introduction of business courses into all the more important colleges and universities in these countries. Naturally this movement has come from outside. Educational institutions, as at present constituted, have little in common with the world of business. It is the business men who have realized the advantages which well-organized colleges possess, as places of instruction, and who have come forward and adapted these advantages to their own purposes.

The struggle for commercial supremacy has yearly been becoming keener. At first business was practically chance work. Then knowledge of goods and methods became necessary. Finally, ability has had to be fostered by general and systematic training, and local knowledge has had to be supplemented by an acquaintance with the general commercial structure of the business world. In fact, higher commercial education has been rendered necessary in order to meet the requirements of the times.

This march of progress is readily followed. The teaching of an elementary business course has been for some time carried on in our secondary schools and a more thorough practical training has been afforded in the so-called business colleges.

These courses have turned out good, practical business men with a sound knowledge of correct methods. But they have fallen short in another direction. They have failed to afford an acquaintance with the great underlying principles of the structure and organization of modern industry and commerce.

Naturally, this training cannot be supplied adequately in secondary schools. It is the work of special colleges and of universities, and the time is now ripe for the development of commercial courses in these institutions.

Commercial undertakings are conducted on a far larger scale to-day than ever before, and it has become more and more necessary for their promoters to be thoroughly grounded in the economic principles underlying them. This should be the main work of those higher institutions.

A valuable example of the practical application of these theories is afforded by the London School of Economics and Political Science, which was founded in 1895. Prior to that date commercial education of a university type was an unknown quantity in England. It is true the older universities did afford a training in economics and political science, but it was for no commercial purpose. Their object in imparting a knowledge of these subjects was purely academic and in the interests of learning in general.

On the continent, French students were able to secure higher commercial training at L'Ecole Libre des Science Politiques, and in Austria, Germany and the United States, many of the universities devoted considerable attention to it. Indeed, definite commercial courses were established at many of these institutions.

From the standpoint of industrial training, greater progress had been made. Already numerous highly-endowed technological institutions had been established. In fact, the laborer was in a far better position to improve his technical knowledge than the director of that labor was to better his hold on the commercial world. If the laborer and director of labor were to continue relatively on an equal footing of development, something would have to be done to provide the latter with means to improve his position. To meet this end the London School of Economics was established.

When it was first organized, the London School of Economics had little if any connection with the University of London. The arrangement under which it became the commercial faculty of the university is of a very recent date. Accordingly, up to a short time ago, no degrees could be granted to students who passed through the School. The unfairness of this is apparent. Many students undertook "a severe course of training, sacrificed their leisure and involved themselves in considerable expense in order to attend egularly the lectures and classes at the School; but at the end of their course they have had no certificate, diploma or degree, which they could produce as evidence of their attainments." Under the new regime they will receive degrees in science from the University of London (B.Sc. and D.Sc.)

The School was and still is fostered by the Technical Education Board of the London County Council. During its first year the Board granted it £500. Next year this sum was increased to £1,200 and now, under the new arrangement, £2,500 of the £10,000 granted to the University, goes to the School of Economics. In May of last year a handsome new building was formally opened by Lord Rosebery, Chancellor of the University and President of the School.

Since 1895 over 1,500 students have attended the School, and last session 540 were enrolled on the books. Of these over 80 per cent. were drawn from the professional and business classes. A certain number attended from the colonies and the United States. About a quarter of the total number were university graduates.

Mr. W. A. S. Hewins, Director of the School, writing in The Young Man, explains how the programme of work is arranged: "The lectures and classes at the School have been arranged with a view to the needs of particular callings. It has been found by experience that a basis of sound scientific training is required for successful work in any of the special departments of the School, such as railway administration or banking. Students in these and similar departments are therefore encouraged in every way to attend the established courses of the School which deal with such subjects as the following:

"1. The general structure of modern business and the general features of modern, industrial and commercial organization.

"2. Explanation of the terms in ordinary use in the discussion of economic, social and commercial problems, together with the leading principles of economic science.

"3. The methods of statistics, with special reference to trade and commerce, imports and exports, or administration.

"4. Economic and commercial geography.

"5. Economic and commercial history.

"6. Commercial and industrial law.

"The choice of special subjects is made with reference to the objects which the students have in view, the profession or calling in connection with which they desire to avail themselves of the scientific training provided by the school. It may be mentioned by way of illustration that the railway courses, in addition to those enumerated above, include the following:

"1. The economics of railway administration; the basis of rates; meaning of the phrase 'cost of carriage'; how rates are fixed; the relations between the railways and the Government in different countries; English, French and American systems, etc.

"2. The development of the means of transport, with special reference to railways.

"3. Special railway problems.

"4. Engineering questions in relation to railway administration.

"5. The law of transport."

The example of London has been followed recently in Manchester, where, at a meeting of merchants, presided over by the Lord Mayor, it was resolved to form a committee to establish a fund sufficient to yield £500 a year for 10 years to support a faculty of commerce in the University of Manchester.

In Canada, our own University of Toronto has been making an effort to provide higher commercial education. For some time the Political Science course in that institution has been giving a practical turn to its teaching, and during the session of 1901-1902 a regular commercial course was instituted.

NEW WHOLESALE HOUSE FOR TORONTO.

TORONTO is to have a new wholesale hardware house. The style of the firm will be The Kennedy Hardware Co., Limited, and a charter has been applied for.

The directors of the new company are S. R. Kennedy (president), J. J. Maclennan (vice-president), A. B. Cunningham and T. G. Scott.

The capital stock will be $100,000.

S. R. Kennedy, the president of the new company, has been in the hardware business about 29 years, 21 years of which were spent on the road travelling for such houses as M. & L. Samuel, Benjamin & Co.; H. S. Howland, Sons & Co., Limited, and Lewis Bros. & Co., Limited. He has just severed his connection with the last-named firm.

The building at No. 49 Colborne street, occupied by T. Wallbridge & Co., has been leased by the new firm, and possession will be taken about January 15. Travellers will be on the road about March 1.

PRESIDENT SCHWAB WANTS HIS SHARE.

President Schwab of the United States Steel Corporation, according to his secretary, Mr. Wrenn, has cabled that he desires to subscribe for the maximum number of shares he is entitled to under the employes' profit-sharing plan. He will get 60 shares.

Mr. Schwab is now a large owner of both the preferred and common stocks of the Steel Trust. In his affidavit filed in the suits brought to restrain the stock conversion plan he swore that he had sold bonds of the corporation to invest the proceeds in the common stock.—New York Journal of Commerce.

INDUSTRIAL GOSSIP

THE Peterboro', Ont., Cordage Company, which has been running since last October, has now 150 men on its staff, and 300 tons of twine in reserve for next season's trade. It is expected that the staff will be increased to 200 hands.

Listowel, Ont., has voted in favor of taking over the local electric light and waterworks.

Port Hope, Ont., voted $10,000 for the establishment of The Standard Ideal Sanitary Company's works.

The St. Lawrence Light, Heat and Power Company, Three Rivers, Que., are applying for incorporation.

Goderich, Ont., has carried three by-laws, public library, mill exemption, and knitting factory exemption.

The Humber Power and Light Company, Limited, has been authorized to increase its capital from $50,000 to $100,000.

A delegation from British Columbia will wait on the Federal Government on the 15th inst., to ask for an increase of duty on lead and lead products.

Belleville, Ont., voted on Monday in favor of a bonus to Kirkwood & McKinnon, who will operate the iron and steel rolling mills at that place.

Dunnville, Ont., has voted in favor of loaning $15,000 to J. D. Pennington, of Dundas, Ont., who is to start a refrigerator and woodworking factory, employing over 60 hands.

Waterloo, Ont., has voted in favor of a by-law to grant Schierholtz & Co. a loan of $5,000, a free site, and tax exemption for ten years, so the latter will now build large upholstering and frame factories.

The Empire Limestone Company, of New York, is authorized to embark in the cement and stone business in Ontario, with a capital of $600,000. William M. German, M.P., of Welland, is appointed the company's attorney for Ontario.

Collingwood, Ont., carried the county good roads by-law; a by-law to grant a bonus of $25,000 to the wire and nail factory; a by-law to buy for $25,000 the Toner & Gregory mill property, and a by-law to expend money to improve the harbor.

Barrett & Co., Quebec, have decided to construct and operate a large pulp factory in the district and have awarded the contract for the building of a dam to Thomas Power, of Levis. The dam will be 22 feet high and its construction is estimated to cost about $15,000.

An Ottawa despatch says that much interest is taken there in the announcement that the Canada Atlantic Railway is to extend its line and increase its capital. It is said that Mr. Clergue is interested in the extension of the C.A.R. for an opening to his works, and that he is behind the proposition to build the line which will connect the Canada Atlantic directly with the Western trade.

F. H. Clergue does not seem to be much affected by the general feeling of anxiety regarding the works he has organized at Sault Ste. Marie, Ont. He made the following statement on Monday: "Every branch of the works will be pushed forward to completion as rapidly as possible. Thirty million dollars of American capital has been sunk in the enterprise, and I am confident that not a single dollar will be lost. The works are now in such a position that with or without me they will work themselves out."

A charter has been granted by the Ontario Government authorizing The Belleville Portland Cement Company, Limited, to engage in all the various lines of business connected with the manufacture of Portland cement, with a share capital of $2,500,000. The provisional directors of the company are Frederick Reilley, H. M. Morton, W. J. Phillips, N. Sweetman, and T. Croucher, all of Toronto. The company will operate on extensive marl deposits in the county of Hastings, and have its head offices at Belleville.

The Vulcan Iron Works are applying for incorporation as The Vulcan Iron Works Company, Limited, Winnipeg. The capital stock is to be $300,000.

FENCES and GATES

IN WIRE AND IRON.

We can furnish anything required from a plain wire fence for the farm to an ornamental iron fence for residence or public building. Special prices to hardware trade. Send for catalogues.

The Dennis Wire and Iron Co.,

LONDON, ONT.

HEATING AND PLUMBING

HEATING AND VENTILATION.

A MODEL system of heating and ventilation has been adopted in the new high school building at Worcester, Mass. The building is warmed by hot water under a forced circulation, of the direct radiation class, with the air supplied for ventilation only. The building is a three-storey and basement structure, 109 x 156 feet in plan, and contains 37 rooms, exclusive of a large assembly room and the basement. It has six entrances, four giving access to both the basement and the first floor. The basement rooms are occupied only for short periods and are not provided with special means for ventilation, except the main lavatories, from which separate vent passages are furnished to prevent a diffusion of the air from those rooms into the rest of the building. The apparatus for heating and ventilation has been located in the centre of the basement. The ventilating system has been designed to supply and exhaust about 40,300 rubic feet of air per minute. The total number of seats in the school rooms is 1,240, so that the per capita supply of air on this basis is about 32.5 cubic feet of air per minute, 2.5 cubic feet above the State requirement. In the case of the assembly hall air is delivered through eight fresh air openings, aggregating 48 square feet in gross area; with a velocity of 100 feet per minute through the openings, on the basis of the gross area scale, 32 cubic feet of air can be supplied per minute per person, with 600 people in attendance. This means with 1,200 people, the full capacity of the hall, that 15 cubic feet are delivered per capita per minute. On account of the short periods of occupancy, it was not considered justifiable to make provision for greater air-supply.

The air for the ventilating system is received through basement windows in the front of the building into a cold-air chamber walled off from the girl's recreation room, and is then carried in an underground passage to the tempering chamber. From the tempering stacks it is received by the blower and then discharged through a system of ducts and flues to the openings in the rooms. The tempering surface consists of indirect radiators supported in two tiers on the irons and pipe standards, comprising altogether 12 stacks of 18 sections each, and aggregating 1,320 square feet. As the blower is designed to handle 40,330 cubic feet of air per minute, 560 cubic feet of air are passed per hour per square foot of the tempering stacks.—Engineering Record.

BRISK BUILDING YEAR IN TORONTO

While not yet up to the most active year in the "boom" days, the past year has been one of unusual activity in Toronto building circles. The permits issued during the year total up to $3,834,923, against $3,568,883 in 1901, when the permit for the $1,000,000 King Edward Hotel was taken out. This makes a record figure, except in 1891, when permits for the new city hall were issued. Everything considered, it is fair to infer from the returns that there was more building done in Toronto during 1902 than in any other year of the city's history. And, as the demand for good plumbing work is steadily growing, the cause of the brisk plumbing season is not hard to discover.

BUILDING PERMITS ISSUED.

QUEBEC.

G. Matte, for a brick building, to cost $2,500.

LONDON.

The first building permit of the year was issued Saturday to H. C. McBride, architect. It was for alterations to three stores, the property of Mrs. H. R. Ives, of Montreal, and situated on the south side of Dundas street, near Richmond street.

MONTREAL.

W. J. McGuire & Company, plumbers, etc., etc., Montreal, have 15 contracts under way at present.

Ballantyne & Co., St. Antoine street, Montreal, report the jobbing trade brisk, but as regards new contracts, they are exceptionally quiet at present.

TORONTO.

D. Schwalm, pair of dwellings at 176 and 178 Ossington avenue, to cost $4,000.

Charles Delaney, factory, near King street, to cost $1,200; W. F. Petry, builder.

Acme Loan and Savings Company, for dwellings at 191 and 201 Shaw street, to cost $10,800.

W. A. Clark, dwelling, near Dupont street, on Walmer Road, to cost $2,800; W. McBean, architect.

Metropolitan Bank, for alterations to building, corner of Bathurst and College streets, to cost $1,500; Darling and Pearson, architects.

BUILDING NOTES.

A PROJECT is under way to erect a hotel in Montreal, at a cost of $1,500,000.

Beaverton, Ont., has voted in favor of a new town hall.

About $2,500 is to be spent on a new bridge in New Hamburg, Ont.

A 75-ft. addition is to be built to the Owen Sound, Ont., freight sheds.

A new locomotive works will be built at Longue Point, which will employ 600 men and turn out 100 engines annually.

Lord Strathcona has offered to give $20,000 towards the construction of a $100,000 gymnasium at McGill University.

The plans for the Victoria Hotel, Quebec, prepared by J. R. Resther & Son, architects, Montreal, call for a $150,000 building.

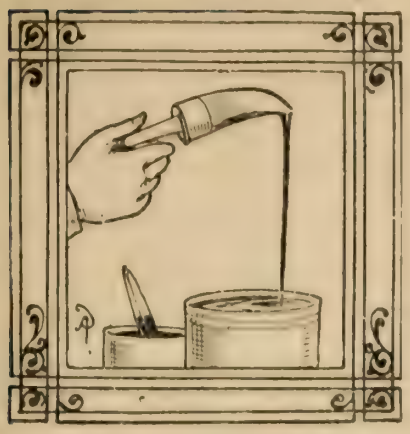
The Montreal Amateur Athletic Association will build a new club house in the spring on Peel street. It will be 175 by 133 feet, and will be complete in every respect.

W. & D. Stewart have completed plans for 40 new houses to be erected about the new Deering Works near Hamilton. All will have bathrooms and other modern improvements.

The plans for permanent freight sheds on the wharves at Montreal were considered by John Kennedy, harbor engineer, and the transportation representatives. The plans, from railway and steamship standpoints, were considered satisfactory.

During 1902 there were 727 dwellings, 30 stores, 13 warehouses, 27 factories, seven churches, two educational institutions and one hospital erected in Montreal at a cost of $2,664,147. In repairs and alterations $425,587 was expended, making a total of $3,089,734.

It is rumored that a new hotel will be built in Montreal the coming summer. It will be called the Grand Central and will be built on Victoria Square. The building will be six storeys high, and will be built of white cut stone from Quebec Province, with polished red granite pillars, the entire design being French renaissance, and presenting a beautiful, imposing and artistic appearance. The building will be surmounted by a handsome tower, containing three clocks, and the distance from the sidewalk to the top will be 200 feet. The plans will be for 480 rooms, and the house, when completed and furnished, will represent a capital of $2,000,000.



YOUR PAINT TRADE

is worth looking after. It's getting to be one of the big money finders; helps other things at the same time.

The right paint at the right price, with tasty "ads" and show cards, brings people to your doors.

Try "**Ramsays Paints**" for 1903, the oldest and best in Canada—best for price, best for quality, best for your customers and satisfaction to yourself.

We're not bragging about our big gains for 1902; that end can talk loud for itself, we're after you for **1903**.

SUPERIORITY OF THE SHOWER BATH.

THE following comparison of the value of the shower-bath as compared with the tub-bath is taken from a paper by Walter W. Thomas, of the Liverpool Corporation Baths' Committee.

"The utility of a bath for the people may be considered from three points of view: 1. The best medium for cleansing the body; 2. as providing for the comfort of the bather, and 3. as the economics of the system. What we have to do, firstly, is to thoroughly cleanse the surface of the skin. That being so, the shower-bath is the best medium. The water from the ring shower of a shower-bath falls in a gentle circular shower on the shoulders of the bather, the bather commences to wash at his head and washes down his body, finishing the washing at his feet; while this is proceeding the soiled water is carried away in the drain.

"So far so good, but now comes the special advantage of the shower. Up to the finish of the cleansing operation only warm water has been used. The bather now takes hold of the two handles controlling the warm and cold water; he gradually open the cold and closes the warm supplies until the cold is full open and the warm closed, thus securing for himself the most invigorating tonic that it is possible to obtain, and after the pores of the skin, which have been opened by the warm water and the washing are closed, he is in a fit and proper condition to have his rub down and put on his clothing.

"Now, it will be perhaps well to show why the ordinary tub-bath is not equal to the shower. Imagine a man who has been employed in some dirty occupation and whose body has to some extent, owing to perspiration been rendered filthy by contact with his work. This man takes a hot tub bath, and what is the result? He gets into the bath, soaks himself, and washes the dirt off his body, which, in consequence thereof becomes part of the liquid he is bathing in. It is an impossibility for that man to leave the bath clean. He has simply fouled the water and bathed in it.

"The comfort of the bather is obtained by the following means—viz.: Cleanliness and cheerfulness of the bathing establishment, plenty of light and air, pure atmosphere kept at a proper temperature or temperatures, privacy, proper waiting-rooms, dressing-rooms, and bathrooms.

"In comparison with the tub-bath the shower-bath is by far the most economica, giving both a dressing-room and a bathroom. It occupies only half the floor space of an ordinary slipper bath-room, and therefore the building cost per spray and shower-bath is considerably less than per ordinary slipper bath. The cost of maintenance is also very much reduced. The ordinary slipper bath consumes on an average 50 to 60 gallons of water, not including the shower, where one is attached; the shower and spray-bath, even when most lavishly used, does not consume more than 10 gallons of water. In some situations the quantity of water consumed is of vital importance, particularly when a dry season like last year is experienced; but even to those places that are blessed with an abundant supply of water the quantity of water used is of great importance, inasmuch as the cost of fuel for heating must be five times greater for the tub-bath than it is for the shower-bath."

TO REMOVE TARNISH FROM BRASS

We have been asked several times for a receipe for removing tarnish from fine brass articles, when it would not give way to an ordinary polish.

We offer the following: Take a strong oxalic acid, and rub on freely, let stand for one minute and wash off with water. Polish with an ordinary brass polish.

To turn brass a golden color, take a solution of hydrochloric acid, and alum. Dissolve in water; steep articles for 15 or 20 seconds.

PLUMBING AND HEATING NOTES.

Guelph, Ont., has voted in favor of the installation of a civic lighting plant.

Vincent King, who conducted a plumbing business on Beaudry street, Montreal, died at his home after a brief illness on Friday last.

A young man of exceptionally keen sense of smell is employed by the gas companies of Buffalo to locate leaks in their pipes. Recently he found a leak for which other men had been looking for eight years.

The Stratford, Ont., Water Supply Company have offered their plant to Stratford for $98,000. An expert employed by the city has valued the works at $110,-057, so a by-law to endorse the purchase of the works will be submitted.

A correspondent in Amherst, N.S., writes that as an excellent sewerage system has been installed in that town, all houses now being built there are having bathrooms, etc., installed. The past year has been an unusually busy one for the plumbers of the place.

TO CLEAN ENAMELLED WARE.

It often happens that the droppings from a nickel-plated pipe, or indeed from a brass pipe, stain an enamelled bath, says an exchange. It is not easy o clean stains off enamelled ware, but in this instance it will be found that a complete polish can be obtained with oxide of tin. There are other means of doing this, but the glaze of the enamel would be destroyed in almost every other instance.

WILL STAND BY AGREEMENT.

At the last meeting of the Plumbers' Supply Association, held last week, the following resolution was passed: "Resolved, that each member notify all his travellers, agents, etc., that associational prices are now firmly enforced and must be rigidly adhered to."

Our Line of Hardware Specialties. is Worthy of Your Consideration.

It is replete with trade producers that will increase your business and your profits.

One of its many features is the most varied line of **GAS and ELECTRIC FIXTURES** ever offered—superior goods and remarkably low prices.

In addition to a complete display of stock patterns we can design any special pattern for which there may be a demand.

Line and prices are both worth your consideration—both worth carrying. Let us submit prices.

GOOD ADVERTISING.

Notes by Miss Nora Laugher, Toronto.

MAKE up your mind to turn a new leaf and to put a bright ad. on that new leaf. Start the new year with the idea that you are going to handle the advertising proposition in an intelligent and businesslike way. See wherein business can be pushed most profitably, and put all the vigor and vim you can into advertising to bring that business. You have doubtless gained much experience in the past year, so that the foundation is well laid. Take stock mentally, as it were, look back to the many old mistakes and rectify them. Off with the old stereotyped formulae. Don't be conventional, stiff, unnatural in your wording of ads. any more than you would be in your talk. Talk to your neighbor. That's the finest and best way to convince him.

* * *

Off with the old, on with the new—new ideas, new announcements, progressive methods, more modern business plans. This is pre-eminently the age of progress, and the firm that lags and loiters in the race for business will soon be forced to drop out and the place will be filled by those with 20th century methods. You should start the new year with the intention of making a success with your advertising. Start early and stay persistently with it until the end.

* * *

Your advertising must be better this year than it was last year to be as good as it was last year, because everything in all lines is growing better and better. Every year must show an improvement. This is evolution. Remember nothing can stand still. If your advertising is not going forward it is going backward.

* * *

If 90 years ago advertising had been the science it is to-day, hundreds of people in the coal trade would have retained their wealth instead of losing it in their efforts to introduce anthracite coal. At that time a few blacksmiths in the Alleghany Mountains knew that the hard "stone coal," as it was called, could be burned, but people in Philadelphia, the likeliest market for the new product, could never succeed in getting the coals lit. Many barge loads of the stubborn stuff were sold, but as no one could make use of his purchase, the seller was arrested for fraud and the coal dumped into the street and used for macadam. So soft coal remained in favor. After much money and time had been wasted thus, a man who believed in advertising went to Philadelphia with a barge full of anthracite from his own mine, built fires in the common grates and stoves in public buildings, and invited everybody to come round and learn how the trick was done. Furthermore, he distributed circulars explaining the process. "Put wood under the coals, light it, then leave the fire alone," was his motto, for folks had sought to make hard coal blaze like pine kindlings. As a result, a few people began using the commodity and real merit got its reward—by advertising for it. Not how to burn coal, but how not to burn it is the burning question of to-day when coal and coal advertisements are at a premium.

* * *

Marvellous changes have been wrought in the business world during the last decade, and these changes well illustrate the passing of the middleman. Half a century ago the manufacturer marketed his product through the jobber; the jobber then sold to the wholesaler, the wholesaler to the retailer, and the retailer to the consumer. The producer and the consumer were as widely apart as though they belonged to different hemispheres. The manufacturer was crippled in a helpless, hopeless position, while the producer was at the mercy of the jobber. While the middleman is to-day hardly as extinct as the buffalo, yet producer and consumer have gravitated towards each other, and this change has been brought about solely by the advertisement. It is the little ad. that has exploded the old idea of big profits and small volume. Small profits and large volume are the chickens hatched by the good old advertising hen.

"Ring out the old—ring in the new," especially in the case of old-style or shop-worn goods. Wise merchants prefer to see their store full of bargain-hunters carrying off goods at cost rather than to give shelf-room year after year to old relics of bygone fashions. Move the goods on. Get into stock the goods there is demand for, but above all present them to the public by means of crisp, natural talk-to-people kind of advertising.

From Providence, R.I.

RECORD SHOOTING.

On January 1, Mr. Harry M. Pope, with one of Stevens, with a "Stevens-Pope" barrel, succeeded in breaking both the 50 and 100-shot world's records on the standard American target at 200 yards off-hand, with a full score of 100 bullseyes. The former 50-shot record of Dr. W. G. Hudson was 462 points, and this was raised to 463. The 100-shot record of 900, also Dr. W. G. Hudson's, was raised to 908.

The shooting was done at the first shoot of the year, under the auspices of the Rod and Gun Club of Springfield, Mass., and the weather conditions were perfect.

FIRES.

The stock of Thompson & Livock, hardware merchants, Ottawa, was damaged by fire.

B. H. Kerr, grocer and hardware merchant, Milltown, N.B., has been burned out ; insured.

DEATHS.

W. M. Beattie, contractor, Winnipeg is dead.

HOWLAND'S TEAM THE VICTORS.

The opening game of the Toronto Commercial Hockey League was played on Wednesday night at Varsity Rink before a large crowd of spectators, when H. S. Howland, Sons & Co.'s team defeated their old-time rivals, Rice Lewis & Son, Limited, by 6 to 4. The ice was in good condition, and a fairly fast game was played, considering the small amount of practice each team had, owing to the continued mild weather. H. S. Howland's team won the toss, and defended the west goal. The play was fast at the start, and Cotton notched up the first goal for H.S.H. The score at half-time was 3 to 2 in favor of Rice Lewis & Son, but the second half found the Howlands in the better condition. They added 4 goals to Rice Lewis' 1, leaving the score at finish 6 to 4. The stars for Howlands were : Gillespie, Cotton and E. B. Ryan, in goal, while Stains and McCaughey did splendid work on the forward line for Rice Lewis, with Mr. Gooding a star on the defence. W. A. Hewitt refereed to the satisfaction of all concerned. The teams :

H. S. Howland, Sons & Co., Limited—Goal, E. B. Ryan; point, E. Butler; cover, Geo. Mitchell; forwards, Cotton (captain), Gillespie, H. Aikens, G. Begam.

Rice Lewis & Son, Limited—Goal, Bremner ; point, Webber; cover, A. Elford; forwards, H. Stains, McCaughey, Braizer, Chappelle.

Referee—W. A. Hewitt. Timers—Roy and Durnan. Goal judges—Ward and Vokes.

STOCKING UP.

Most dealers begin after the first of the year to look about to see what are the makes in the various lines of goods carried wherein are the best profits. It occasionally transpires that a dealer will select an inferior line for the sake of a small extra margin of profit. But once show a dealer that he can carry the very best goods on the market and at the same time realize from them as large or larger profits than from inferior lines, and he will at once see that this is by all means the best policy to pursue in the building up of a permanent trade. The products of The United Factories exactly meet these conditions. Boeckh's, Bryan's and Cane's goods are always thoroughly dependable and will hold trade and at the same time yield a larger margin of profit than any other.

To good management men and tools, add Apollo galvanized iron.

There is no way to do so good work or to make so much profit on it.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

"Peerless Iceland"

THE BEST OF GOOD FREEZERS.
COVERED GEARING. ONE MOTION.

THE FREEZER FOR 1903.

Wonderfully Simple IN CONSTRUCTION.

Simply Wonderful IN RESULTS.

SEND FOR BOOKLET.

ARE YOU IN DOUBT?

Have you decided what line of freezers to stock for the approaching season? If your decision is based upon merit you will undoubtedly prefer the **"PEERLESS ICELAND,"** the freezer for which all wide-awake merchants are placing their orders.

HAVE YOU INVESTIGATED the merits of the "PEERLESS ICELAND"? Unlike most freezers it is simplicity itself owing to the few parts in its construction, at the same time accomplishing better results. The stationary dasher is the main feature, making it a one-motion freezer; one motion being all that is required for the effective freezing of smooth, delicious ice cream.

HAVE YOU PROSPERED in your freezer business during 1902? If not, the fault perhaps lies in the line handled. "PEERLESS ICELAND" FREEZERS will insure profitable returns. No other freezer is more extensively advertised, no other freezer is in greater demand. Specify your wants now while prices are favorable, past experience shows that prices generally advance with the season.

Supplies for the Maple Syrup Season.

Sap Buckets . . .

—EXTRA DEEP AND STRAIGHT.
—THREE SIZES.

They possess many advantages over the ordinary flaring Buckets—being small in diameter they do not catch the rain or snow, and as they are very deep, they hang perpendicularly, and consequently will not overflow until full.

—Covers supplied if required.
—They nest close for shipping or storing.

We can also supply the ordinary Flaring or Western Sap Pails.

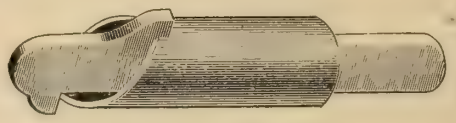
E. T. Sap Spouts.

MADE OF RETINNED STEEL—STRONG AND DURABLE.

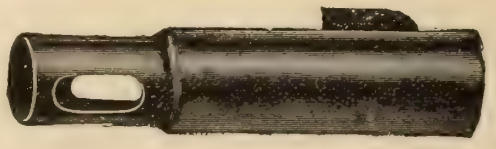
Only require a ⅜-in. hole in tree.

It does not cover the inside surface of the hole; therefore a larger amount of sap is obtained.

Packed in card-board boxes.



Maple Leaf Sap Spouts.



Made in Bronzed Steel.
Require a ½-in. hole.
Has a shoulder which prevents it being driven in too far.
The hole in the tree is not exposed to wind and snow; consequently, sap will flow longer.
Packed in card-board boxes.

Syrup Cans, round or square.

Plain or decorated. Made in ¼, ½, and 1 gallon sizes.
Either Wine or Imperial Measure.

A full stock carried in all lines; orders shipped promptly.

EUROPEAN RAIL CONVENTION.

IN view of the controversy aroused by the purchase of German steel rails by Mackenzie & Mann and the proposal to levy a duty on foreign rails, the business methods of German and other European railmakers should be understood by the Canadian public.

For some time the German rail-producers have had a syndicate, the prime object of which is to maintain prices on the home market at a satisfactory level, which has been no easy matter owing to the industrial crisis there. To do this it is, of course, advantageous to export as many rails as possible. To do this the syndicate has provided a fund, contributed to by its members, from which a liberal bounty to any manufacturers sending rails to a foreign country will be paid. The exact amount of this bounty is not known to outsiders, but it is believed to be about $6 per ton.

Now, according to a German paper, a scheme is being promoted for the formation of a rail convention between the rail-producers of Germany, England and Belgium. The German works interested in the question include such well-known companies as the Bochum Union, the Dortmund Union, Krupp, Phœnix, Horde, Hosch, Wendal and Co., the Rhenish Steel Works, Stumm Bros., the Dudlingen Ironworks, Deutscher Kaiser and others, and these have formed a central export bureau, to which all inquiries for rails from abroad will be forwarded by the companies concerned.

It is safe to presume that such a convention, when thoroughly organized, will not fail to take steps to conserve its own interests and to the disadvantage of railmakers not included in its membership.

ADVANTAGES OF TRADE JOURNALS

WHEN the business of a merchant has reached such a point that everything runs smoothly, the merchant should be able to afford a few spare moments to spend in study and thus advance his views and broaden his understanding so that he will be able to take a more prominent part in public affairs and devote his energies to better advantage in the service of the State. And no merchant can better himself more than by reading the various trade periodicals, weekly or monthly, which are issued for the benefit of each branch of the trade.

He should not confine himself to one trade paper alone, but should take two or three. Thus his views may be widened and his powers of thought stimulated and expanded. The more he knows about his trade the better, and a well-informed man has an air of culture about him that makes his personality attractive.

He should not wait until his trade is quiet before reading the various trade periodicals that come his way, but should endeavor to advance his views at every opportunity, and take time to study the market reports and the articles on the successful methods of conducting business that are to be found in these periodicals.

By watching the accurate market reports in the trade publications much money may be saved in buying and selling. There may be indications of an advance in price of some commodity which these papers will report, and the merchant being forewarned is often enabled to buy to advantage before the advance takes place. And, also, there may be indications of a decline in some article which, if the merchant beforehand perceives, he may dispose of his surplus stock by a special sale before the depreciation in price takes place.

As a proof of the advantage the reading of trade periodicals is to the merchant, it may be pointed out that those who make a practice of reading them are always enthusiastic in their praise.

COAL AS A RECIPROCAL POSSIBILITY.

IF there is one article of merchandise in regard to which Canada and the United States should be able to enter into reciprocal arrangements it is coal. In many other articles there is a conflicting of interests. The manufacturers in the United States want, for example, easier access to the Canadian market. The manufacturers in this country, on the other hand, favor legislation that would have the very opposite tendency. The same principle actuates the farmers on both sides of the boundary line.

In regard to coal the same difficulties do not exist, or at any rate in so pronounced a form.

In the New England States the manufacturers and gas-making concerns find it necessary to draw upon the mines of Nova Scotia for a great deal of their bituminous coal in spite of a duty of 67c. per long ton. This is on account of the great distance they are away from the coal fields of Pennsylvania. A duty of 67c. a ton is even less of an obstacle.

Ontario, on the other hand, is wholly dependent on the coal mines of Pennsylvania, Ohio, and West Virginia for its supply. Nova Scotian coal is a perfect stranger in Ontario. Some years ago a cargo did reach Brockville, on the St. Lawrence, but it was the only one, while Toronto, Hamilton, and other cities in the western part of the Province never saw a pound of Nova Scotian coal. Not even during the recent period of scarcity was it in evidence.

Here then is the chief manufacturing Province in Canada dependent on the coal of the neighboring republic, while the chief manufacturing States in the American Union find their natural source of supply in Nova Scotia. On the Pacific Coast the natural source of supply is the coal mines of British Columbia.

The tariff on butuminous coal in both countries has protection to the home product as its object. There is no doubt about it. But as far as the coal trade between this country and the United States is concerned, the respective tariffs can scarcely be termed protective. They may be revenue producing, but that was not the expediency that brought them into existence. It is obvious therefore that the revenue is the only thing that would suffer in either country should the tariff on butuminous coal be concurrently removed.

Last year Canada imported from the United States a little over 3,000,000 tons of butuminous coal, valued at $5,627,695, while her exports to that country were 1,589,469 tons, valued at $4,318,681. Of anthracite coal, on which there is no duty, we imported from the United States 1,652,451 tons, valued at $7,021,939.

The action of Congress, on January 14, in adopting a Bill allowing a rebate for one year on all bituminous coal imported into the United States should make a reciprocal arrangement between the two countries more possible. In the meantime the Dominion Government, as an evidence of its good intention, should take advantage of the authority given it under the Customs Tariff of 1897, to reduce the duty on United States bituminous coal to 40c. per long ton. The present duty on the long ton is 60c.

The Toronto World objects to reciprocity in soft coal, because it would be an interference with the principles of protection. Is the editor not a bit crude in his notions of protection?

The two chief elements of protection are (1) a tariff on goods that could be manufactured in the country; (2) a free list for raw material that has to be got out of the country. Soft coal is a very important element to our manufacturers.

RED TAPE AND MISTRUST IN THE POST OFFICE.

SIR WILLIAM MULOCK, as Postmaster-General, has made many useful and important changes in the administration of his Department, but there is something for him to do yet. We laugh at the amount of red tape and the absence of common sense among the permanent officials of the British Post Office Department, but are we any better here?

A leading manufacturer recently went to considerable expense for an attractive catalogue—one that was a credit to Canadian enterprise. It was important that it be put in the hands of those interested in as neat and clean a condition as possible. He had special boxes made for it—an additional expense.

When it was taken to the post office he was first informed he must pay double postage, on account of some technicality on which a recent ruling had been made. He was prepared to pay that. Then the post office officials said the catalogues could not be sent out unless the box were open at both ends, so that they could see the contents. The manufacturer offered to go before a magistrate and swear that there was nothing but a catalogue in each package; but that had no effect. Then it was suggested that the post office people might open a package here and there in the lot to satisfy themselves, even if they would not believe a reputable manufacturer under oath.

"Very sorry," was the explanation, "but you know we have never done that," in a tone that meant that therefore it never could be done.

The catalogues now lie in the manufacturer's office addressed, but still unmailed.

Any business man will buy a whole carload or several carloads of cheese or butter or grain or other commodity without even looking at it on the basis of a small sample package—often supplied by the seller. Post Office rules forbid any such common sense principle, even when the authorities actually handle each individual package.

How much more business-like is the way the Customs Department deals in matters of that kind—in circumstances where it is of far greater importance to know the contents of a package, so that there will be no fraud on the revenue. In the case of the ordinary business man only a package here and there is opened—often a whole shipment is passed for a well-known importer without even being looked at.

A foreign invoice is accepted by the Customs Department, but the oath of a well-known Canadian manufacturer is refused by the Post Office officials.

LEAD MINERS AND CONSUMERS.

THE question of placing a higher rate of duty on lead has been brought more forcibly than ever before the large dealers and consumers of Canada by the arrival in Montreal on January 9 of a deputation from British Columbia representing the lead-mining industry of the West.

The deputation consists of Mr. John L. Retallack, of the Lead Silver Miners' Association of East and West Kootenay; Messrs. Geo. Alexander and Geo. D. Potter, of the Lead Miners' Committee, and Mr. G. O. Buchanan, who represents the various Boards of Trade of the Kootenays. At a meeting of lead miners in Sandon, B.C., a resolution aiming toward a higher tariff on lead was passed, which this deputation will support.

They looked for the support of the paint manufacturers, lead pipe manufacturers, etc., in the east, and in a measure they have it. Before they stated their case the general feeling among those interested in the industry was in favor of the Western gentlemen; but it appears that the duty which they will ask the Government for is much higher than would be approved of in the east. The visitors desire a duty of 1½c. per lb. on lead ore, 2½c. per lb. on lead in bullion, and 2½c. per lb. on lead sheets, pipe or shot.

On the other hand, the Montreal manufacturers would want no more than ¾c. per lb. on lead pipe, plus the present duty of 35 per cent.; on dry white lead 1½c. per lb., and on red lead and litharge the same.

The ¾c. per lb. on pig lead which the eastern lead consumers ask for would mean a protection to the Western miners of about 30 per cent., which, in the opinion of Eastern Canada lead consumers, including manufacturers of lead pipe, shot, dry white lead and white lead ground in oil, is enough. The duty which the mining men want would amount to about 75 per cent., which, considering that freight rates from British Columbia east are much greater than those from Great Britain, Germany or the United States, would place the manufacturers of Canada in a bad position.

There are other considerations which weigh with the manufacturers in deciding against an excessive rate of duty. The result of a high tariff in the United States has been that, while the lead business has passed out of the hands of the paint manufacturers and into those of the lead producers, the same would, perhaps, be the case here if the high tariff under which the lead miners wish to work were put into force.

Speaking to a representative of this paper on the subject, one large paint manufacturer said: "As manufacturers, we, of course, believe in ample protection to all Canadian industries that are worth protection, and we sympathize with the Western lead-mining people to a certain extent. The Government has been more than once asked to aid certain industries, which could never be put on a paying basis in this country, and I am glad that they refused. As regards the lead-mining industry in Canada, it is questionable whether it is advisable at this date to attempt to make it a great one by a change in the tariff, which cannot but increase the price to the consumer, and would be a long time before the Canadian market would be sufficient to absorb the present production of the British Columbian mines.

"I think the outside quantity of white lead that could be used in Canada at present would be about 12,000 tons annually. The British Columbian mines if I am not mistaken are able to produce 100,000 tons annually. That means that while they would sell 12,000 tons at as high a price as they could under the tariff, to Canadian buyers, they would be forced to dispose of 88,000 tons on the United States market for they could hardly send any quantity accross the ocean—and on any market outside of Canada they would have to meet the competition of the world. The same is the case in the United States. Foreign buyers get their lead from American manufacturers at about half the price the American himself has to pay.

"No matter what protection the British Columbian mining people get they could not supply Eastern Canada consumers as cheaply as we get the lead now. Although, personally, I am willing to pay a little more for white lead to aid our own mines in obtaining control of this market, if that is possible, I am not willing to be placed in such a position that our Western friends can, if they wish, 'put the screws on us' and make us pay an exorbitant price without having recourse to the American, German or English market. That would be our condition I think if the duty for which this deputation is asking came into force.

"The American lead-mining business is in a comparatively flourishing condition, and it is protection that caused it, so why should not our mines be aided as well? But what I call a protective tariff is one that is high enough to protect the home manufacturer from the foreign, and also low enough to give protection to the home consumer against the manufacturer in his own country."

The delegates met the Montreal branch of the Canadian Manufacturers' Association on Saturday morning and discussed the matter. On Sunday evening they left for Ottawa to interview the Government.

IMPROVE YOUR BUSINESS.

THE stock-taking time of the year is the season when the merchant should also exercise some self-examination as to his methods of transacting business.

He should carefully look over his books, investigating in what lines his sales have fallen off and where they have increased. A remedy should be found for any decline in sales he may have experienced, and care taken to avoid in future the mistakes of the past.

The clerks should be carefully studied and an effort made to improve their weak points and to stimulate them to greater exertions. Ability and merit should be recognized with a substantial reward, and carelessness and extravagance should not be passed over without the possessor being at least admonished to mend his ways. The employer should think out in what way his clerks may be improved and how their faults may be checked and obliterated.

Another thing that should be observed is carefulness in checking off invoices and in receiving goods from the manufacturer or wholesaler. Every article that comes into your store should be counted, weighed or measured. Likewise every article going out of the store should be examined to see that it is what it is represented to be, and that neither too much or too little is being delivered to the customer. Everything, no matter how trifling, should be looked into, and leakages prevented as far as possible. The scales should be kept well dusted and the counters clear.

There will usually be found many other things that need looking after by the merchants during the coming year.

COMMENT ON CURRENT TOPICS.

THE mercury and the price of coal evidently do not desire to keep company these days. As the one goes down the other goes up.

* * *

The National Board of Trade of the United States convened at Washington on Tuesday. It is to be hoped it will exhibit more signs of life than the Dominion Board of Trade, which met in Ottawa last summer.

* * *

The anthracite railroads lost, it is computed, $57,000,000 during the six months of the coal strike. This alone is sufficient to teach the evil results of strikes. But, unfortunately, this is not the only loss which affected industrial life, to say nothing of the great discomforts that are being experienced in a great many homes all over this continent because of an inadequate supply of fuel.

* * *

It is rather amusing to read some of the letters which the London correspondents of the New York papers are cabling to their respective journal regarding the Bosphorus. "Nothing better, perhaps, could be expected of the Sultan," writes one correspondent, "but Western Europe wants to know, and the inquiry is equally interesting to the United States, whether a pledge given by Russia must hereafter be regarded as subject to any evasion which trickery or subterfuge can furnish." And yet, while these correspondents are so orthodox in their views regarding the international agreement of the European powers touching the Bosphorus, there is a strong movement on foot in the United States to break, in spirit, at least, the international agreement with Great Britain regarding warships on the Great Lakes.

* * *

Mr. A. L. Sifton has been appointed Chief Justice of the Supreme Court of the Northwest Territories. Prior to his appointment he was Commissioner of Public Works and Treasurer of the Territories, appears to be a man of ability, and carries after his name the "terminal initials" of M.A. and LL.B. But it is to be regretted that he is the brother of Hon. Clifford Sifton, Minister of the Interior in the Dominion Cabinet. Not that there is anything to be said against the latter as a man or a Minister. On the contrary, there is a great deal more to be said in his favor than his political opponents are prepared to concede. But the appointment savors of nepotism, although, of course, the appointment comes through the Department of Justice and not that of the Interior. Even the suspicion of nepotism is unpleasant, and it would be better if both political parties avoided its very appearance.

* * *

There was a meeting in Toronto on Monday to discuss church union. With industrial union and church union we ought to be getting near the "harmonious whole"; but then we might find ourselves in a worse hole.

* * *

It is said that Mr. V. Coffee, of London, is likely to get the vacant Toronto Senatorship. He certainly ought to be acceptable to the grocery trade.

* * *

Toronto has a new mayor with a new policy. The latter promises to be vigorous. Whether it will be weak and puny at the end of the term, like other similar policies, remains to be seen. It is to be hoped it will not.

* * *

Mayor Urquhart of Toronto began life as a clerk in his father's general store. His downward path in life, which ended in his election as chief magistrate of the "Queen City," began when he left the store and entered the lawyer's office. But he can redeem himself by conducting the affairs of the city on the same lines as his father did his store—on business lines.

* * *

With the Ontario Government five up and His Majesty's Loyal Opposition five down the Province of Ontario ought to get good Government. A strong Opposition is as essential to good Government as a strong Administration. There may not be much consolation in this for the party five down, but there is for the Province.

* * *

The three-fold wind from the north on January 7 was laden with balm for the Ross Government but with frost for the Whitney Opposition.

* * *

A cable despatch says that Mr. Edison has ordered ore crushing machines in Coatbridge, Scotland, claiming they are cheaper and better than those made in the United States. It is to be hoped that this is not an invention, as newspapermen, as well as men of Mr. Edison's stamp, are sometimes given to invention.

* * *

The lumber mills in the Ottawa district have advanced their prices 10 per cent. Lumber has been getting dearer for some time, which may account for the scarcity of planks in the platforms of the political parties.

* * *

According to the annual report of the Fisheries Department just issued at Ottawa, the pack of salmon in British Columbia last year was 625,982 cases. Although only about half that of last year, one gathers some idea of the labor entailed in putting up that many cases when it is remembered that it meant the catching of over 5,000,000 salmon. There are 11 to 12 salmon in a case.

* * *

Canada, in Federal, Provincial and municipal bonuses and loans, has paid out in cold cash over $228,500,000 to the rail-

A VOICE FROM THE YUKON.

The Yukon Hardware Co., Limited, Dawson, Yukon Territory, writing under date of December 22, say: "HARDWARE AND METAL has been of great assistance to us from the fact that we are always kept posted on the Eastern prices, and we know that it will render us the same assistance in the future."

ways. And yet the railways own the country and not the country the railways.

* * *

Six hundred guests sat down to a banquet of horse flesh, in Paris, one day last week. To a good many it will, no doubt, appear an assinine feast. Apropos of this incident it might be mentioned that, during the ventilation of a case in a Hull, Eng., court the other day, the fact was developed that old and decrepid horses were being shipped to the continent, evidently for the purpose of being turned into sausages and other mysterious food products.

* * *

It is said that there is now a probability that the Bill before Congress to grant reciprocity with Cuba will carry, the beet-sugar interests having withdrawn their active opposition. Why this sudden magnanimity? Is there a consideration or understanding at the bottom of it?

* * *

Sir Wilfrid Laurier has returned to Ottawa from his sojourn at Hot Springs. Although he is looking better, and evidently is better, gossip's tongue is still wagging about his possible retirement. Sir Wilfrid himself laughs at the idea. But men in similar positions have laughed before and retired. His retirement would be a loss to the country as well as to the party of which he is chief. And good men we cannot afford to lose whatever their political stripes may be. At any rate, political stripes are not the man.

* * *

Another tempest in a teapot appears to be brewing in the East. Servia and Bulgaria seem to be preparing for something and Russia's unarmed torpedo boats have passed through the Bosphorus in spite of treaties prohibiting such practices. It is this latter affair that threatens to create the tempest, particularly in view of the fact that Great Britain, one of the treaty powers, has entered a protest. Neither France or Germany, however, have yet made any move in the matter. Furthermore, it is not likely they will. France it will be remembered is an ally of Russia and Germany a particular friend of Turkey. By an agreement with the Powers after the Crimean War Turkey was maintained in her right to prevent warships from passing through the straits in time of peace. And in 1871, under a new treaty, this right was confirmed, although Russia was permitted to build and maintain warships on the Black Sea. But whether single-handed or in company Great Britain is not likely to go to war over the acts of Russia, whereby, in spirit at any rate, the stipulations of the various treaties drawn up by the Powers have been broken. Great Britain has just emerged from one expensive war and certainly will not relish another. And then it is only three or four years since Lord Salisbury told us that in going to war with Russia in 1854 Great Britain had put her money on the wrong horse.

* * *

The powers have notified China that she must pay her indemnity in gold. And it looks as if she will have as much difficulty in finding the yellow metal as most of us have in finding money to pay our coal bills.

* * *

Great Britain's foreign trade during the past year increased by £6,870,086 in imports and £3,517,604 in exports. John Bull is evidently still doing business at the old stand.

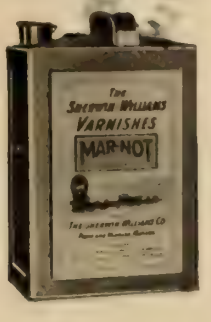
* * *

The Bank of Montreal has decided to raise its capital stock to $14,000,000. This is an increase of $2,000,000. It is a growing time with the Bank of Montreal as well as everything else in Canada except the bankruptcy list.

Governor Hill, of Maine, is strongly opposed to the Hay-Bond treaty. He says its ratification would result in serious injury to Maine's fishing interests. Thus do local interests continue to try and thwart what is obviously for the general good. And then only to think of it: The local interest is territory which Canada was euchred out of some 60 years ago.

* * *

Toronto is to have an all-Canadian exhibition, and it is to be hoped all Canada will take an interest in it.



Mar-Not

A DURABLE FLOOR VARNISH,

Has all the qualities that make fast friends of the painter and the householder.

Strongly advertised in a systematic advertising campaign, and of the highest quality, it is a splendid trade getter. It will satisfy you and your trade.

MAR-NOT is light in body, and light in color, and is absolutely unequalled as a perfect floor finish.

It is durable—does not mar or scratch easily.

Write for information regarding it.

THE SHERWIN-WILLIAMS CO.

PAINT AND VARNISH MAKERS.

CHICAGO, NEW YORK, CLEVELAND. NEWARK, MONTREAL, BOSTON, TORONTO, SAN FRANCISCO. KANSAS CITY.

PROMPT SHIPMENT FOR SPRING TRADE.

Boeckh's Toronto brushes and brooms and Cane's Newmarket woodenware are known throughout Canada both by dealer and consumer. Never before have united factories been in a better position to fill orders. Prompt shipment can be assured now for the Spring trade. When rush of trade comes on a little later this may be more difficulty. Wise dealers, therefore, should consider the question of placing orders early for these ready sellers.

Moosomin and Wapella, N.W.T., have been connected by telephone.

BRITISH COLUMBIA PROSPERING.

"THE last year," said Campbell Sweeney, manager of the Bank of Montreal, "has been a good one for Vancouver, and it seems to me that the next promises to be even better. The lumber and shingle industries are having a boom, and any one who knows of the years of depression in that trade will agree that they are benefiting from a prosperty that the lumbermen and millmen are entitled to. Jobbing houses are building up a fine trade, and prospects are very bright.

"For British Columbia generally, this last year has witnessed much genuine progress. In Nelson, which is the commercial headquarters of the upper country, bnsiness has been very good. Of course the depression in the lead industry has resulted in many of the mines remaining closed, but the mine-owners are taking action to induce the Government to legislate for their benefit. The commencement of zinc shipments has opened what is really a new industry, and if suitable freight rates can be secured, the buyers down in Kansas believe that a large business may be built up. In Boundary, the mining camps are humming, and the industry there has had a very profitable year. Around Rossland, mining is on a pay-roll basis, and while so many conflicting statements have been made that people hardly know what to believe regarding plans of the companies, the general prospects are good, and the mine managers seem to be confident. But all over the Province, people have reason to be well satisfied with the results of the year's business, and there is nothing to be discouraged about for the next."

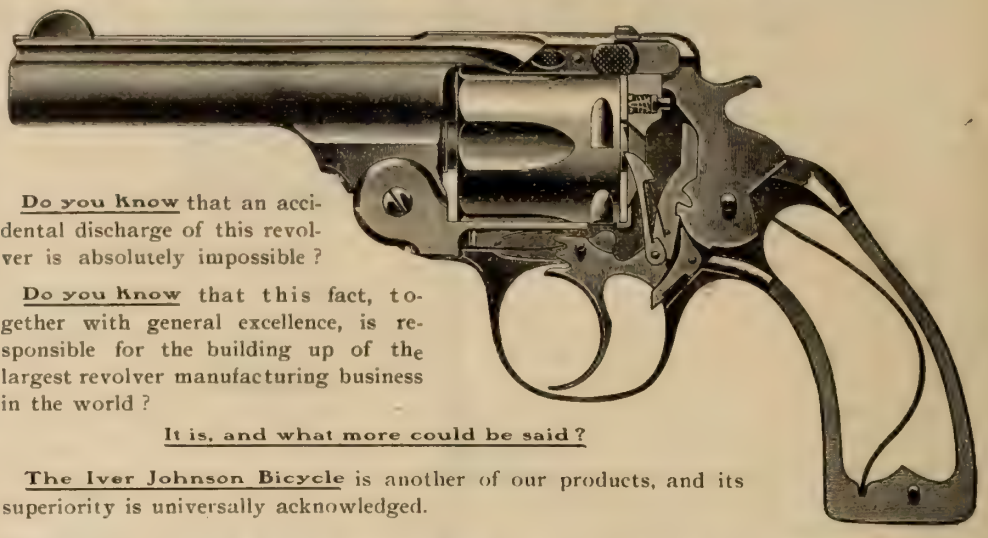
CAREER OF TORONTO'S NEW MAYOR.

Mayor Thomas Urquhart, of Toronto, is 44 years of age. He was born in Wallacetown, in Elgin county, and left school when he was 13 years of age. His first employment was in his father's general store, where he remained for 10 years. When he was 21 years of age he was appointed clerk of the Township of Dunwich, where he studied municipal law and became an authority upon drainage. This was his first taste of law. Two years later, after private study, he passed his matriculation examination. A few months later he came to Toronto, and became a junior in the firm of McCarthy & Osler. He was called to the bar in 1886, and entered the firm of Mills, Heighington & Urquhart. The firm later became Heighington, Urquhart & Boyd. In 1892 the firm became Urquhart & Urquhart, his partner being his brother, D. Urquhart.

WORTH KNOWING.

There is not a revolver made tha possesses safety features equal to those to be found in every Automatic

IVER JOHNSON REVOLVER.



Do you Know that an accidental discharge of this revolver is absolutely impossible?

Do you Know that this fact, together with general excellence, is responsible for the building up of the largest revolver manufacturing business in the world?

It is, and what more could be said?

CANADIAN GOODS FOR CANADIANS.

ALABASTINE.

ALABASTINE has been on the market for more than twenty years, and is known to be reliable. Is thoroughly advertised, and in demand. To sell anything else for coating walls, it must necessarily be on the recommendation that it is the same thing, *or just as good as Alabastine.*

MONEY MADE in an effort to sell goods for which there is no demand, and that have no special merit, is *paper money,* without the Government stamp. Real profit comes by selling what the people want and call for.

ALABASTINE is ready for use by the addition of cold water, made so by the inventor, Mr. M. B. Church, who was the first to produce a cold-water preparation that is thoroughly practical, that has superseded all hot-water mixtures and forced other manufacturers to *undertake* the use of the cold water process, which process is protected by *Canadian Letters Patent.*

ALABASTINE hardens with age, and repeated coats may be added from time to time without the necessity o removing old coats when desired to renew. This effects a great saving to the user.

ALABASTINE is made in Canada, by Canadian labor, and from rock taken from Canadian mines. The trade supplied by Wholesale Hardware and Paint Dealers. Also by

MACHINERY

DEVELOPMENT OF NIAGARA POWER.

By Harlan W. Brush, United States Consul at Niagara Falls, Ont.

THE most important development of the year in this consular district is the enlarged production of electric power at Niagara Falls. This has been in use at Niagara Falls, N.Y., for several years past, and the demand for this cheap and constant power has been so urgent that it has been impossible for the power company to keep pace with it. The original development of 50,000 horsepower at Niagara Falls, N.Y., was utilized some time ago, and the company have been working night and day to double the capacity of the plant, the tunnel providing for a discharge of water that would develop 100,000 horsepower. The second shaft has been completed, the machinery has been installed, and within a few months the full capacity of the Niagara Falls, N.Y., plant will be at the service of the Niagara frontier.

Realizing that the plant on the New York side of the cataract would only suffice for a short period, the power company commenced operations on the Canadian side of the river in August of last year. The work has been pushed rapidly, and it is expected that by next August 50,000 horsepower will be available. Already, the demand is so great that last week the power company let a contract for extending the wheel pit at once, so as to develop 110,000 horsepower instead of the 50,000 first contemplated. The two companies are practically identical as to stockholders, the Canadian company being officially designated as the Canadian Niagara Power Company.

A radical departure from the installation on the New York side of the river is the utilization of dynamos of 10,000 horse power each instead of the 5,000 units that were installed in the original power house. The 5,000-horsepower dynamos were such mammoth experiments that it was feared they would prove impracticable, but now they are to be succeeded by dynamos of twice their capacity. Quite a marked saving is effected in the construction of a 10,000 horsepower dynamo over two of 5,000 each.

The fact that cheap Niagara power is going to do all that was claimed for it in the way of attracting industrial concerns to the Niagara frontier is being so thoroughly demonstrated that a second company—The Ontario Power Company — has secured rights from the Ontario Government. The development of its plant commenced last April, and 50,000 horsepower will be the initial product, but this will be increased to 150,000 horsepower. Instead of being carried in an underground tunnel, the water is directed into flumes, carried to the brink of the Niagara gorge, and then dropped into the river through penstocks, which develop the power.

These two companies are backed almost exclusively by United States capital. A third company, which claims to be wholly Canadian, has applied to the Government for the privilege of developing 100,000 horsepower near the two plants now under construction. A full hearing of all the parties interested was given by the Government on Friday, December 19, at Toronto, and a decision will be announced shortly. As special stress is laid on the fact that a Canadian company should have preferential rights, it is believed that the petition will be granted. The Ontario Government exacts in all cases that 50 per cent. of the power developed must be provided to Canadian consumers if called for; the balance will be exported to the United States.

While millions of dollars are being expended in developing these various power plants, the revenue will be enormous. Comparatively little labor is required, once the energy of Niagara is under control When the 350,000 horsepower now in process of development is placed on the market, the gross income of the power companies will be in the neighborhood of 7,000,000 per year. This is figuring the price at $20 per horsepower a year, which is somewhat lower than the present average rate. As this provides constant power every day of the year, twenty-four hours every day, with thorough cleanliness, little fire or accident insurance, no expensive equipment for generating steam with its heavy annual wear and tear, no engineers or firemen—simply the turning of a lever—it is seen that for many lines of industry, Niagara electric power presents remarkable inducements

The industrial growth of the Niagara frontier in the past few years has been marvelous. It is prophesied that within 10 years 1,000,000 horsepower will be in course of development. Up to the present time the effect on the volume of water passing over the falls is not noticeable, even with the most careful measurements. A short time since, for the purpose of inspection, all the water was shut off from power development for a number of hours. Competent men were stationed at different points on the river and at the brink of the falls to measure the difference in the river level when the water producing 100,000 horsepower was cut off. The men were unanimous in their reports that they could not detect the slightest variation. A heavy wind blowing up or down Lake Erie will raise or lower the Niagara River several feet, but only those who are well acquainted with it will notice any special differerence in the discharge at the cataract. The main change is in the middle channel of the river and is principally shown in the rate of discharge, rather than the raising or lowering of the river.

THE BRANTFORD SCREW CO., LIMITED.

The Brantford Screw Co., Limited, Floyd Harris, president, and A. P. Goering, manager, have completed the equipment of their factory with the most up-to-date machinery that they could secure for the manufacture of stove, sink, carriage and tire bolts, wood and machine screws, rivets, rods, nuts, special bolts and wire. They are now asking the patronage of customers of their former company, The Chalcraft Screw Co., and of all who may be in the market for their lines.

TWO LARGE LIGHTSHIPS.

Two lightships building at Toronto by the Polson Iron Works for the Dominion Government are to be of the following dimensions: Length between perpendiculars, from the inside of stem to the inside of rudder post, 112 ft.; breadth, molded, 28 ft. 6 in.; depth of hold from top of keel to top of main deck amidships, 14 ft. 10½ in.; load draught, 11 ft. 6 in. There will be in each vessel one inverted surface-condensing single-cylinder engine with a stroke of 22 in. and cylinder diameter of 23 in., driving one right-handed four-bladed cast-iron propeller of the solid type of about 7 ft. 6 in. diameter. Steam will be furnished by two cylindrical straight-tubular boilers designed for a working pressure of 100 lb. per square inch, with a diameter of 9 ft. and a length of 16 ft. 7½ in.

MACHINERY AND ELECTRICAL NOTES.

W. J. O'LEARY & Co. have registered as manufacturers of electrical apparatus in Montreal.

The National Light, Heat & Power Co., Limited, Quebec, have been incorporated.

J. A. Crowstan, Markdale, Ont., has purchased a 10 h. p. horizontal boiler from H. W. Petrie, Toronto.

Machinery and electrical appliances are being installed in the Ottawa branch of John Labatt, Limited.

A No. 5 Jewel automatic engine was installed in the plant of Robertson Bros., Toronto, by H. W. Petrie.

A new electric power-house is to be built at Tweed, Ont., to take the place of one destroyed by fire last week.

Norman E. Bennett, of Orillia, Ont , has installed a 5 h. p. marine engine. This engine was furnished by H. W. Petrie, Toronto.

R. Hicks & Co., Peterborough, Ont., have purchased a sawing machine from Gould, Shapley & Muir, Brantford, and a motor from the Canadian General Electric Co., Peterborough and Toronto.

A boiler with a capacity of 1,300,000 lb. of water, and subject to a pressure of 60 lb. to the square inch has been supplied by the Fleming Foundry, St. John, N.B., to the Cushing pulp mill of the same city.

Walker Bros., Orillia, Ont., have purchased a 24 x 24 in. x 6½ ft. iron planer, also a 26 x 42 in. swing x 20 ft. bed gap lathe and some smaller lathes and emery stands from H. W. Petrie, Toronto.

The London Engine Supplies Company, manufacturers of engines and machinery generally, have been incorporated; capital, $40,000, divided into 400 shares of $100 each; provisional directors, F. G. Mitchell, Alfred M. Smart, and John Jones, all of London, Ont.

The Sheppard and Morse Lumber Company, of Boston and Ottawa, has closed the purchase of the old Mason sawmill, Bayswater, N.B., the price paid being $40,000 or thereabouts. The property is a large and well-equipped plant, together with a piling ground of considerable area.

The Hanbury Manufacturing Company, of Brandon, may shortly erect a lumber mill on the Pacific Coast in British Columbia. Machine manufacturers are now being communicated with and if the company can get the machinery within time, they will erect a mill near the mouth of the Fraser River.

The Montreal Transportation Company has placed an order for the construction at Newcastle-on-Tyne, England, of a steel freight steamer to trade on the lakes and take the place of the lost Bannockburn. The new steamer will be 248 feet long, 48 feet beam, with a depth of 23 feet flush decks, and is to be ready April 1. The engines will be placed aft, and will be triple expansion cylinders, 22, 35 and 58-inch diameter, with 39-inch stroke. Two Scotch boilers with a working pressure of 180 lb. to the square inch will be installed. Mr. J. A. Cuttle, manager of the company, is now in Great Britain, where he went for the purpose of arranging for vessels.

AMERICAN LOCOMOTIVES IN ENGLAND.

Marshal Halstead, United States consul at Birmingham, Eng., reviews the criticism of American locomotives in England, India and Australia. From the criticism he argues that a prejudice against German and American goods is responsible for what he suggests may be a deliberate and unfair crusade against them. His conclusion is particularly interesting. He says: "The crusade against our locomotives continues, and our builders disdain to protect themselves by publication. It seems to me that a British-made locomotive of the best type should be purchased and run as a test on some American railroad; and I hope an English engine driver, selected by the manufacturer of the engine, may be given charge of it, as a mere matter of fairness."

TO PREVENT COLLISIONS.

Experiments have been carried out on a railroad near Frankfort with a device to prevent collisions, with conspicuous success. The invention consists of a small apparatus fitted to the locomotive, which gives visible and audible signals if another locomotive is approaching on the same line of rails, or if a switch is misplaced, while in addition it also renders telephonic communication between locomotives possible. For the purpose of the experiments two locomotives were started for the same point on the same line of rails. When they were a certain distance apart, the apparatus on each locomotive gave signals to the engineers, who were then able to enter into communication.

INSTALLING ELECTRIC MOTORS.

A book which should be of much value to users of electrical power, has been issued by The Scientific Publishing Co., London, Eng.; F. J. A. Matthews, A.M.I.E.E., editor; under the above title. The book contains 157 pages and 84 illustrations, and while the field is covered in a comprehensive and practical manner, it is written in such language that it will be readily understood by the general public as well as by electrical engineers. The author first deals with the advantages of electric driving, and then explains the more common electrical definitions and functions in a simple manner. In the chapter on typical types of English motors will be found illustrations and descriptions of a number of different makes. The next sections on starting switches and other accessories is rightly given more space than that on the motors themselves; for while there is a great family likeness amongst the motors themselves, the controlling gear for the same is extremely varied in construction and action. The book closes with some concrete examples of the economies to be effected by the use of electric power, and remarks on the subject of attention and maintenance.

ELECTRIC POWER FOR VANCOUVER.

The construction of the Vancouver power works is steadily progressing. The waters of lakes Coquitlam and Beautiful are being joined by a tunnel two miles long, partly bored through solid granite. The dam is 300 ft. long, 50 ft. high, and 35 ft. at the base. The intention is to keep the water always 20 feet above the outlet pipe from the big dam. From the dam down to the power house is a drop of 400 feet in 1,600, so that no one need to be an expert hydrostatist to figure out that the water will not come down sluggishly.

SUPERIOR TO NICKEL.

Molybdenum has been found superior to nickel for hardening and toughening steel. It is even better than tungsten for that purpose. Nickel makes steel tough; tungsten makes it tough and hard; but tungsten steel is disposed to crack under impact. Molybdenum makes the steel both tough and hard and does not make it brittle. It has the additional quality of keeping the steel cool. It is therefore valuable in the manufacture of quick-firing guns. Molybdenum is one of the most refractory of metals. Nothing but the electric current will reduce it to a liquid state. The greater part of the ore supply has hitherto come from Sweden; but small quantities have been obtained from Maine and Arizona. Recently it was discovered in Ontario. A. T. Freed, formerly of the office of the American Iron & Steel Association, and now of Hamilton, Ontario, has some molybdenum property on the west shore of the Georgian Bay, north of Parry Sound. Neither of the Canadian properties has been developed. At present molybdenum ore, carrying 60 per cent. of the metal, is worth about $400 per ton, and the pure molybdenum about $2 a pound.—Iron and Machinery World.

HOW TO UNITE CAST IRON.

To unite ordinary cast iron is not an easy task, but it may be done, if one has luck, by boring a dozen holes in the parts to be united, then secure well and place about the break an abundance of filings of good pig iron, some wrought iron filings and also some of steel, says Mining and Scientific Press, Lute with fine clay and place in fire (before luting use any good flux, borax, etc.); heat until the filings melt and fill all the cavities. Let remain in the fire until fire goes out and the metal is cold; then remove and clean up.

For sale by Cutlery Jobbers all over the world

GEM CUTLERY CO., 31 Reade St., New York.

THE ART OF WINDOW DRESSING.

Some Hints and Suggestions.

I DON'T think you can dress your windows so as to catch trade without first sitting down quietly where you will suffer no interruptions, and asking yourself the question: "What particular article is it I wish to sell at this particular time and what particular design of window dressing must I use in which particular window that will

ATTRACT THE PARTICULAR CUSTOMER

to whom I wish to sell this article?"

There is the whole scheme of window-dressing in a nutshell—particularizing.

The most noticeable fault in the store windows is the lack of that specializing that catches the eye and by holding it turns the thoughts in the direction of one article so that the spectator can have it out with himself whether he could find any use for that article.

A POINT TO BE REMEMBERED.

There is a point to be remembered—an attractive specilaizing of an article for sale often brings about the result that the one who sees it thinks, "Have I any use for that?" whereas a mixed display where it attracts attention is viewed with the thought, "Have I any need for that?"

In the observation of the difference of those two thoughts lies the great success of many merchants of to-day.

In this day of demand for luxuries as well as necessities you must not cater only to what your customers might need, but to what they might use if they had it.

EXHIBIT AN ARTICLE

as if you would say: "Now, look here. Here's a beautiful or useful thing. Just think of the pleasure that could be derived from this, or the labor and time the possession of this would save you."

Don't appear to be saying merely, "Do you really need this article? Is it an absolute necessity to your daily existence?"

If you display what you have to sell in the proper way, the mind of the one who sees it is an

INTERESTING PSYCHOLOGICAL STUDY.

He is walking along the street, thinking, perhaps, of the good crop of wheat that field back of the barn raised last year, or the price of consols, or the last railway disaster, when suddenly his eye turns to a window, and he stops almost before he realizes it or knows the reason.

Then the study commences. His

THOUGHTS RUN

something like this: "Say there's a striking window. That article shows up pretty well, doesn't it? Quite a nice thing itself, too. That would be a great thing for some people. Say, it would save me lots of time and worry. I really believe I need such a thing as that. Yes, that is just what I do need. I'll get it."

Perhaps he thinks. "Ahem, quite a store A—— keeps. Good window that. That's a lovely thing there. Too bad Mary hasn't one of those. Wonder what it costs. Two dollars and a half! Ahem! That would be handy for her. I believe she'd want that. Come to think of it, don't see how she has done without it before. I'll get it."

You see we have become so accustomed in the past to buy only what we need that even yet with all the prosperity of the past few years we have to convince ourselves in most cases that we are actually in need of a thing before we buy it.

However, we are gradually

APPROACHING THE REALIZATION

of the fact that with ready money, comfort and even luxury provide a more pleasant and grateful (if I may use the word) opening for the spending of that money than the necessities of life.

It is a well-known fact that the luxuries we buy or receive are appreciated and recognized to a far greater extent than the supply of our needs.

We have reached that position in the consideration of beauty and comfort that upon seeing an article well displayed we comment first on its beauty or usefulness, although, as I have said, we yet try to observe our need of it.

If the goods for sale are purely a luxury you can easily see that your

SUCCESS IN THE HANDLING

of those goods depends entirely on your exhibition of it.

The majority of merchants recognize this fact and exercise some care in displaying such an article, but where the object for sale is not entirely a luxury, too many of you imagine that it has only to be shown in a desultory fashion. Then you wonder why it doesn't sell and afterwards steer clear of buying it again.

Observe this fact, that no matter what you have for sale, and no matter what window you are decorating, there should be one or two articles specilaized in the scheme of decoration.

SEASONABLE GOODS.

You have always some articles that you wish to push or that are seasonable. Therefore, you should have no difficulty in arranging a good window.

If the article is large the easier it is to give it prominence, but a small article can also be made prominent by leaving empty spaces around it or by having smaller goods radiate from it.

That scheme of making a ware conspicuous is the

EASIEST AND MOST EFFECTIVE.

No matter what size the article for sale it can be placed in the centre of the window, or even in any position. Objects are then placed in lines running towards the special ware you wish to push. The eye naturally follows those lines and as they all end at the particular article, it at last rests there and you have attained your object.

Strange as it may appear, this specializing, although focussing the eye in one spot, does not detract from the advertisement of the other goods in the window.

In the first place, they profit from the extra attention given to the window on account of such specializing, and the eye when drawn to a particular point naturally follows it up by roaming over the remainder of the display. Oftentimes, if the person viewing the window is observant, he will seek to discover the plan adopted to

ATTRACT HIS ATTENTION

to a point, and in doing so, of course, the other articles come under his consideration.

You never, however, decorate for the benefit of everything equally, so do not consider it a disadvantage even if, in the general scheme, prominence cannot be given to each article. They will have their turn sometime.

If you have been wondering why your window

LACKED TONE,

originality, influence, try specializing. Sit down, decide what you wish to push at this particular season, work out some plan for drawing attention to this article, then get to work and carry out that plan.

If the results do not surprise it is because you have selected some unseasonable article or the plan adopted for showing it is very defective. Don't stint yourself for time for considering article and plan, and the results will be apparent immediately.

CATALOGUES, BOOKLETS, ETC.

MECHANICS' TOOLS.

THE calendar of The Mechanics Supply Co., 96 Peter street, Quebec, is printed in English and French. On each of the 12 sheets, above the months, are photo-engravings of their various manufactures, which, being printed on much finer paper than is usually put into calendars, show up very well. The calendar is printed in red and black throughout, and all holidays are recorded. A glance at it will give some idea of the wide range of goods which the company handle. They have also an illustrated catalogue, which dealers will find useful. It is sent on application.

HARDWARE AND PLUMBING.

The 1903 calendar of Amiot, Lecours & Lariviere, hardware dealers and plumbers, St. Lawrence street, Montreal, has recently come to hand. It is a large one and well designed. Besides the advertisements, there are engravings showing the offices and sample rooms, and also the goods entrance end of the building. The sheets are printed in different colors. The calendar is in French.

CANADA FOUNDRY CO.

The Canada Foundry Co., Limited, are issuing a tasty calendar, the prevailing tint of which is blue. Pillars running up beside the date sheet support a picture of two brawny-armed workmen. In the background is the foundry and in white type, through the smoke from the high chimney, stands out prominently "Canada Foundry Co., Limited." A bright, green maple leaf, in the centre of which appears the company's monogram, adds materially to the appearance. The entire outline work of the calendar is made up of products of the foundry, and yet heavy and large as these products are, the result is not at all rough.

GREENING WIRE CO.'S CALENDAR.

The B. Greening Wire Co., Limited, Hamilton, are issuing this year a calendar similar in general outline to that sent out a year ago. An excellent feature of this year's publication is a series of tables of much value to dealers in, or users of, wire, sheet zinc, wrought iron and steel, bar iron, etc. The tables show the size, weight, length and strength of wire and wire rope, a table of transmission of power by wire ropes, weight and size of sheet zinc, weight of rolled sheets of wrought iron and steel, the weight of iron per foot. These tables are so arranged that they can readily be seen by lifting up the pages containing the calendar dates, which are of a large practical size.

TAYLOR-FORBES CO., LIMITED, GUELPH.

The Taylor-Forbes Co's. trade-calendar for the season of 1903 is an exceedingly fine one. The cover is printed in three colors. A young lady with one of their mowers, stands out well in the foreground, and a villa is in the background. On the second page is a clear cut of the Co's. plant, which plant covers 290,000 square feet of floor space. The cuts of their different styles of mowers are also creditable. The Taylor-Forbes Co., Limited, have a large trade with the Old Country, where their machines have a high reputation, as well as in the home market.

POETICAL HARDWARE DEALERS.

OFTEN the annual advertisement is the most effectual. The keen business man is, therefore, ever alert for a medium likely to prove of especial value. James & Reid, hardware dealers, Perth, evidently recognize a good opportunity for advertising, as this year, when a local paper was preparing its annual "Carrier Boys' Address," a poetic production, they secured the back page, on which the following verses were printed :

Messrs. George S. James and Daly Reid
Are known well all around,
As the proprietors of the Big Hardware House
Where little prices abound.

Their staff of clerks are courteous, polite,
Strict attention to orders is paid,
For served by Montgomery, Bolton and Haw
No customer is delayed.

Mr. Lawrence H. James is the practical man,
Who spares not an effort to please,
And his genius is such, that where others would fail,
He succeeds with the greatest of ease.

O'er the books in the office Miss Leonard presides,
And she fills this position of trust
To the firm's satisfaction, and customers' too,
She's so competent, careful and just.

The stock the firm carries is varied and large,
And perhaps something special you need,
Ten chances to one you can buy what you want
From the big hardware firm, James & Reid.

They handle nice harness and good curry combs,
Also blanket, belt, halter and bell,
Forks, shovels and spades, scythes, cradles and saws,
So the farmer can be suited here well.

The builder can buy all he requires
In nails, glass, locks, paint, or in tools,
The miner, his dynamite, steel or his chains,
For with James & Reid quality rules.

The most wonderful pump is the one with glass valves,
The pump children can handle with ease,
It's so easy to work and throws such a stream
And it has never been known to freeze.

But time and space fail us to tell of the stock,
But James & Reid would like this to say
That they thank you for patronage given to them
And hope for your custom alway.

VARNISH

"O Ruddier than the Cherry."

Wood Stains are an important branch of our business.

The **Canada Paint Company** manufacture Cherry, Rosewood, Mahogany, Walnut, Oak, Golden Oak and Green Amboine **Stain** for houses and furniture. They are incomparably the very best permanent stains made. A stained floor is sweet and wholesome.

We make a specialty of **Creosote Shingle Stains.** By their use the roof will be preserved and have a handsome appearance for a very long period.

Write for a set of samples. They will be sent free to any hardware merchant or architect. Address :

The CANADA PAINT COMPANY,
Montreal or Toronto.

JAPANS

PAINT, OIL AND BRUSH TRADES

DEVELOPING THE PAINT TRADE.

SOME months ago one of the leading hardware journals of the United States published a series of articles, extracts from letters from manufacturers and merchants in different sections of the States, in regard to the evident tendency on the part of the hardware trade to handle paints and oils. The letters indicated that the paint business of that country was formerly in the hands of the druggists, but, that, while a considerable proportion of the business is still handled by them, a steadily increasing share of it is now secured by the hardware trade.

In Canada, hardwaremen are recognized as the natural distributors of paints and oils, and, while in isolated cases general merchants, druggists, and even stationers handle them, the bulk of the business is done by the hardware trade.

Inasmuch as builders' hardware, tools, etc., are sold by hardware dealers, the latter find the sale of paints, oils and varnishes, particularly for building purposes, natural and easy. It is, moreover a profitable line to the dealer who gives time and thought to its development. One instance will suffice to establish this point. The following is an extract from a letter written by a dealer who handles the produce of one of the most progressive paint houses : " We cannot speak too highly of your goods, and take pleasure at all times in recommending and pushing them. In fact, we have thought of dropping out of general hardware and giving our entire time to pushing this line, but the smallness of the town, 8,000 population, makes us hesitate and we would be glad to have your opinion in the matter. Each succeeding year brings us larger trade in paints, and there is no line we handle that gives us the same pleasure in selling, and we consider it a valuable addition to our general business."

How best to develop the paint trade is a subject worthy of the hardwareman's best study, for the line is one that yields excellent returns for the time and thought spent in extending it. We would like to receive from hardware dealers throughout the country, who have made their paint-trade a particularly profitable line, their opinion as to how the trade should be developed, which we would be glad to publish. We do not want to know how any dealer got business that would otherwise have gone to a competitor, but how he developed entirely new business, which, in the long run, would help a competitor as well as the one who originated it.

PAINTMEN V SCOTCHMEN.

The paint men of Montreal had a curling match on Monday night with a team picked from the Scottish curlers, who are touring Canada. The Montrealers, although badly beaten, enjoyed the sport and clain if they had another opportunity they would do better. Mr. A. Ramsay was skip for the Montrealers and Mr. Prain for the Scotchmen.

ROBERT MUNRO RESIGNS.

At a meeting of the paint, oil and varnish men of Montreal on Monday a letter was read from Robt. Munro, stating his intention to resign as the representative on the Board of Trade Council, of which he has been an energetic member for three years. He was urged to keep his seat, but declined, owing to the pressure of other business. He was tendered a vote of thanks. Mr. John T. Wilson, of Wilson & Patterson, was nominated to occupy the seat vacated by Mr. Munro, and will, in all probability, be elected.

A BEAUTIFUL CALENDAR.

It would be hard to choose a more artistic painting for use in a calendar than that which The Wadsworth-Howland Company, paint and color makers, Chicago, are sending out to the trade. The feature of the calendar is an almost full-sized painting of a "Society Butterfly" in full array, presented in life-like colors, drawn by a first-class artist. It is safe to say that any of the trade fortunate enough to secure one will give it a place of honor either in their home or office. Do not write for one without mentioning " Hardware and Metal."

THE RALEIGH OIL DISCOVERIES.

A despatch from Chatham, Ont., clears up much of the confusion that has settled in the public mind for some time regarding the quantity of oil produced in the new Raleigh township oil fields. It seems that the production has been materially exaggerated. In one case a well which yielded 60 barrels the first hour now yields but 60 barrels per day, yet this well is still spoken of as yielding about 60 barrels per hour. There are a number of other wells in the district that are reported to be producing large quantities of oil, being credited with a yield varying from 10 to 30 barrels per day, based upon the production of the first hours, but which have a steady flow of one and a half, two, or perhaps four barrels per day only. Some of the wells which made a fairly good showing at first do not now produce enough oil to make it worth while operating them, and with the usual luck experienced by miners and drillers, other wells have proven themselves to be dry propositions. The general experience of this district shows that quite a large flow of gas is met with at about 330 ft., and directly beneath this is the oil stratum, with large quantities of salt water, the oil constituting probably in the neighborhood of 10 per cent. of the liquid pumped.

PAINT AND OIL NOTES.

The Federal Oil Company, of Montreal, are seeking incorporation.

The assets of The John McArthur Company, paint dealers, etc., Montreal, are to be sold on Monday.

A despatch from Chatham, Ont., says that discoveries of oils are still being made there, several new wells producing from 10 to 30 barrels per day. The oil is of high quality, its gravity being 34 degrees, which is two degrees higher than most Canadian oils. It will, therefore, make illuminating oil that cannot be excelled.

WITH THE FRANCIS-FROST CO., LIMITED.

James W. Lee, formerly with The Canada Paint Company, has accepted a situation with The Francis-Frost Company, Limited, Toronto, which company he will represent in Toronto and Northern Ontario. Mr. Lee is widely known as one of the most genial travellers on the road.

PAINT AND OIL MARKETS.

MONTREAL.

BUSINESS during the past week has shown a greatly increased activity, and the indications are that the volume of spring trade will be large. The bulk of the business being booked at present is for spring delivery, and the sorting-up orders are for fair amounts. Paris green is still in fair demand by jobbers and prices remain as hitherto quoted. Linseed oil on the English market is still too erratic to induce business, and local prices remain steady. The turpentine

That's the Paint I Want.

Dealers who have handled "Ark Brand" for years tell us that it practically sells itself.

The customer comes in to the store and points to a display of "Ark Brand" and says that's the paint I want.

He has used it before.

It satisfies him; he knows it is economical.

Isn't it well to have your paint customers satisfied?

Then sell them "Ark Brand."

Carry a line in stock so that you can serve customers with a paint about which you can tell the truth.

You can speak as highly as you like about "Ark Brand" Paint and the man who buys it will never prove you wrong. "Ark Brand" Paint is right.

market is still advancing and the prices have been marked up 2c this week. We quote

GROUND WHITE LEAD.—Best brands, Government standard, $4.90 to $5.15; No. 1, $4.67½ to $4.77½; No. 2, $4.30 to $4.40; No. 3, $3.92½ to $4.02½; No. 4, $3.55 to $4.65 all f.o.b., Montreal. Terms, 4 months, or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—$5 in casks, and in kegs, $5.25.

DRY WHITE ZINC.—Pure dry, in casks, 6¼c.; in 100-lb. kegs, 6¾c. No. 1 zinc, in casks, 5¼c.; in 100-lb. kegs, 5¾c.

WHITE ZINC (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No.2, 6c.

PUTTY.—We quote: Bulk, in bbls., $1.90 per 100 lb.; bulk, in less quantity, $2.05; bladders, in bbls., $2.25; bladders, in 100 or 200-lb. kegs or boxes, $2.40; in tins, $2.55 to $2.65; in less than 100-lb. lots, $3 f.o.b. Montreal, Ottawa, Toronto, Hamilton, London and Guelph. Maritime Provinces, 10c. higher, f.o.b. St. John and Halifax.

ORANGE MINERAL.—Casks, 7c.; 100 lb. kegs, 7¼c.; smaller quantities, 8¼c.

RED LEAD.—Genuine red lead, in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities, $5.75 per 100 lb. No. 1 red lead, casks, $4.25; kegs, $4.50, and smaller quantities, $5.50.

LITHARGE.—Ground, casks, 5c.; less quantities, 5½c.; flake litharge, casks, $5.25; smalls, $5.75 per 100 lb.

LINSEED OIL.—Raw, 1 to 4 barrels, 60c.; boiled, 63c.; raw, 5 to 9 barrels, 59c.; boiled, 62c. Terms, net cash in 30 days. Delivered in Ontario, between Montreal and Oshawa, at 2c. per gallon advance.

TURPENTINE.—Single barrels, 82c.; 2 to 4 barrels, 81c. Terms, net cash in 30 days.

SHELLAC VARNISH.—Pure white, $2.35 to $2.45; orange, $2.25 to $2.35.

MIXED PAINTS.—$1.20 to $1.40 per gallon.

CASTOR OIL.—8¾ to 9¼c. in wholesale lots, and ½c. additional for small lots.

SEAL OIL.—48 to 50c.

COD OIL.—35 to 37½c.

PARIS GREEN.—Canadian: Petroleum barrels, 13¼c. per lb.; arsenic kegs, 13½c.; 50 and 100 lb. drums, 14c.; 25 lb. drums, 14½c.; 1-lb. packages, 15c.; ½ lb. packages, 17c.; 1 lb. tins, 16c.; ½ lb. tins, 18c. English: Petroleum barrels, 14¼c.; arsenic kegs, 14½c.; 50 to 100 lb. drums, 15c.; 25 lb. drums, 15½c.; 1-lb. paper boxes, 16c.; 1-lb. tins, 17c.

TORONTO.

Turpentine has again advanced, the price now being 82c. delivered and 81c. at inside points. Linseed oil is 1c. per gallon lower. Gum shellac is quoted 2c. higher by some houses. Other lines are unchanged, though an advance in white lead is possible, either on account of an increase in the duty on lead products or because of the reformation of the White Lead Association. In any case, the jobbers state that prices are not being cut up as much as formerly. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5 to $5.25; No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½.; No. 4, $3.50 to $3.75 in packages of 25-lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. pkgs.; genuine dry white lead in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.50; ditto, in kegs of 100 lb., $5; No. 1, in casks of 560 lb., $3.75; ditto, in kegs of 100 lb., $4.25.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In 5-gallon lots, 60 to 75c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb.; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c. per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.25 to $2.35; white, $2.35 to $2.45 per gal.; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8½c. per lb.; cabinet glue, in bbls., 12c.; emery glue, in bbls., 17½c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.25; bladders, in 100-lb. kegs, $2.40; bulk in bbls., $1.90; bulk, less than bbls. and up to 100 lb., $2.05; bladders, bulk or tins, less than 100 lb., $2.90.

PARIS GREEN.—Petroleum bbls., 14c. per lb.; arsenic kegs, 14½c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. packages, 16c.; ½-lb. packages, 18c.; 1-lb. tins, 16c.; ½-lb. 18c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots and 8c in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1 10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 9 to 9½c. per lb. and 10 to 10½c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 bbls. and over of linseed oil sold only f.o.b. Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 82c.; 2 to 3 bbls., 81c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

GASOLINE AND BENZINE.—We quote as follows: Benzine, 19¼c. and gasoline, ordinary, 21¼c. and engine, 22¼c. f.o.b. Toronto.

WINDOW GLASS.

MONTREAL.

There is practically no business in window glass, and the prospects for an improvement in the near future are poor. Prices are very firm, however. We quote as follows: First break, 50 ft., $2; second, $2.10 for 50 ft.; first break, 100 feet, $3.80; second break, 4; third break, $4.50; fourth break, $4.75.

TORONTO.

Prices are unchanged, but there is some talk of the formation of another window-glass association, which information is having a salutary effect on trade. We quote as follows: Under 26-in., $4.25; 26 to 40 in., $4.65; 41 to 50 in., $5.10; 51 to 60 in., $5.35; 61 to 70 in., $5.75; 71 to 80 in., $6.25; 81 to 85 in., $7; 86 to 90 in., $7.75. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days. Discount, 15 per cent.

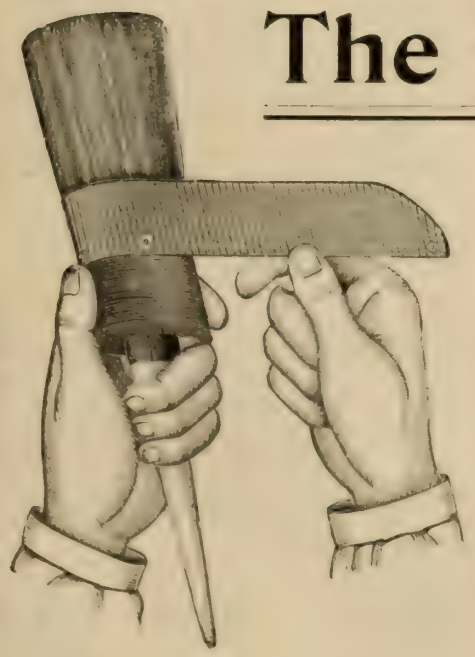
The Sort That Sells



A poor article is no bargain at any price. Doubtless the expert Painter realizes this truism about as much as anybody in the world: with him a poor, out-of-date Brush, upon which he has to spend time in winding by old-fashioned methods, means loss of money and inferior work to his detriment.

BOECKH'S FLEXIBLE BRIDLED PAINT BRUSHES

are the kind that are stocked by progressive Dealers, because they are demanded now by all progressive Painters.

—The bridle can easily be removed and replaced; it is not affected by —water, oil or paint; it works on a pivot and keeps the bristles elastic.

STOVES AND TINWARE

AND ALLIED TRADES

THE PROSPERITY OF EDMONTON.

W. C. JONES, treasurer of The J. F. Pease Furnace Co., Limited, Toronto, is in Edmonton, N.W.T., this week, superintending the installation of a heating plant in a large public building there. Mr. Jones seems to have caught the fire of enthusiasm over the Northwest, which is manifested by so many business men who visit that part of Canada. He writes as follows: "The Western country is very prosperous and promising. In Winnipeg business prospects are very bright indeed, and in every town we have passed through since reaching Fort William, there is every evidence of rapid and substantial progress. In Alberta the progress made within the last year has been amazing. It is astonishing that such a splendid country could have been so long unknown and neglected. The Bank of Commerce opened a fine office in Edmonton in October. The Merchants, Union, and Imperial were already here. Now the Bank of Montreal has within the last week paid $300 per ft. for a 54-ft. lot on which to erect a building for a new branch in the spring. It is backed up by an enormous trade centering here; by a magnificent farming and ranching country, and by a great trade in furs that reaches out to the Arctic Ocean, 2,000 miles north. The amount of merchandise handled here, the number of settlers coming in, the rapidity with which all the lands in Alberta are being taken up would astonish most people who have never been here."

THE McCLARY FIRE AT LONDON.

London, Ont., January 12, 1903.—On visiting the scene of Friday's conflagration, one can see a strong gang of men working like beavers cleaning up all the burned debris and making active preparations for resuming business and rebuilding.

Our London, Ont., representative called on the firm to-day and was authorized to insert in "Hardware and Metal," the following information:

"The accounts of the fire given by the daily press were greatly exaggerated. No damage was done to our heavy machinery; the greater part of this was on the ground floor, while the fire was mostly confined to the second and third floors, where some light machinery was in operation, and the balance of space was used for bench work. The fourth floor was used as a warehouse, in which a small quantity of made up stock was destroyed, but our large warehouses, japanning shop, spinning room, enamel shop, and foundry remain untouched. Our branch warehouses at St. John, N.B., Toronto, Montreal, Winnipeg, and Vancouver are all well filled with tin and enamel stock; with but slight exception, all our regular orders can be filled.

"Our heavy stamping machinery, which is in the damaged section, will recommence operations in a few days, and within two weeks our output will be as heavy as before the fire. Our tinsmiths all commenced work again this morning, and only a few girls will lose a few days' time.

"The tools destroyed were immediarely re-ordered, and many have already come to hand.

"The large store warehouse, which, owing to the very heavy demand for stores last year, was cleaned right out, will be utilized temporarily for the bench work formerly done in the building destroyed.

"Our customers will not suffer from inconvenience, as all the orders can soon be promptly filled as before, and we hope the cordial business relations will continue uninterrupted."

Insurance is carried by a number of companies. No correct estimate of the loss sustained can yet be arrived at, but the insurance men are busy on this matter now.

W. H. L.

CAN TRUST PRICES.

It is stated on seemingly good authority that The American Can Company has just announced prices for the coming season on the basis of $15.50 per 1,000 for No. 2 cans at Baltimore, and others at the usual differentials. The prices are about the same as last season, while the plate is 40c. a box lower in the open market. On the face of it, this would indicate considerably increased profits during the present year for the Trust. In line with this the general prospects of the company are said to be better than they have ever been, but this is not saying a great deal, as the combine on March 19 next will have been in existence two years, with 14 per cent. cumulative dividends still against the preferred stock.—N. Y. Journal of Commerce.

THE WESTERN FOUNDRY CO.

The Western Foundry Co., Limited, of Wingham, Ont., are hard at work on an extensive line of patterns which they state will embrace all lines that the Canadian trade demands and which, when completed, will be of the most modern and up-to-date design on the Canadian market. It would be well to examine the lines made by this company, which are rapidly winning an excellent reputation for the quality, finish and appearance of their product.

STOVE MAKERS MEET.

A meeting of the Stove Manufacturers' Association was held yesterday in the Royal Hotel. There were present Col. Gartshore, of The McClary Manufacturing Company, representing the Calorica Club, of Upper Canada; Charles Fawcett, of Sackville; Mr. Cosman, of The Amherst Furnace and Heating Company; James Hillis, of James Hillis & Son, of Halifax, and W. S. Fisher, of St. John. The principal topic of discussion was the affiliation of the Association with the Calorica Club, a similar organization in Upper Canada.—St. John Sun, January 9.

AMONG THE TRADE.

Power & Co., roofers, etc., Sydney, N. S., have been succeeded by Power & Cassett.

Samuel Wake, engineer at The William Kennedy & Sons' Co. foundry, Owen Sound, Ont., died last week after a brief illness.

Alfred Peters, manager of The Record Foundry and Machine Co., Moncton, N. B., was struck in the face on Saturday by a piece of iron that was being broken. His injury is a painful one.

John Illsey, tin and stove merchant, of Picton, Ont., died at his home on New Year's Day, after a brief illness. Mr. Illsey, besides being a respected business man, was one of the most earnest temperance and religious workers in Picton.

NINE-HOUR DAY IN VANCOUVER.

The iron moulders of Vancouver, B.C., and their employers have agreed to a nine-hour day instead of a ten-hour day with Saturday afternoons off—this change reducing the number of hours per week from 55 to 54. The minimum wage paid a journeyman moulder is $3.50 per day.

MANTELS, GRATES and TILE.

Are any of your customers building a new house? If so, why not try and sell them a mantel as well as hardware? They will want one, and it will pay you. Write us for catalogue and price.

INDUSTRIAL GOSSIP

THE Centrifugal Windmill and Manufacturing Co., Limited, Guelph, Ont., have been incorporated in Guelph, Ont., to manufacture windmills, combination anvils and hammock chairs. M. C. Burr, is president of the company and G. A. Black, secretary. If a suitable factory cannot be secured the company will buy a site and build a factory.

The James Innes Co. will erect a roller grist mill at Deloraine, Man., this summer.

The Grimsby Manufacturing Co. has resumed operations much earlier than usual this season.

The Ogilvie Flour Mills Co. are to erect a 1,500 barrel per day flour mill at Fort William, Ont.

Machinery for a grist mill has arrived at Whitemouth, Man., and the mill will probably be erected shortly.

Workmen employed in the moulding, annealing, core-making, woodworking and hame departments of the McKinnon Dash and Metal Works, St. Catharines, went on strike last Saturday.

The Bates Felt Co., Dundas, Ont., have been incorporated; capital, $40,000. Provisional directors, C. W. Bates, Dundas; Wm. B. Croy, C. E. Newberry and Wm. A. Stewart, of Hamilton.

The J. L. Nichols Company, Toronto, novelty manufacturers, have been incorporated; capital, $50,000; provisional directors, D. E. Hughes, Helen Hughes and A. M. Sinclair, all of Toronto.

Boston Manufacturing Company, Toronto, manufacturers of fancy goods, have been incorporated; capital, $40,000; provisional directors, Malcolm Cameron, R. S. Wilson and George H. Kilmer, all of Toronto.

Along the Canadian Government telegraph line into the Yukon the poles and wires will be substituted by an insulated cable, which will stand the rigors of a severe winter better than the poles and wires have done.

Ed. Merner, president of the Hamburg-American Wagon Co., of New Hamburg, Ont., who is in Winnipeg, has wired the company that he can easily sell the entire output there. The trade never looked so well.—Independent.

J. A. Hunter and J. J. Haslett, promoters of the Manitoba Cement Co., have secured the site for a large plant in Morden, Man. Besides a free site Morden offers them tax exemption, while considerable stock will be taken by citizens of the town.

Dr. Kendall, M.P., of Sydney, says that The Dominion Iron and Steel Co., Limited, is making regular shipments of coal to Sweden, and that the iron ore received in return, when mixed with ore from Bell Island, Nfld., makes an excellent quality of steel.

The formal announcement was made in last week's Ontario Gazette of the incorporation of The Marconi Wireless Telegraph Co., of Toronto, with a capital of $5,000,000. The provisional directors are: W. R. Green, New York; J. N. Greenshields, Montreal, and Walter Barwick, H. C. Osborne, and John Payne, of Toronto.

The New York Sun says that a railway line will be built through United States territory through the heart of Alaska from Dawson to Port Valdez, on the coast. The contract for building the line within three years has been given to J. B. McDonald, of New York, who, it is said, has organized a company that will send 5,000 men to work on the road as early in the year as possible.

W. J. Lindsay, of St. Thomas, Ont., promoter of the wire factory at Collingwood, Ont., says that as the by-law to bonus the factory has been passed, operations will shortly be proceeded with. The nail factory will turn out 25 tons of wire nails daily, and a plant capable of producing daily 25 tons of wire fencing will be installed. The floor space will cover an acre and half of ground. The company will get most of their wire rods from the Cramp Steel Company, and intend ultimately putting in a wire rod mill and getting their billets from the same concern. They will employ about three hundred hands when running a double turn daily.

The Quebec and Lake Huron Railway, which is proposed to run between tidewater at Quebec and French River, on Lake Huron, as direct as the engineers, T. E. Wing and M. E. Evans, can survey the line. Robert Campbell, vice-president of the Cape Breton Railway, who is interested in the project, says that the road will run hundreds of miles north of any existing lines and, in addition to covering the distance in less than 475 miles, will tap a finely wooded and arable country, and would be, in the heated summer months, a cool route for cereals. The company was incorporated last summer, and it is stated that if the engineers' reports are favorable, surveys will be commenced in the early spring. J. C. Cannon, of the Fourth National Bank of New York, and other American capitalists are identified with the enterprise.

SYDNEY THE STEEL CENTRE.

To-day will mark an important epoch in the history of Sydney, as the steamer Bergenhus, Capt. J. H. Svendsen, will steam out of the harbor, having on board the largest cargo of steel ever shipped in the world's history.

Five days ago the Bergenhus began loading, and this morning she will clear for Philadelphia with a full cargo of 5,252 tons of steel, which is the largest one shipment ever made. Sydney is yet only in its infancy as a shipping port, and from the fact that to-day's shipment leads the world, some idea may be formed of what it will be in the course of even one year, when the manufacturing of steel will be much larger than it is at present.—Sydney Post, Jan. 5.

COPPER PRODUCTION IN 1902.

Horace J. Stevens, assistant mineral commissioner of the State of Michigan, has compiled for The Boston News Bureau the following estimates of copper production for 1902, which the agency compares as follows with the figures for previous years (in lb.):

Lake Superior	166,000,000	156,289,481	145,461,408
Montana	218,000,000	229,870,415	270,738,489
Arizona	140,000,000	130,778 611	118,317,764
California	40,000,000	33,667,456	28,511,225
Utah	31,000,000	24,116,979	18,354,726
Miscellaneous	62,000,000	31,340,517	24,733,464
Totals	657,000,000	602,072,519	606,117,166

The percentage of increase in production over 1901 is 9.1 per cent., which compares with a decrease in 1901 from 1900 to 0.6 per cent. and an increase in 1900 over 1899 of 6.6 per cent. Mr. Stevens estimates the 1902 world's production of copper at 557,854 tons, an increase of 8.9 per cent., and comparing as follows (in tons);

1902	557,754	1899	468 423
1901	511,803	1898	434,023
1900	484,852	1897	405,350

Mexico is the largest contributor to the past year's increase. The supply of copper on hand at present in the United States is placed by Mr. Stevens at 150,000,000 lb., or 58,000 long tons.

How to Develop Canada's Export Trade.

The Views of Mr. C. E. Sontum, the Canadian Commercial Agent in Norway, on the Subject.

CANADA'S export trade is daily becoming a matter of more vital importance to the country. As the number of acres under cultivation increases, and our manufacturing facilities become larger the production must in time be greater than the domestic demand, and, unless we can find a ready market for the surplus of our home-grown and manufactured goods, disaster is sure to follow.

This is a question which has been agitating the minds of members of the Government, the Manufacturers' Association, Boards of Trade, etc., for some time past, and various arguments have been advanced pro and con.

Mr. C. E. Sontum, Commercial Agent for the Canadian Government at Christiana, Norway, a gentleman noted for his foresight and business ability, writing to the Minister of Trade and Commerce, Ottawa, on July 3, 1902, in an able letter discussing this subject, said :

I notice by the Canadian trade papers that a discussion is going on as to what the Government could possibly do in order to increase the Canadian export. A similar discussion has been going on here for some time, and has resulted in the Government establishing an information office, where the trade can get all kinds of information regarding the export. It is too early yet to express anything about how this office is fulfilling its place ; but it seems as if the trade expects it to do wonders at once, and some dissatisfaction has already been noted. Some people hold that the jealousy among the trade in the same lines will make it difficult to satisfy all. I, for my part, believe that one of the best ways of increasing trade is through trade papers. Throughout the whole world English is in a remarkable way becoming the commercial language, so it is understood by almost all of the educated classes, besides nearly all of the schools here teach English. Several trade papers in the Scandinavian countries are now being printed part in English and part in Scandinavian, i. e., The Fermand, which is the largest trade paper in Norway, and The Danish Export Review (Denmark) is printed exclusively in English. If, through a reduced postage, Canadian trade newspapers could be more extensively mailed to all of the exchanges in Europe, I believe this would be one of the best pushes the Canadian export could get

In order to learn more fully Mr. Sontum's views with regard to the value of trade papers in the extension of our export trade, Lieut.-Col. J. B. MacLean, President of The MacLean Publishing Co., on October 3 last, wrote him asking to be favored with particulars, at the same time directing him to the work of the Canadian Manufacturers' Association here.

The following interesting and comprehensive reply was received under date of October 28.

In possession of yours of October 3. I am obliged to you for your kind remarks in regard to my reports as Canadian commercial agent. I am also obliged to you for calling my attention to the Canadian Manufacturers' Association, and I might state, at the same time, that I have read with considerable interest in your valuable paper the debates there have been in regard to the promotion of Canadian trade, and this is of so much more interest to me, as, during the last few years, the question has been very actual also in this country, and much agitation has been going on among our manufacturers and export-houses. The demand for official assistance and pressure on the Storthing (Parliament) finally resulted in the establishing of an information bureau where the trade can get every information in connection with the export

In my opinion, what a Government can especially do for its manufacturers and exporters is to facilitate communications and, if possible, use its influence to obtain the lowest freight rates both on land and sea, besides reducing the postage on all magazines and trade papers, as well as circulars, to a minimum.

To send speakers to Europe holding lectures about Canadian products, as I noticed a member of the Canadian Manufacturers' Association suggested, would, in my opinion, not result in much. On the other hand, a trade paper which is received by an importer will always interest him if he is a live man, as it will teach him something. He will there get news and ideas, both suggested editorially and from the advertisements, and the paper will lay on his desk awaiting him to pick it up when he has a moment to spare.

Now, right here, I will say something about advertising which I believe will interest you. It is very common, of course, that the papers advise people to advertise, and statements and figures are given about such and such well-known houses, who are known to do a great deal of business, that they spend so much for advertising, etc., during the year. It is, without doubt, true it pays to advertise, but I believe it often looks to merchants and exporters like the paper is keeping on hammering at this in their own interest about the same as a commercial traveller talking for his goods, which to a certain extent it does ; but, nevertheless, it is a nailed-down fact that advertising pays.

A United States manufacturer would hardly think of getting business in Europe by advertising in Canada. I can, from actual experience, tell you such things happen, and I believe very often. Here is an example, which happened me : I noticed some years ago in THE CANADIAN GROCER time and time again a small advertisement for "Tanglefoot" sticky fly-paper, something I had then never heard of before. Finally, one day I said to myself, if that firm can keep on advertising that article there must be something in it, and if a United States firm can sell it in Canada we might be able to sell it in the Scandinavian countries. We wrote them asking for samples and quotations, offered it to the trade, it took, and proved to be a good article. We now buy it every year and have done so for seven years, not by the box or by hundred boxes, but by the carload, and when we have a warm summer it seems as if we cannot get enough of it. Even up to this moment The O. & W. Thum Co., manufacturers of the fly-paper, have no idea that they got their Scandinavian trade through advertising in a Canadian trade paper, as I will confess I forgot to mention your paper when I first wrote to them.

There are other firms from whom I have bought considerable goods through the advertisements in your Canadian trade papers. I can mention, for instance, The Tillson Company When Canada is on the right side of the market, so they can compete against the United States exporters, I have no difficulty in placing orders for carloads with this firm, as the goods we have had from them have been of the very best quality—second to none.

I had also recently a shipment of corn flour from St. Lawrence Starch Co. From this firm I buy regularly what I can sell of their goods and have never had any complaints In fact I must say this is to the praise of Canadian exporters that with the exception of apples, I have never had any trouble with Canadian goods, and the merchants here are getting to look with increasing confidence on goods of Canadian manufacture. You have in Canada some firms who have in their different lines been the standard-bearers, so to speak, for Canadian trade all over the world. I will only mention a few such firms, for instance, Messrs. Hiram Walker & Sons distillers of "Canadian Club" whisky ; The Dominion Radiator Co., Limited manufacturers of "Safford" radiators, Ogilvies and Lake of the Woods Flour Mills and Massey Harris etc. Walkers' "Canadian Club" whisky can be had in all the best restaurants in every corner of Europe I think that Walkers have done for the Canadian liquor trade what a couple of Havana manufacturers of cigars have done for the tobacco trade of Cuba, because of the excellent quality of their goods. For Havana cigars, regardless of who the manufacturers are, have got a reputation all over the world although not all of the cigars from Havana are particularly better than the best of other cigars. The same way I think it is happening with Walkers "Canadian Club" whisky. Canadian whiskies in general are getting the reputation of being the best whiskies made in America because people get to know "Canadian Club." The merchants of Canada of course know this firm so well that it would be unnecessary to mention the style this firm does everything in. Their bottles, labels, capsules, show cards in fact everything in connection with Walkers of Walkerville give the foreigner to understand that this firm belongs to the very first and is conducted with great ability. I have nothing to do with the sale of "Canadian Club," but I have often heard remarks about it

A Canadian article I have been working very much with is radiators from The Dominion Radiator Co., of Toronto, whose advertisements are in your Hardware and Metal Their radiators are here considered the very best, as their "Safford" patent prevents the possibility of any leak. My firm has furnished these radiators to a number of both official and private buildings during the last six years. Of Government buildings which are heated with Dominion radiators, I will only mention the Insane Asylum of Christiana, the Government Hospital at Christiana, the Government Agricultural Schools, the Technical Schools at Drontheim, the Stavanger Prison at Stavanger, the Reserve Prison at Christiana, the Government Manufactory of Arms at Kongsberg, the Artillery Barracks at Christiana and many others. We have also sold their radiators in Sweden, Finland and Denmark.

Lately there has, as you know, been very hard times in Northern Europe, and everything is about at a standstill. Now, let me say something which, if I am right, might be of use to some of your readers, and which, I being at a distance, maybe have a better chance to notice that they have. Of late years, on account of the very good times in the United States, their manufacturers have had a good and steadily increasing business, as the home consumption has been large, and on account of the large dividends there have been started an enormous lot of new factories. The overproduction is now commencing. We receive almost by every mail more and more offers for different kinds of goods at lower prices than before. This is bad, and I believe that inside of two years there will be an enormous crash in the United States and goods will be offered at almost anything. How this will affect Canada you know yourself.

No doubt there ought to be some carefulness in starting new factories just now. In fact, if I was in America to-day, I would sell what I had of stocks of every kind, as I believe the top prices have now been reached. I would, instead, invest in land in the Canadian West. Now, this is my individual opinion, and I believe I am right. What may delay the knock a little is the excellent harvest they have had in the United States, but it is sure to come. When I, eight or nine years ago, was in Canada and the United States as Norwegian Commercial Commissioner in the interest of Norwegian export, the times here were flourishing and the merchants were over-estimating everything, as people are liable to do in good times. Old factories were enlarged and new ones built and everything increased so rapidly, but when the crash came a few years later, one institution after the other was closed and wound up, including half a dozen banks.

Now the just are suffering with the unjust, and I am afraid the same might happen in Canada if there came a crash in the United States as the American manufacturers would have to offer their goods at less than cost price.

Yours, respectfully,

C. E. SONTUM.

These remarks, coming as they do from a gentleman holding as important a position in foreign trade as Mr. Sontum does, cannot but have their effect upon Canadian business men who are interested in export.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, January 16, 1903.

HARDWARE.

BUSINESS in the wholesale hardware trade is steady and quite a number of orders for spring delivery have been received during the past week. There is nothing very startling to report as regards prices, as the market in nearly all lines of shelf goods is steady. An advance of 10 to 15 per cent. has occurred in pumps. The cheaper grade of axes have advanced $1 per dozen and the better ones, 50c. per dozen. Tinsmiths' tools have also advanced from 5 to 15 per cent. The market for skates for the season just closed was not up to former years, although dealers are perfectly satisfied with the trade done. Hockey sticks have had a big sale and there are still quite a few going out through the jobbers.

LAWN MOWERS.—It is a little early for lawn mowers, but a few orders have been taken during the past week. Prices are as follows: 10½-in. wheel by 12-in cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—Very little business is doing. We quote: $2.90 per 100 lb. f.o.b. Montreal; $2.55 f.o.b., Cleveland, in carlots of 15 tons; $2.67½ f.o.b., Cleveland, in smaller lots.

GALVANIZED WIRE.—The movement is slow and prices remain unchanged. Quotations are as follows: No. 5, $3.70; Nos. 6, 7 and 8, $3.15; No. 9, $2.65; No. 10, $3.20; No. 11, $3.25; No. 12, $2.80; No. 13, $2.90; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—There are a few orders being received, but the market is quiet and prices are unchanged. We quote: Bright and annealed, $2.50 per 100 lb. f. o. b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE WIRE.—Orders are very scarce on this market. Discount is still 25 per cent. with the following extras: 1 and 2-lb. hanks, 25c. per 100 lb.; ½-lb. hanks, 37½c. and ¼-lb. hanks, 50c.

BRASS AND COPPER WIRE.—The market for both these wires is very slow. They are discounted at 62½ per cent.

FENCE STAPLES.—The business that has transpired on the local market has been a few orders for jobbers, and was done on a basis of $3 per 100-lb. keg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

WIRE NAILS.—Trade is quiet and the prices remain unchanged. We quote as follows: Carlots, $2.40 and small lots at $2.45 per keg f.o.b. Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

CUT NAILS.—An improvement is to be noted, but as yet the market is quiet. In carlots, the price is $2.40 per keg and in small lots, $2.45 per keg.

HORSE NAILS.—Everything is very quiet in this market, but the prices are firm at last week's quotations. Discounts

FIRE ON FRIDAY, JAN. 9.

Contracts for rebuilding made Jan. 12.

Output will be normal by Jan. 26 or 30.

Principal warehouses (filled to the garrets) were not touched by the flames.

Tinsmiths started to work Monday morning.

Our large spacious **warehouses** at **London, Toronto, Montreal, Winnipeg, Vancouver** and **St. John, N.B.** are all well filled with goods, and though our loss is heavy it will not affect our regular course of business.

All orders will be filled in our usual prompt manner.

are: "C" brand, 40, 10 and 7½ per cent. off; on "M" brand, "Oval," 57½ per cent.; "New City," 57½ per cent; "New Countersunk," 65 per cent; "Monarch," 65 per cent.; "Peerless," 50 and 7½ per cent.

HORSESHOES.—There is a steady demand and prices are quite firm. Prices follow: Iron shoes, light and medium pattern, No. 2 and larger, $3.35; No. 1 and smaller, $3.60; snow pattern, No. 2 and larger, $3.60; No. 1 and smaller, $3.85; X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.45; No. 1 and smaller, $3.70; feather weight, all sizes, 0 to 4, $5; toe weight, all sizes, 1 to 4, $6.25. Shoes, more than one size in a keg, 10c. per keg extra. F.o.b. Montreal only.

RIVETS AND BURRS.—Dealers report a few orders, but say the market is quiet. Quotations are as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—There is no change to note in bolts and nuts this week, and the discounts are quoted as follows: Norway carriage bolts, 55 per cent.; common, 50 per cent; full square carriage bolts, 55 per cent.; machine bolts, 50 and 5 per cent.; coach screws, 66 2-3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50 and 5 per cent. To any retailer an extra discount of 10 per cent. is allowed. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3½c. per lb. off list; hexagon nuts, 3⅝c. per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—There is no visible improvement in screws, and discounts are unchanged. Our quotations are as follows: Round head bright, 82½ and 10 per cent.; flat head bright, 87½ and 10 per cent.; brass, round heads, 75 and 10 per cent.; brass, flat heads, 80 and 10 per cent.

CORDAGE.—The market is very quiet and prices are unchanged. We quote: Pure manila, 14c.; British pure manila, 12c.; sisal, 11c.; double lathyarn, 11c.; single lathyarn, 10½c.

BUILDING PAPER.—The movement in building paper is light and prices are the same as last quoted. Our quotations are as follows: Tarred felt, $1.75 per 100 lb.; 2 ply, ready-roofing, 90c. per roll; 3 ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 50c. per roll; tarred fibre, 60c. per roll, O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN WIRE CLOTH.—The market is practically at a standstill. The price quoted is $1.40 per 100 square ft.

FIREBRICKS.—Trade is quiet, and the prices are as follows: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—There is a small amount of business being transacted at last week's quotations. We quote as follows: Canadian cement, $1.90 to $2.25; German, $2.20 to $2.30; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel ex store, and American, $2.10 to $2.20 ex cars.

OPEN HEARTH STEEL

SNOW SHOVELS.—A fair business is being done by jobbers, and our prices are as follows: "Hauptant," $2.25 to $2.40; "Victor," 40 per cent. off; steel railroad shovels, 48 and 5 per cent. off.

FIRE SHOVELS.—There is a moderate trade doing. The discounts are unchanged. Our quotations follow: No. 70, 38½ to 40c. per dozen; No. 55, 55 to 60c.; No. 57, $2½ to 90c.; No. 60, $2½ to 90c.; No. 65, $1.37½ to $1.45; No. 80, 50 to 55c.; "Duplex," No. 7, $1.21; No. 9, $1.52; No. 11, $1.82.

SKATES.—The business for this season is all over as far as the wholesale trade are concerned. We quote: Halifax pattern, 36c. per pair; nickel-plated, 65c. per pair; ladies' nickel-plated, 60c.; per pair; ladies' concave nickel-plated, $1.35; plain hockey, 27c. to $1.35; nickel-plated hockey, 60c. to $2.50; double-end hockey, $1.50 to $3. Skate straps, 35c. to $1.35.

HOCKEY STICKS.—There is still a small movement in this line and the prices are unchanged. Quotations are as follows: Best second growth, goal keepers', $1.20 per doz.; ash, $2.90; elm, $2.25, boys' elm, $1.10; common, 90c. Regulation pucks, $1.50 per doz.

COAL HODS.—Very few coal hods have been sold during the past week. Prices follow: Japanned, 16 in., $4.50 per doz.; 17 in., $4.80; 18 in., $5.10; with gold band, 17-in., $5.10; 18 in., $5.40. Galvanized, 16 in., $6.20; 17 in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

LANTERNS.—There is a fair trade doing in lanterns at unchanged prices. We quote as follows: Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7 per doz.; dash-board, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

METALS.

The market for metals has been very steady during the past week with no striking feature. Ingot copper is firm, a slight advance having taken place, and indications point to another within the next few days. Ingot tin has also advanced and is still going up, and it is not at all improbable that it will go 2 or 3c. higher. There is nothing of importance to report from the foreign markets.

BAR IRON.—There is a fair trade doing and the prices are steady. Prices follow: Merchants' bar, $2; horseshoe iron, $2.25; forged iron, $2.20.

BLACK SHEETS.—A fair movement is reported and quotations are unchanged. We quote: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 24 gauge, $2.50; 8 to 20 gauge, $2.50.

GALVANIZED IRON.—The prices are about the same as last week, and business is reported quiet. Our prices are as follows: No. 28, Queen's Head, $4.40; Apollo, 10½ oz., $4.30; Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand $4.05. For less than case lots 25c. extra is charged.

LEAD PIPE.—A fair business is doing. Composition and waste are quoted at 8c. and ordinary at 7c. The discount is 27½ per cent.

IRON PIPE.—There is no change in the market from a week ago. Prices are as follows: Standard pipe, per 100 feet, in lengths under 19 feet: Black, ¼, $2.10; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1-in.,

OUR CATALOGUE

An Encyclopaedia For Builders.

In it you will find full information about all the popular Sheet Metal Building Materials used so universally and by up-to-date workers.

If you're not posted, read up our catalogue—it's full of practical information.

You can't cater to the best and biggest building trade without our lines.

When ordering from us you're certain of highest quality, for that's our specialty.

Metallic Roofing Co., Limited

TORONTO. MONTREAL. WINNIPEG.

$5.20; 1¼, $7.35; 1½, $8.95; 2 in., $12.55. Galvanized, ¼, 33.29; ⅜, $3.45; ½, $3.85; ¾, $5; 1 in., $7.20; 1¼, $10.05; 1½, $12.20; 2 inch, $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, ½, $4.20; ¾, $5.25; 1 in., $7.55; 1¼, $10.55; 1½, $12.75; 2 in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1 in., $9.5; 1¼, $13.25; 1½, $16; 2 in., $21.90. For threads and couplings 5 per cent. is added.

TINPLATES. The local and foreign markets are both quiet. We quote as follows: Cokes, $4.25 and charcoals, $4.75 to $5.25.

SOIL PIPE AND FITTINGS. The market for these lines is quiet and prices are unchanged. The discounts follow: Light soil pipe, 3 to 6 inch, 50 per cent., medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8 inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.; extra heavy fittings, 8-inch, 45 per cent.

PIG IRON. There is nothing of importance doing. We quote $23.50 to $24.50 ex store, Montreal.

INGOT COPPER. The copper market is very firm and an advance is looked for. We quote $13.50 to $14.50 per 100 lb.

INGOT TIN.—There has been an advance in ingot tin, and we now quote $30 to $32 per 100 lb.

PIG LEAD. The market is quiet and prices steady. In carlots the price is $2.90 and in small lots, $3.25.

STEEL.—Business is quiet and few orders are being booked this week. Prices are unchanged. Quotations are as follows: Sleighshoe, $2.10 to $2.20; tire, $2.20 to $2.25; bar, $2.05; spring, $2.85 to $3; reeled machinery, $2.75; toecalk, $2.60 to $2.90; machinery (iron finish), $2.10; mild steel, $2.05; square harrow, $2.15.

TOOL STEEL. There is nothing to report in this line, but the market prices are very firm. We quote as follows: Black Diamond, 8c.; Sanderson's, 8 to 12c., according to the grade; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 65c. per lb.

CANADA PLATES.—Galvanized plates are moving freely and the market price is steady. Our quotations are as follows: 52s, $2.70 to $2.80; 60s, $2.85 to $2.90; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized 70s, $4.45 to $4.55.

TERNE PLATES. We quote $7.50.

COIL CHAIN. The market for coil chain is firm and the demand continues to be brisk. Our quotations are as follows: No. 6, 10c.; No. 5, 9c.; No. 4, 8½c.; No. 3, 7c.; ¼ in., 6½c. per lb.; 5-16, $5; 5-16 exact, $5.25; ⅜, $4.30; 7-16, $4.10; ½, $4; 9-16, $3.80; ⅝, $3.70; ¾, $3.60; ⅞, $3.55; 1 in., $3.50. In carload lots an allowance of 10c. is made.

SHEET ZINC.—There are no sales being made. We quote $5.50 to $5.75.

ANTIMONY. This metal is quiet. We quote 10c.

ZINC SPELTER. There are no orders being received at present. We quote $5.25

SOLDER.—A fairly good trade is doing in solder. We quote: Bar solder, 20c. and wire solder, 18c.

SCRAP METALS.

The scrap metal market is active at present and the prices are firm. All the principal dealers have a large stock on hand, but do not think it will last long, as they expect to be very busy shipping for the next week or so. Our quotations are still as follows: Heavy copper and wire, 9c. per lb.; light copper, 8c., heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $15 to $16; No. 2, $7 per ton; machinery scrap, $16.50 to $17; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6½ to 6¾c. per pound.

RAW FURS.

The market shows no new feature of importance. Next week, commencing on the 19th inst. the London fur sales take place, and prices will be announced for the following three months. We quote:

HIDES.

There is no change in hides and business continues to be brisk. Our prices follow: No. 1 hides, 7½c.; No. 2, 6½c.; No. 3, 5½c.; calf skins, 8 to 10c., and lambskins, 65c.

MONTREAL NOTES.

Ingot copper is very firm and an advance is looked for.

Ingot tin has advanced this week and we are now quoting it at $30 to $32. It is thought that it will go still higher.

Lennis & Finkelstein, general merchants, Stonewall, Man., have dissolved partnership; Henry Lennis continues.

THE MARKETS

ONTARIO MARKETS.

HARDWARE.

Toronto, January 16, 1903.

ORDERS from travellers are now coming in more freely. In every respect the season is starting off in better shape than last year. The business reported, both from travellers' orders and by letter, is of a sorting nature, and aggregates in a large volume of trade for this time of year. Prices are steady, almost featureless.

BARB WIRE.—A few inquiries, but not many orders are reported. Base price is as follows: $2.67½ from Cleveland, and 12½c. less in carlots. From stock, Toronto, $3.

GALVANIZED WIRE.—The market is featureless. Prices are unchanged. Our quotations are as follows: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.65 to $2.85; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.80 to $3; No. 13, $2.90 to $3.10; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE.—There is not much movement, but some inquiries are being received. We quote the base price as follows: $2.50 per 100 lb. Oiling, 10c.; coppering, 60c. and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—Orders are coming in nicely. Prices are unaltered. We quote as follows: $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS.—There is nothing doing. We quote $2.50 per keg.

HORSE NAILS.—There is not much doing this week. Prices are unchanged. Discounts are as follows: "C" brand, oval head, 10 and 10 and 7½ per cent.; on "M" brand, 50, 10 and 5 per cent.; on "Monarch," 65 per cent., and "Countersunk" head, 65 per cent.; "Peerless," 50 and 7½ per cent.

HORSESHOES.—Market is quiet and prices are unchanged. Quotations are as follows: Iron shoes, No. 2 and larger, light medium and heavy, $3.45; snow shoes, $3.70; light steel shoes, $3.55; feather weight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—A fair sorting trade continues at steady prices. We quote as follows: Flat head bright, 87½ and 10 per cent. discount; round head bright, 82½ and 10 per cent.; flat head brass, 80 and 10 per cent.; round head brass, 75 and 10 per cent.; round head bronze, 65 per cent. and flat head bronze, 70 per cent.

RIVETS AND BURRS.—The demand is improving. Boiler rivets are in particularly good request on account of the activity at large boiler works. Quotations are as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—Business has picked up with a rush, machine shops now being unusually busy. Prices follow: Carriage bolts, common ($1 list), 50 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron ($3.00 list), 55 and 10 per cent.; machine bolts, all sizes, 50 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—Prices are unchanged. The discount is now 45 per cent., and the list price has been reduced $3 per doz. for Olds' goods, $2 for Gray's and $1 for Burns'.

ROPE.—The reduction in sisal has not increased the demand, which continues of a hand to mouth nature. We quote as follows: Pure manila, 14c.; British manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3-cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—Trade is well booked up. No change in the discounts is noted, they continuing at 60 and 10 per cent.

LAWN MOWERS.—In this line, too, orders for spring delivery are well in. The prices follow: Woodyatt, 12-in. wheels, $7.50; Star, 12-inch wheels, $5.50; Daisy, 12-inch wheels, $4.90; Philadelphia, 10-inch wheels, $6; Ontario, 10-inch wheels, $12.75. The other prices are in proportion.

CUTLERY.—A good business continues, with prices firm.

BUILDING PAPER.—A fair trade is doing at unchanged prices. We quote: Dry sheathing, grey or straw, 35c. per roll; tar sheathing, grey or straw, 45c. per roll; dry fibre, 50c. per roll; tarred fibre, 60c. per roll.

TINWARE AND ENAMELLED WARE.—A good movement continues in milk-can trimmings, but the general trade is moderate.

STOVES AND RANGES.—There is not much doing, but the indications point to an early jobbing season in summer lines.

RANGE BOILERS.—The demand continues heavy. Prices are firm. We quote: 18 and 30 gallon, $6; 35 gallon, $7; 40 gallon, $8; 52 gallon, $12.50; 63 gallon, $19; 82 gallon, $23; 100 gallon, $31, and 120 gallon, $37.

SCREEN DOORS.—The demand is good for spring delivery. We quote as follows: Screen doors, common, 2 or 3 panel, walnut stained, 3-in. style, $6.60; stained, yellow or green, $6.80; in natural colors, oil finish, $8.15; 4 in. style, 20c. per doz. extra.

CEMENT.—There is not much doing as yet. The prices are nominal. Our quotations are as follows: Canadian Portland, $2.80 to $3.20; hydraulic, $1.35 per barrel. At the works the prices are $2.50 to $2.70 per barrel.

PLUMBERS' BRASS GOODS.—The demand keeps excellent, particularly from the Northwest, and as copper, zinc and lead continue firm, prices are steady.

METALS.

Stock-taking having been the order of the day for some time the demand for stock shipment is light. Import business for prompt and forward delivery is of very satisfactory volume. Price conditions are featureless. We quote:

PIG IRON.—The market continues stiff, the demand continuing to be in excess of the supply. Some Scotch and English iron has been quoted here at figures varying from $21.00 to $23.50 per ton, though some No. 1 English is being sold at $24, when it can be had. Prices are as follows: $23 to $25 for No. 1 and $22.50 for No. 2 at the Canadian furnaces. No. 2 Summerlee is quoted at $25 on track, Toronto.

STEEL BOILER PLATES.—We quote $2 per 100 lb. at Pittsburg.

TOOL STEEL.—There is a good demand at steady prices. Quotations are: "B C" and "Black Diamond," 10 to 11c.; Jessop's, 'Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8c. to 9c.; Park's "Silver," 12 to 14c.; Park's Special," 15 to 20c.

MILD STEEL.—The prices are steady. We quote $1.90 per 100 lb. at Pittsburg and $2.75 per 100 lb. on track, Toronto.

SPRING STEEL.—The demand is normal, but the mills are still behind their orders. We quote $3.50 per 100 lb. on track, Toronto.

BAR IRON.—Prices are firm as the market keeps active. We quote the base price: $2.05. Extras cut to length while rolling: 2 ft. and over, 10c. per 100 lb., 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft. by special agreement, according to length and size.

BLACK SHEETS.—The demand is quiet and prices are unchanged. We quote as follows: Common, $3.15 for 28 gauge and dead flat, $2.50 for 26 gauge.

CANADA PLATES.—Some movement in small lots is reported. Quotations are: All dull, $2.90 to $3; half-polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—A fair business is doing at steady prices. We quote: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—The demand is active. Prices are firm at $29 to $30 per 100 lb.

TINPLATES.—The demand for spot shipment is improving and prices are firmer. We quote as follows: Charcoals, $4.75 to $5 and cokes, $4.25 to $4.50 per box.

COPPER.—The demand is normal, last week's demand being maintained. Prices follow: Ingot copper, $13 and sheet copper, $22 to $23 per 100 lb.

BRASS.—This is in fair demand. The discount is 15 per cent.

LEAD.—The market is stronger. Prices are unchanged at $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE.—Business keeps brisk with prices stiff. We quote per 100 ft.: Black pipe, ⅛-in., $3; ¼-in., $2.30 to $2.40; ⅜-in., $2.65; ½-in., $2.85; ¾-in., $3.65; 1-in., $5.20; 1¼ in., $7.35; 1½-in., $8.95; 2-in.,

$12.55; 2½ in., $20 to $21; 3 in., $24 to $25; 3½ in., $30 to $32; 4 in., $37.50 to $38.

ZINC SPELTER.—There is not much doing. We quote 5 to 6c. per lb.

ZINC SHEETS.—Business has improved. We quote the base price as follows: Cask lots, 86 to 86.25 and part casks, 86.25 to 86.50.

SOLDER.—A good demand is noted. Prices are steady at 20c. for guaranteed half and half, and 17 to 18½c. for wiping.

ANTIMONY.—Business is in small lots. The price is steady at 89 per ton.

HIDES, SKINS AND WOOL.

HIDES.—The market is weak and there is a large supply. Prices are as follows: No. 1 green, 7½c.; No. 2 green, 6½c.; No. 1 green, steers, 8c.; No. 2 green, steers, 7c.; cured, 8¼ to 8¾c.

CALF SKINS.—This is an off-season for calf skins, and business is dull. We quote as follows: Veal skins, 6 to 14 lb. inclusive, No. 1, 10c.; No. 2, 8c.; do., 15 to 20 lb. inclusive, No. 1, 9c.; No. 2, 7c.; deacons (dairies), 60 to 70c. each.

SHEEPSKINS.—These find a ready sale in consequence of the improvement in the wool market. We quote 80 to 90c.

WOOL.—Fleece wool is pretty well marketed. There is a fair demand from the mills for pulled wools and various grades of foreign wools. Our prices are as follows: Unwashed wool, 8 to 8½c.; fleece wool, 15c.; pulled wools, super, 15 to 16c. and extra, 19 to 20c.

TALLOW.—The market is very dull. We quote 5¾ to 6c. per lb., on track, Toronto, and 6¼ to 6½c. out of store.

SEEDS.

The market for seeds is quiet and the condition practically unchanged. Alsike is offering in limited quantities at $6 to $7.25 per bushel. Red clover is quoted from $6.50 to $7. Timothy, $1.60 to $2 per bushel, prepaid aboard at outside points. For extra choice to fancy qualities a little more may be paid, and for lower grades prices are below these.

PETROLEUM.

The demand continues active. An advance of ½c. is reported by The Queen City Oil Company this week. The Union Petroleum Company have not made any change, their prices being as follows: Lily White, Canadian, 17½c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 20½c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less. The Queen City Oil Company quote as follows: Sarnia Prime White, 18c.; Sarnia Water White, 20c.; Family Safety, 20½c. in bbls.; Pratt's Astral, 20c. in bulk.

OLD MATERIAL.

Iron scrap is high, the receipts being light, owing to the abundance of snow. We quote: Heavy copper and wire, 10c. per lb.; light copper, 8 to 8½c.; heavy red brass, 9½c.; heavy yellow brass, 8 to 8½c.; light brass, 5 to 5½c.; lead, 2 to 2½c.; scrap zinc, 3c.; iron, No. 1 wrought, $13 per net ton; No. 2 wrought, $4.50; machinery cast scrap, $15.50 to $16; stove plate, $10; malleable and steel, $6 to $6.50; old rubbers, 6½c. per lb. and country mixed rags, 50c. per 100 lb.

MARKET NOTES.

Turpentine is 3c. higher.

NOVA SCOTIA MARKETS

Halifax, January 12, 1903.

THE hardware trade has not been very heavy during the last week, only the small business natural at this season of the year keeping the wheels of trade slowly moving. Therefore, much attention is being given to sorting up of store stocks and making everything in proper shape for the rush of spring trade when it comes on.

* * *

Encouraging reports are coming in from various sections of the country, and this enables the wholesalers to gauge pretty accurately how much stock of various kinds they will have to keep on hand and their orders are being made up accordingly. The consensus of opinion seems to be that there is a good year's trade ahead and preparation is being made accordingly.

* * *

Building materials are decidedly firm with a fair demand, which will increase largely in a month or two. Roofing material has advanced and quotations now are: Three-ply, $1.20 per roll; two-ply, 95c.; tarred felt, $1.80; tarred sheathing, 15c.; dry sheathing, 35c. The price of wire nails remains unchanged at the recent decline. There has been considerable talk at times during the last year with reference to the greater manufacture of the latter product in Canada. In fact, it was thought a few months ago that Sydney, the Nova-Scotian iron centre, would have a large wire nail factory. It is claimed, however, that without a large increase in the duty it would be useless to compete against the United States manufacturers. This is no doubt one of the points which would come up in Mr. Tarte's late campaign for higher protection, or in the Conservative leader's announcement in favor of "adequate protection." The present price of wire nails, however, is quite satisfactory to the consumers.

* * *

There is no especial change in the cordage situation, except that sisal has been reduced to 11c. base to make it on a parity with manila. The dealers predict that higher prices will prevail later in the season, and wholesalers who are confident of this will probably be large buyers at present quotations. There is little doing in cordage just now, but the spring demand will soon open.

* * *

There have been no price changes in oils during the past month or so. Turpentine is now quoted at 79c.; raw linseed oil is quoted at 75c., in bbls.; boiled, 78c.—in both cases 5c. additional being charged for smaller quantities. There is not a heavy business in these doing at present. Illuminating oil remains unchanged. The principal portion of the local supply is brought here in tank steamers and stored in a large tank on the shore of the Bedford Basin, above the city. A steamer arrived about ten days ago with 775,000 gallons.

* * *

The exports from Halifax for the week ending the 10th, amounted to $125,391, of which about $86,000 is attributed to shipment of deals to Great Britain, where there is a good demand at remunerative prices. The apportionment is as follows: To Great Britian, $74,651; United States, $36,872; Newfoundland and St. Pierre, $13,868.

MANITOBA MARKETS.

Winnipeg, January 12, 1903.

BUSINESS is moving steadily, and present, it is satisfactory and all though the volume is not large at indications point to a heavy spring trade.

The Implement men are busy closing up the winter business. Nearly all the implement houses sell carriages and sleighs, and as snow came early this winter, the sale of cutters and fancy sleighs has been large. The outlook for the carriage trade in the spring is good.

NOTES.

The Western Hardware Company is a new claimant for business at Regina. It is proposed to do a general hardware trade.

It is probable that English binder twine may be offered on the Winnipeg market this coming season. Samples are already on exhibition here.

The annual meeting of the Winnipeg Implement and Carriage Dealers' Association was held Saturday afternoon in the Board of Trade rooms.

George Napier has bought the bankrupt stock of W. A. Irving, at Austin, and will put in a new and complete line of shelf and heavy hardware.

J. W. Martin, the vice-president of The Gurney Stove Company, is visiting Montreal, Hamilton, and other eastern points in the interests of the business.

The McLaughlin Carriage Company's fine new building will be ready for occupation shortly. The Canada Cycle and Motor Co. are leasing the premises formerly occupied by The McLaughlin Company.

ALL RIGHT AGAIN.

The Canada Hardware Co., Montreal, have everything in working order after the fire, and are now ready to look after all orders. Their travellers are all on the road again.

NEW ASSISTANT MANAGER.

E. M. Cote, for the past 22 years connected with Frothingham & Workman, has been appointed assistant manager for the Canada Hardware Co., Montreal.

ATTRACTIVE LINE OF HAMMOCKS.

The Hoffman-Corr Co., 118 Bay street, Toronto, have now stocked in their warehouse an exceedingly attractive line of hammocks. This firm are making preparations to get a considerable slice of the hammock trade this year, so it would be well for hardwaremen to correspond with them before placing their orders for this line.

A NEW AGENCY.

Decatur, Bull & Co., Montreal, have been appointed sole agents in Canada for the Hay-Budden Manufacturing Company's anvils. This New York company turns out more anvils than any other makers in the world, and although it is the first time they have had an agency in Canada, their anvils are as well known here as in the United States. Decatur, Bull & Co. have experienced an immense demand for them, and they have a full line of vises to accompany the anvils.

The People's Almanac of 1903, a supplement to The Gazette, Montreal, appeared a few days ago. The cover is made quite attractive by a cut of the Canadian flag printed in two colors.

PROFITS FOR EMPLOYES.

IN a double circular, one to the stock holders and the other to the officers and employes, The United States Steel Corporation announces its intention to inaugurate a system whereby the humblest workman on its rolls may, if he desires, become a permanent stockholder, and share in the profits of the Corporation.

The scheme is the result of months of preparation by the finance committee of the Corporation, and the circulars are signed by G. W. Perkins, chairman. The plan is said to have originated with Mr. Perkins.

The plan inviting officers and employes to participate is divided into two parts. Part one prescribes that from the earnings of the Corporation during the year 1902 there will have been set aside at least $2,000,000, and as much more as is needed for the purchase of at least 25,000 shares of preferred stock, which will be offered to employes of the Corporation and constituent companies.

At present the Corporation and subsidiary companies employ 168,000 men, whom it is proposed to divide into six classes, ranging from their receiving $20,000 a year or over down to men earning $800 yearly or less. The preferred stock will be offered to any employe during January at $82.50 per share. (Its closing price on December 31 was $85.87½.) Employes can subscribe for an amount of stock not exceeding the sum represented by a certain percentage of their salaries.

WHAT CONSTITUTES PROFITS.

The question of what constitutes profits is to be determined entirely by the finance committee, which, it is stated, will have no interest in the profit sharing plan. If $80,000,000 is earned in the coming year, $800,000 will be set aside, one half to be distributed in cash quarterly, the other half to be reserved until the end of the year, and invested in preferred stock, the stock thus purchased to be divided one-half to employes entitled thereto, the other half to remain with the treasurer of the Corporation. Each shareholder is to receive a certificate for his interest containing these provisions:

First—If he remains continuously in the service of the Corporation or of one or another of its subsidiary companies for five years, the stock shall be delivered to him, and he may do as he likes with it.

Second—If he dies or becomes totally and permanently disabled while in the employ of the Corporation or of one or another of its subsidiary companies, the stock will be delivered to his estate or to him.

Third—He can draw the dividends declared on the stock while it is held for his account, and he remains in the employ of the Corporation or of one or another of its subsidiary companies.

MUST WORK FOR FIVE YEARS.

Fourth—That if, without previous consent voluntarily, he shall have quitted the service of the Corporation or of its subsidiary companies, he shall forfeit all right to this stock, and in such case it will be held in a fund, which, at the end of five years, will be divided among such employes as shall have complied with the conditions.

Thus 25 per cent. of all the money set aside in this profit-sharing plan will be held for five years, and will be given to such only as at the end of that period shall be in the employ of the Corporation or of one or another of its subsidiary companies from and after January 1, 1903.

High officials of the Steel Corporation declined to-day to discuss the reported approaching retirement of President Schwab.

BUSINESS CHANGES.

PARTNERSHIPS FORMED AND DISSOLVED.

STONEHOUSE & WILSON, agricultural implement agents, Ottawa, have dissolved partnership. The business will be continued by W. G. Wilson.

Nesbitt & Story, agricultural implement agents, Peterboro', Ont., have dissolved partnership.

Mann & Ross, general merchants, of Ototoks, have dissolved partnership, Gilbert Ross retiring.

Mr C E SONTUM, Christiana, Norway.

Commercial Agent for the Canadian Government for Norway, Sweden, Denmark and Finland. Norwegian Commissioner at the World's Fair, Chicago, from whom an interesting letter appears in another column

Goulet Freres, Montreal, Que., have dissolved partnership. A new partnership has been registered.

Hemphill & Lathem, blacksmiths and carriage builders, Maple Ridge, Que., have dissolved partnership.

Whitman &. Co., general merchants, of Emerson, Man., have dissolved partnership. J. W. Armstrong and H. H. Hall have retired.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

Sheridan & Co., general merchants, of Beeton, Ont., have assigned in trust.

D. Lacerte, general merchant (late), has assigned to D. W. Adam, Prince Arthur.

The sheriff is in possession of the stock of T. H. Logan, general merchant, of Carberry, Man.

Holstein Bros., general merchants, of Vermachar and Arden, Ont., have assigned to Richard Tew.

Dodgson Bros., general merchants, of Duart, Ont., have assigned to C. S. Scott, Hamilton. A meeting of the creditors was held on the 12th inst.

SALES MADE AND PENDING.

The business of John Dunnell, blacksmith, St. Marys, Ont., is advertised for sale.

E. Henry, general merchant, Waskada, Man., is advertising his business for sale.

F. E. Benor, general merchant, Creemore, Ont., has sold his business to D. J. Downey.

Cahill Bros., general merchants, Lake Talon, Ont., have sold out to Chas. H. Lamarche.

The Hardware Manufacturers' Agency, hardware importers, of London, Ont., have sold out to T. L. Broderick.

G. Grondin, general merchant and hotel keeper, of Notre Dame du Portage, Que., is advertising his business for sale.

The Smith & Fergusson Co., Limited, hardware merchants and implement agents, Regina, N.W.T., have sold their implement business to R. E. Mickleborough.

NEW FIRMS AND CHANGES.

L. Rousseau & Frere, machinists, of Quebec, have registered.

The Federal Oil Company, of Montreal, is seeking incorporation.

A. McFarlane & Co., metal brokers, etc., Montreal, have registered.

The Londonderry Iron and Mining Co., Limited, Montreal, has registered.

Thuron & Lalonde, general merchants, of The Brook, Ont., are removing to Hammond.

The Simplex Railway Appliance Company, of Canada, Limited, has been incorporated.

Hastings & Kiltie have succeeded Hastings & McDowell, general merchants, of Sintaluta, N.W.T.

The Hull Co., Limited, of Findlay, Man., are applying for incorporation as general merchants.

FIRES.

Mills, Stanley & Co., general merchants, Hamilton, Ont., have been burned out; insured.

DEATHS.

George E. Bell, hardware merchant, of Toronto, is dead.

Angus M. McLean, general merchant, of Bathurst, N.S., is dead.

TRADE CHAT.

John Young, of Wingham, Ont., has removed to London, Ont., to accept a position in a wholesale hardware house.

The firm of Greenleaf & Son, of Belleville, dealers in sporting goods, bicycles, typewriters, electrical goods, etc., are putting in a line of shelf hardware.

The paragraph which recently appeared in HARDWARE AND METAL to the effect that The Yukon Hardware Co., Limited, had purchased the stock of McLennan, McFeely & Co., Limited, at Dawson and Vancouver, was only partly correct. It was the stock in Dawson only which the former firm had purchased.

HEATING AND PLUMBING

GAS V. ELECTRICITY.

THERE is no doubt whatever that the extension of electric lighting has put the gas companies on their mettle, and that consumers are now getting better as well as cheaper gas than would have been the case had no such competitor as electricity appeared upon the scene, says Ironmonger. The almost feverish haste with which the gas company in my neighborhood recently substituted incandescent fittings and mantles for the old-fashioned flat-flame burners, and more recently still supplied brand new lanterns with handsome porcelain reflectors throughout the district, was admittedly done to keep out the electric light, and not from any motive of philanthropy or benevolent desire to dispel the obscurity which formerly prevailed. Near where I live a few electric arc lamps have been set up, and the effect at night is decidedly pleasing, but, when after a certain hour the arc lamps are switched off and the lower glow lamps are switched on, the contrast is painfully striking. Incandescent electric lamps for street lighting are, in truth, a dismal failure, and vastly inferior to incandescent gas.

For indoor lighting, however, electric glow-lamps offer the advantages of cleanliness, convenience, and freedom from air vitiation, and where cost is no object this method of illumination undoubtedly scores. But for tradesmen who find it necessary to practise economy, electric lighting is rather too expensive. This view of the matter is cleverly set forth in a pamphlet issued by certain provincial gas companies, in which the experience of various municipalities with gas and electric lighting are succinctly narrated, the most striking testimony in favor of gas being that given by the Liverpool city council, who, after making their own electricity for some time for street lighting, have arrived at the conclusion that gas is quite as effective, while costing much less than electricity.

Another serious drawback attending the substitution of electricity for gas in public buildings, especially churches and chapels, is the unpleasant down-draughts which frequently result owing to the glow lamps giving off less heat than the gaslights, and being insufficient to counteract the flow of cold air on to the heads of the audience. The use of hot water pipes placed 20 to 25 feet above the floor is said to cure the evil, but as it is costly as well as troublesome to instal pipes in such a position in existing buildings, the tendency seems to be to revert to a partial use of gas in electrically-lighted buildings so as to check the down-draught nuisance. If judiciously introduced the two kinds of light go very well together, while decoratively the dual system can be harmonized without difficulty.

JOURNEYMEN PLUMBERS' OFFICERS.

The following officers have been elected by the Toronto Local Union No. 46, of the Plumbers, Steam and Gasfitters' at the regular meeting held on Wednesday night: President, J. A. Dougan; vice-president, W. J. Storey; recording-secretary, W. N. Braybon; financial secretary, P. McCann; treasurer, F. Maxwell; inside guard, C. Horn; outside guard, J. H. Brown; trustees, D. McMillan, T. McCann and F. Jenkins. Sick Committee.—F. Butters, J. S. Grassick, D. Cruickshanks and A. Gill. Finance Committee.—A. Lowery, J. Priestly and C. Randell. Delegates to Building Trades' Council.—J. A. Dougan, J. Richards and W. N. Braybon. Executive Committee.—J. A. Dougan, W. N. Braybon, J. Richards, P. McCann and F. Maxwell.

THE COST OF GAS MANTLES.

There is a price below which a reliable gas mantle cannot be produced. A writer in The Scientific American, who is evidently versed in the practical manufacture of mantles, contributes to a contemporary the information that the chemicals in 1,000 mantles cost $17.50; the fabric prepared, $13; the shaping, $11; coating, $3.75; boxing, labelling and packing, $3.75; profit and selling expenses, $6; total, $60.

TORONTO PLUMBERS "AT HOME"

The Toronto journeymen plumbers will hold their annual "At Home" in the Temple Building on Friday evening, January 30. President J. A. Drogan is chairman, and W. A. Braydon, secretary of the committee who have the affair in hand, so a good time is assured, as has been the case with the social affairs of this union in the past. Tickets will be $2; single tickets, $1.25.

BUILDING NOTES.

THE Imperial Bank has decided to erect an office building at the corner of St. James and McGill streets, Montreal.

Thomas Welch and J. G. Weir are erecting new houses in Otonabee, Ont.

The farmers about Hartney, Man., will erect a 70,000-bushel elevator near the Canadian Northern track early next summer.

There were over 40 dwellings and many fine business blocks erected in Louisburg, C.B., last year, and this year it is expected to be equally as busy.

J. R. Eaton has the contract for building a 200 x 45 ft. factory for The Dominion Wrought Iron Wheel Co., of Orillia, Ont. The building will be metal-clad.

It is reported in Winnipeg that the Canadian Northern Railway have purchased an entire block in that city on which to erect a large hotel and station.

The building outlook for the season of 1903 is the rosiest in the history of Winnipeg, says The Telegram, of that city, and from present indications should be about 50 per cent. ahead of last year. At least two new bank buildings will be constructed, and there are several warehouses, either under construction or to be erected. A big Chicago firm is going to build residences here in the coming spring on a very extensive scale. It is its intention to put up at least 100 good residences. This will be a boon, and will greatly help the people who are clamoring for homes.

MONTREAL.

The property at the southwest corner of St. James and McGill streets, formerly occupied by Thomas May & Co., and which was destroyed by fire in January, 1901, has been purchased by the Imperial Bank, and they will build in the spring. The bank will occupy the ground floor and the rest of the building will be used as offices. Taylor & Gordon will be the architects.

TORONTO PLUMBERS STILL BUSY.

While there are not many important contracts being secured just now there is no lack of work for Toronto plumbing houses, as there are many contracts still uncompleted and much repair work caused by the steady cold weather of the last day or two. A big rush of work is looked for in the spring.

A Good Paint Business

Are you after it?

There are going to be some surprises in the paint business in 1903.

The biggest surprise will be the enormous sales for those who go after it.

Get after it with a paint that has a record. Cheap paint won't help you.

RAMSAY PAINTS will get you a slice of this big business as it has done for hosts of others.

Want to try?

THE GUELPH ACETYLENE SYSTEM.

THE Guelph Acetylene Gas Generator Company, Limited, Guelph, Ont., are introducing their apparatus on the British market as well as throughout Canada. The apparatus is made on the carbide to water system. The machine consists of a gas holder for storing the gas, and the generator, the upper part of the latter containing two cylinders, divided into compartments, in which the carbide is placed. The lowering of the gas-holder as consumption proceeds automatically empties the compartments, one at a time, and allows the carbide to fall into the water on to a wire grate. As the gas comes off it bubbles up through the body of cold water, which cools it at once and removes any impurities which might otherwise pass off with it. Between the generator and the holder the gas passes through a condenser. When all the compartments of the cylinder are empty it may be taken out for re-filling, use being made in the meantime of the other, so that by alternately filling these receptacles a constant supply of gas can be had. The regulation of the supply of carbide prevents any more gas going into the holder than it is arranged to hold. A dial outside the generator indicates which holder is in use. The residue resulting from the decomposed carbide sinks to the bottom of the generator tank and is drawn off through a grate, there being no escape of gas while this is being done. The advantages claimed for the system are the automatic regulated supply of carbide, the impossibility of after or excessive generation, complete extraction of gas from the carbide, purity of gas, absence of smell, and simplicity of mechanism.

BUILDING PERMITS ISSUED.

TORONTO.

D. Schwalm, for pair dwellings at 176-178 Ossington avenue, to cost $4,000.

Wm. Hall, two dwellings near Dundas street on Boustead avenue, to cost $1,400; W. Hall & Son, builders.

The Acme Loan and Savings Co., six dwellings, 191-201 Shaw street, to cost $10,800; James Claxton, builder.

Metropolitan Bank, for $1,500 alterations to bank premises, corner Bathurst and College streets; Darling & Pearson, architects.

The York, Loan and Savings Co., for two dwellings at 250-266 Roncesvalles avenue, to cost $1,500 each; R. H. Sanderson, architect.

PLUMBING AND HEATING NOTES.

W. Plaxton, of C. & W. Plaxton, plumbers, Winnipeg, is dead.

The trouble between Lemmon, Claxton & Lawrenson and the Plumbers and Sheet Metal Workers' Unions at Kingston, Ont., has been amicably settled.

Frank McKnight leaves this week for New York, where he will take up studies in steam heating. Mr. McKnight is one of Owen Sound's enterprising young men, who is taking a thorough technical course at his occupation as a plumber and steamfitter.

Tenders are to be asked for electric-wiring the Hamilton, Ont., city hall. They will be subject to plans prepared by the city engineer and to the approval of the fire underwriters' inspector. All tenderers to employ union labor.

The Canadian Pacific Railway have inaugurated a new department on the Atlantic Division and have appointed W. W. Husband as agricultural agent, who will assist in every way the agricultural and industrial development of the country. Dairying and cattle raising, by the latest methods, will be encouraged, as also will potato and apple-growing.

ADVERTISING FRAUDS.

By J. L. Troy.

THE question of publicity, "advertising," is one of prime importance to the progressive business man. How to get the best results for the least money is a matter which interests every advertiser who has a message to convey to the public. Every up-to-date business man concedes that advertising well and judiciously placed in mediums of recognized worth and circulation pays. The selection of the proper medium requires careful consideration, as many unworthy fake schemes are constantly being foisted on the advertising public. There are more fakers in the advertising line possibly than in any other calling, due principally to the fact that the average business man is not so well posted in the matter of advertising as he might be. The average business man is altogether too willing to give ear to the plausible story of the slick advertising faker, who has, according to his own story, the best thing in the advertising line on earth to offer.

Some of the advertising fakes now worked successfully, particularly on this side of the line, are old. Notwithstanding all that, there are merchants thoughtless enough to try them and pay largely for the privilege of trying. Those are the merchants who will tell you that they spent two or three thousand dollars, as the case may be, last year in advertising, and that results were not satisfactory. All the money wasted in fake schemes is charged to advertising. The writer knows one firm that spent twelve hundred dollars last year, out of a total appropriation of two thousand, in fake advertising schemes purely and simply. This firm complained they did not get adequate returns for the amount spent in advertising and condemn advertising in unmeasured terms.

The reputable daily or weekly newspaper of known circulation for the retailer is unquestionably the best he can employ to reach the buying public. For the manufacturer, wholesaler or jobber, a reliable trade paper should be employed to carry his announcements to the merchant. We advise the advertising public to give a wide berth to the oily-tongued advertising faker. He arrives in our midst wearing a suave debonnair air, knows it all, is very smooth and plausible and usually catches the business man napping, and, of course, works him for an order.

He comes sometimes as the self styled agent of some respectable fraternal society from whom he gets permission to get up a programme for a concert or entertainment. His modus operandi is this: He secures permission from the secretary or some person else in authority in some fraternal or other society organization or trade union to get up a programme, he agreeing to furnish the programme free of charge. He then goes among the business people soliciting advertisements from them in the name of the organization which gave him the privilege, levying blackmail purely and simply until he reaps a rich harvest.

Then, again, there is the faker who gets up hotel advertising, such as hotel registers, combination counter stands for hotels, blotters for the writing table, clocks set in a frame containing advertisements, writing desks with ads. in the back, etc. The gentleman who gets up this form of advertising, first gets the assent of the hotel proprietor to his proposition to furnish him with a register, or some other requisite free of charge. The next step is to secure the names of those from whom the hotelman buys his supplies.

After the names have been secured the slick advertising faker goes around and solicits advertisements in the name of the hotel proprietor. Another case of blackmail, but he gets the advertisements and afterwards the cash.

Another is the so-called industrial number for some paper. The ad. faker in this case goes to some publisher of a weekly or daily and agrees to pay a certain sum of money for a certain number of copies of the paper to be published on a certain day, and distributed with the regular edition. That done, he proceeds to write a short sketch about the town, publishing a cut of the city hall and chief magistrate, perhaps. The rest of the number is made up of write-ups of the business houses for which he charges so much per line. He will tell an advertiser that the number of copies printed will be so much, when, as a matter of fact, not over one-fourth the number promised will be printed—often even less than that.

The fellow with the calendar fans, notions, and countless other things, all more or less worthless fakes appears on the scene quite frequently and gets his share of what is going.

The merchant who pays his money for such a class of advertising as we have just mentioned does not get value for his money. He is the man who will tell you that he spent so much money last year in advertising and it did not pay him, but when you come to analyze his advertising account you will find that the greater portion he wasted in some fake proposition or scheme.

A special Christmas publication recently secured nearly 200 advertisers. On the promise of 15,000 circulation several men used it who do not advertise in any of their local papers. As a matter of fact, only 200 copies were printed. They were used by the faker to leave with each advertiser when he collected his account.

Profitable advertising is not an accident; it is the result of careful thought along common-sense lines. If the advertiser is new in the business it would be well for him, perhaps, to consult with some of his friends in business who have advertised extensively and made a success of it. If he has no such friend in business with whom he can consult, then he should take into his confidence a man experienced in advertising, a capable honest man connected with some well-known honest publication, listen to his advice, and be guided by what he tells him. Always remember one thing—don't listen to the unknown advertising faker who is here to-day and away to-morrow. He is not out for your good, he is after your dollars.

Advertising well and judiciously placed in respectable newspapers and trade journals of known circulation pays, and pays well, but your money is absolutely thrown away when invested in fake advertising schemes.

"AFTER MANY DAYS."

The office Specialty Company, manufacturers of desks and office furniture, had an advertisement in the spring trade number of "Hardware and Metal" two years ago.

The other day they received an order through that advertisement from the Anglo-Egyptian Bank, Gibraltar, for a complete outfit of roll-top desks, chairs, and other office furniture for that bank. This paragraph will probably be the first intimation that The Office Specialty Co. have that they owe this order to "Hardware and Metal." Unfortunately, no matter how good his intentions are, the average writer, who makes inquiry or sends an order in response to an advertisement, seldom gives the source from which he got his information.

NEW ONTARIO IRON RANGE.

THE new iron range in Ontario, north of Sudbury, discovered by State Railroad Commissioner Chas. S. Osborn, of Sault Ste. Marie, Mich., was privately financed long ago, and will be privately developed. An offer, it is understood, of $2,000,000 has been tendered and refused.

The range is located in what is known as the Moose Mountains, and iron formation extends over 30 or 40 miles. The principal discoveries of apparent greatest value have been made in that portion of the range along the west branch of the Vermilion River, prolonging northwest and southeast into the township of Hutton, in the Nipissing District. Out of this township to the northwest, the range runs into an unsurveyed territory of the Algoma District.

The company whose organization was announced in The New York Commercial, control five miles of land along the formation, and cover the largest discoveries made up to the present time.

The range has been visited and inspected by many of the leading ore experts of the United States and Canada, and at least one from England, Germany, and Sweden.

A most thorough and complete magnetic and geological survey of the country controlled by the two companies has been made by Professor Kenneth Leith, of the University of Wisconsin, and also a member of the United States Geological Survey. It was Professor Leith who made the survey and maps of the Mesaba and Vermilion ranges for the Government, spending five years on the Vermilion range alone in carrying on this work.

Consequently, it is acknowledged he knows more than anyone else of the Vermilion range, and is not likely to be mistaken when he says that the Moose Mountain range is the same as the Vermilion in age and formation, except the ore of one is hematite and the other a magnetite.

The Moose Mountain range, according to the statements of Professor Leith, is more regular and strongly defined on the surface. He estimates there is in sight at present on the properties of the companies, without practically any exploration or development, at least 10,000,000 tons of 60 per cent. ore, providing the ore prolongs to a depth of 250 feet. At a depth of 1,000 feet, the ore in sight would be more than 40,000,000 tons. Ore of the same character is now being mined at a depth of 2,000 feet.

Of ore of a lower grade, but yet valuable, Professor Leith estimates that there are 140,000,000 tons in sight, at a depth of 250 feet. To carry the figures to a depth of 1,000 feet is to stagger the imagination.

H. D. Fisher, discoverer of the Menominee range, says this latest discovery is the greatest of which he has ever known, excepting the Mesaba range.

The work accomplished up to the present time has consisted in locating and securing titles to the properties, road building, camp building, diamond drilling, trenching, cross-cutting, and test pitting. In this work there has been expended over $100,000.

It is expected a railroad will be built into the property by the middle of next season, and already applications have been made for the sale or lease of iron properties and for town sites.

REGINA STORE CHANGES HANDS.

The property and business owned and operated by J. A. Kerr, as a hardware store, has changed hands and will soon be in full charge of The Western Hardware Company. The new firm is composed of three of the brightest and most promising of the younger business men of the town, each one an acknowledged master in his own department. T. W. Peart, of The Smith & Fergusson Company, will take charge of the store and stock of hardware, furniture and furnishings. G. H. Barr will handle the finances, and our old friend, Arthur Jackson, also of The Smith & Fergusson Company, will have charge of the tinshop and mechanical department. With such heads of departments there cannot be any doubt as to the ultimate success of the undertaking. We extend our congratulations to our enterprising young friends and bespeak for them a share of the public patronage which they will undoubtedly merit.—Regina, N.W.T., Standard.

THE LAKE ST. JOHN VALLEY.

EVERY day Canadians are having their eyes opened to the wonderful possibilities of their country. New regions with immense natural resources are being constantly brought to their attention. Usually these new fields of enterprise are situated thousands of miles away, either in the Far West or in the Far North. But there is a district of Canada which is being at present exploited that lies not two hundred miles from the ancient capital. This is The Lake St. John Valley, which for extent and resources is second to no other district in the Dominion.

Conjointly, the Quebec and Lake St. John Railway and The Lake St. John Colonization Society have issued a handsome souvenir book about this district, entitled, "Wheat Fields and Industries of Northern Quebec." The contents read in many parts like a fairy tale and the numerous large illustrations bear out the wonders related in the reading matter. The object of the book in its own words is "to tell of the attractions which the Lake St. John country possesses for the farmer and the farm laborer, both in its wheat and dairy lands; for the European workman in its mills and factories; for the lumberman and the miner, and especially for the capitalist and the speculator who have money to invest in rich forests and mining lands, and in the magnificent waterfalls which furnish such cheap and easy methods of developing the great natural resources of this wonderfully rich and fertile country."

This object has been amply accomplished in the half-hundred pages of this souvenir book. The contents are methodically arranged and the important points receive their due emphasis.

The reason for using Apollo galvanized iron is: it is the best iron: works easiest: makes the best job, and costs least for labor.

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

LIMITED.

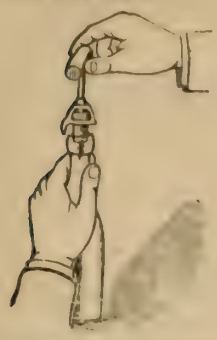
NO. 22.

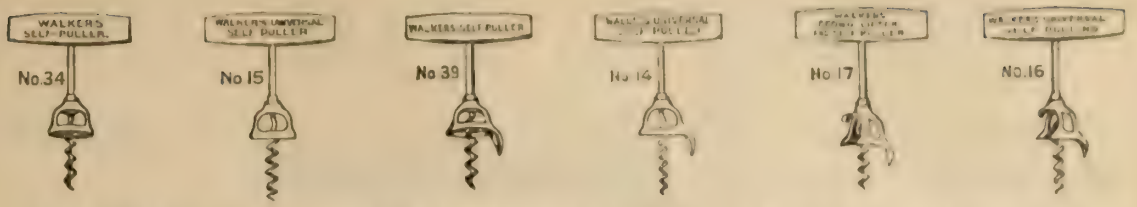
No. 33 (double blade) is similar in construction and finish.

Something New!

THIS is an entirely new style of mincing knife of our own design. The shank is a flat tinned steel band, drawn tightly into a groove encircling the handle, the blade being riveted between the ends. This construction does away with any hole in the handle, which consequently cannot split or come loose. The handle itself is stained and shellacked, the whole making the neatest and strongest mincing knife ever put on the market.

MADE ONLY BY **The P. R. Cumming Manufacturing Co., Limited, Clarksburg, Ont.**





Walker's Self-Pulling Cork Screws

OUR TRADE A MARK

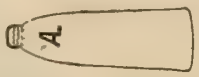
AUER LIGHT MANTLES
LONGEST LIFE & BRIGHTEST

OUR TRADE A MARK

The Value of Annealing.

Annealing is the most costly step of mantle making—consequently a cheap mantle cannot be properly annealed—That is the reason a cheap mantle caves in like this if you lay it on its side, after burning off the coating—Try one—They injure your trade.

Mantles branded A are thoroughly annealed over pressure gas—They fit the burner—They don t shrink—They stand up this way—They are reliable—They help your trade.



—We are the sole manufacturers of A mantles.
—Write us if you are interested.

Lowest prices on Mantles, Shades, Chimneys, Globes and Sundries.

The Improved B. PATTERN "NEWMARKET" may now be obtained from all jobbers.

Detachable Plates.
Improved Cap with Long Bearing.
Rigidity and Easy Running.
Accurately Machined and Perfectly Fitted.

All Parts Interchangeable.

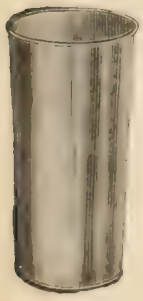
MANUFACTURED SOLELY BY

BURMAN & SONS, LIMITED

BIRMINGHAM, ENGLAND.

Supplies for the Maple Syrup Season.

Sap Buckets . . .



—EXTRA DEEP AND STRAIGHT.
—THREE SIZES.

They possess many advantages over the ordinary flaring Buckets—being small in diameter they do not catch the rain or snow, and as they are very deep, they hang perpendicularly, and consequently will not overflow until full.

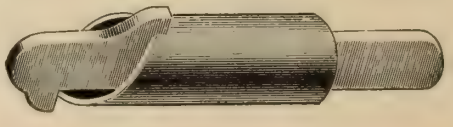
—Covers supplied if required.
—They nest close for shipping or storing.

We can also supply the ordinary Flaring or Western Sap Pails.

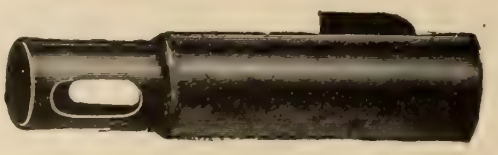
E. T. Sap Spouts.

MADE OF RETINNED STEEL—STRONG AND DURABLE.

Only require a ⅜-in. hole in tree.
It does not cover the inside surface of the hole; therefore a larger amount of sap is obtained.
Packed in card-board boxes.



Maple Leaf Sap Spouts.



Made in Bronzed Steel.
Require a ½-in. hole.
Has a shoulder which prevents it being driven in too far.
The hole in the tree is not exposed to wind and snow; consequently, sap will flow longer.
Packed in card-board boxes.

Syrup Cans, round or square.

Plain or decorated. Made in ¼, ½, and 1 gallon sizes.
Either Wine or Imperial Measure.

A full stock carried in all lines; orders shipped promptly.

LOWER PRICES ON WIRE.

REDUCTIONS in barb and galvanized wire are reported this week. The base price of barb wire is now $2.55 from Cleveland, a reduction of 12½c., though the price of carlots is only lowered 10c., the quotation now being $2.45. From stock, Toronto, the price is $2.80, a decline of 20c. Three numbers of galvanized wire, Nos. 9, 12 and 13, show reductions of 15c., the prices being: No. 9, $2.50; No. 12, $2.65; No. 13, $2.75.

The cause of the reduction is the competition of German wire, which has been selling somewhat freely, about 5 per cent. of last year's total consumption of wire in Canada, having come from Europe. Toronto jobbers state that it is generally conceded that wire produced in Montreal or Cleveland reaches the consumer in much better shape than does the wire which has had to cross the big salt-water pond. Yet the price made a demand for it and an attempt is being made to satisfy the entire Canadian market with Montreal or Cleveland wire, hence the reduction.

THE LATE SENATOR WOOD.

NO death in Canada of recent years, among the ranks of business men, has probably excited so much interest and regret as the demise of Senator Wood of Hamilton.

We believe, with one exception, that his active interest in the hardware trade extended over a larger number of years than any other man in it, while the firm of which he was the honored head is known far and wide throughout the country.

But aside altogether from his long sevice and the importance of the firm with which he was connected he possessed a genial and striking personality that brought him into prominence in public as well as in commercial life.

While in the House of Commons, and later as a member of the Senate, he applied to the affairs of State the business principles which for over half a century had been the foundation of his success in commercial life. He is gone. And while he has not for some years taken a very active part in the affairs of his own business, the commercial interests of the country as well as the affairs of State will lose by his departure.

A SCARCITY OF COKE.

THE effect of the coal strike is now being felt in Canada in a new way. The output of coke has been curtailed owing to the heavy demand for soft coal for fuel. As a result of this the blast furnace at Hamilton has been compelled to reduce its output. On Friday last the following letter was sent out by The Hamilton Steel and Iron Co., Limited, to some of the largest purchasers of pig iron:

We regret to advise you that owing to the difficulty we are experiencing in getting coke forward we have been obliged to slow down our blast furnace which, of course means a reduction in our product. We are putting forth every effort to get the railway companies and the coke companies to ship the coke but so far the measure of our success has been small. We notify you as to this condition of affairs as you may wish to procure some pig iron elsewhere in order to ensure you against any stoppage at your works.

"This is more serious than one might think," said the manager of one of the largest foundries in Canada to HARDWARE AND METAL. "The blast furnaces are now sold months ahead of their output, and a stoppage of such a furnace so important to Ontario founders might mean that more than one foundry or machine shop in the Province would be much embarrassed, if not compelled to shut down."

How serious the situation may be will, of course, depend on future developments which will be followed with an interest almost akin to anxiety.

THERE is a storm gathering in Ontario, chiefly among business men, over Provincial University affairs. It is growing slowly, but it is coming.

The Province has contributed liberally to the financial support of the apex of its much-vaunted educational system, and it has sent from every county the young men no country in the world has ever produced better raw material—to be moulded into great citizens. Instead, it has turned out indifferent lawyers, doctors and clergymen by the dozen.

The results have been most disappointing; and it is the fault of the system, and the system is due to the inferior administration.

On the other hand, McGill, the leading Quebec university, is doing such good, practical work for the students handed over to her charge that Toronto citizens some of them identified with Toronto University—are actually sending their sons to Montreal to be trained. Graduates of Toronto University often have difficulty in getting a start in life: recently, every engineering student in McGill University had an offer of a place long before he graduated.

Compare the governing bodies of both institutions in the parallel columns above. This is the direct explanation. A similar comparison of the teaching staffs is the indirect, for they are selected by the governors. One is a committee of giants most of them men with world-wide reputations; great men; men who have accomplished great things. The other has a few men who are undoubtedly leaders in their special fields, but the majority have never made mark enough in anything to be entrusted with a scheme for training the greatest asset Canada has, and there is not one business man in the whole body.

Toronto University is run by clergymen, doctors, lawyers and musicians. The whole aim is to lay out a course to train men for these professions and the country is overrun with them.

Canada has developed in the last few years from a colony to a nation—to be reckoned with in the commercial affairs of the world. We must not only hold a place, but we must aim to lead. We can only lead by thoroughly educating our young men in the most practical way. We are now far behind many other countries in this respect, and it is only by the natural intelligence of our people that we have progressed so far.

While a comparison is made with McGill College, it is not for the purpose of exciting unfriendly rivalry, but to show Ontario, from an example at her doors, what progress is being made. McGill is far in advance of Toronto, but she has still much to do in some respects before she comes into the company of some of the United States and European colleges. But with her great resources and her broad-minded, able Principal she should soon hold her own with any college in the world.

The time will come before long when the interests of Canada will demand an understanding between all our colleges to prevent a certain amount of overlapping and for doing more effective work.

A PLAN THAT FAILED.

THE profit-sharing system of doing business has many advocates, as indeed have all plans of conducting business in which employers and employes have a financial interest in the firm or company. But, perhaps, of them all, that wherein the stock is given to the employes or where the year's profits are shared and used to buy their stock in the company has the least chance of becomming successful. The object of all such methods, apart from the philanthropic motives which may guide some employers, is to inspire in the workers that same desire for the company's success as exists in the minds and hearts of the proprietors. But this result is not likely to be assured where the stock is given instead of being sold to the employe. In the latter case he has a direct interest in getting value for money invested, just as has the employer.

A case where the profit-sharing system failed was that of The American Window Glass Co., of Pittsburg. In 1900, 5,000 shares of the common stock of the company were to be given to the workmen's association. The men did not have to invest any money. They were to have representation on the board, and the stock was to be paid for out of the dividends. It was turned over to the workmen in this way at $30 a share. In return for this the workmen were to give nothing but their full attention to the work, with a view to furthering the business of the company.

In spite of this, out of the 1,700 pots which was the capacity of the company's factories, only 1,000 were operated, owing to the fact that the workmen did not supply skilled labor, and the company had to withdraw its profit-sharing plan.

THE DEPRESSION IN GERMANY.

IT is practically impossible to sustain an industry under the strain of unnatural conditions. A better illustration of this would hardly be found than is given by the condition of the iron and steel industries of Germany to-day, as evidenced by the following from Kuhlow's German Trade Review, Berlin :

In the Iron and Steel Trades of Germany matters up to now have continued to progress from bad to worse, and a feeling of despondence largely prevails amongst those best competent to judge as to prospects in the near future. The more sanguine look for a change later on, but few expect that any real improvement will be reached until pools and syndicates are done away with and prices come to be regulated in a natural way. At present German consumers are paying artifically high prices, while artifically low ones are quoted for export, and a striking instance of the extravagancies which this price policy has reached was afforded in a statement just made at a meeting of Rhine-Westphalian Boiler works. A resolution was adopted by these manufacturers asserting that the existing difficult plight of their industry was intensified by the fact that the export price of German plates and pipes for boilers is so low that they can be shipped abroad, reimported, and transported into the heart of Germany at a lower cost than by purchasing them direct from the rolling mills.

The latest reports from Rhenish-Westphalia represent the feeling in the trade as one of growing uncertainty. The home consumption of crude iron is diminishing, and sales are made under harder conditions. The wire trade is described as suffering especially from low prices at home and growing competition abroad. On the other hand, building operations have kept up well during the autumn, and this has created a steady demand for girders and other structural forms of steel. Even in this department, however, dealers are now slow to to place orders, as they expect lower prices.

German iron and steel manufacturers, in their desire to prevent the demoralization threatened their industries by the depression prevailing in that country during the last year or two, organized a large syndicate or pool to control prices on the home market and for export. They argued that if they could export a large enough proportion of their production they could maintain prices at home, so they contributed to a fund out of which a liberal bonus is paid for every ton of their lines exported. The result has been as manifested in the extract above, prices were raised at home and lowered for export. Owing to the depression, the demand for iron and steel materials became reduced as prices advanced. Then a large proportion had to be exported, so prices were again lowered, and an attempt to recoup this loss was made by further enhancement of values on the home market. The ultimate result is the absurd conditions above noted, and Kuhlow's Trade Review, an organ of the manufacturing interests of the country, now says that pools and syndicates must be done away with.

HAVE ATTENDED TO BUSINESS.

SPECULATION is altogether too rife among business men, especially in the cities, throughout Canada to-day. It is, therefore, refreshing to read the following statement from Mr. Wm. Murray, Vancouver, manager of the Canadian Bank of Commerce :

Vancouver to day possesses an air of solidity it never had before. Men of sound business principles are at the head of the business institutions of the city. The wholesale as well as the retail trade of the city is in exceptionally fine shape. Business men during the past twelve months have been attending strictly to the management of their various enterprises, and leaving outside speculation severely alone, with a result which has been greatly beneficial to them individually, and also to the community. Real estate shows a healthy condition and while many turnovers have been made within the past eight months it is most gratifying to note that property purchasers have proved builders, and not much land is moving for the purposes of speculation.

Vancouver is to be congratulated, in the first place that its business men have realized that they will make the best permanent progress by concentrating their energies on their own business enterprises; and in the second place that the land of the city is going into the hands of progressive business men rather than into the grip of those who would hold it for the rise in values due to, the improvement of adjacent properties.

BANK BRANCH WANTED

"HARDWARE AND METAL would do a good turn to many business men," said a wide-awake traveller the other day, "if it would suggest to some of those new banks the advisability of establishing a branch bank at Cardinal, Ont. The chartered bank nearest to that town is at Pre-cott, 12 miles away to the west. The nearest on the east is Morrisburg, 15 miles distant, though there is a private bank at Iroquois. On the north there is none nearer than Kemptville, too far away to be considered. You can readily see that as Cardinal is a progressive village, as The Edwardsburg Starch Co has a large pay-roll, and as there is an excellent farming country about the place, that there is abundant room for a branch bank there."

A study of these conditions will readily convince one that there is much truth in the arguments advanced by the "Knight of the Grip." In any case the matter is worthy of the attention of some of our progressive financial institutions.

BRIGHT PROSPECTS FOR BICYCLES.

THE future of the bicycle trade can now safely be said to be assured as the prospects were never brighter than they appear to-day.

It is interesting to know that this is not the booming of a fad, but the demand of a staple article, as it is now an acknowledged fact that the bicycle is not only a necessity and a great convenience, but a healthy pastime. This is thoroughly realized in Canada, England and Australia at the present time judging from the number of orders that are being taken by the leading firm of bicycle manufactures in Canada and from the busy appearance of their factory.

The falling off in the bicycle' business was principally attributed to the introducing of various outside amusements, whereas, perhaps, if the truth were known, the chief reason for this was the fact that manufacturers of bicycles and bicycle sundries discontinued advertising.

It is quite evident that they realize this fact now judging from the attractive advertising that is being done throughout Canada at the present time, and we understand that the policy of advertising in the different forms will be followed out quite extensively during the coming season. Agents and dealers are beginning to realize the benefits to be derived therefrom as indicated by the orders already received for bicycles and bicycle sundries. Added to this the fact that the business is now in the hands of respontible dealers assures a bright outlook for the coming season.

Hardware men throughout the country are beginning to realize that bicycle sundries are in their line and a well assorted stock is almost a necessity and will prove profitable.

We believe the coming season will see a return of the good old wheeling days, and that we will see strings of bicycles on the roads ridden by pleasure and health-seekers. This means that the owners of wheels will soon be looking them out and giving them a general overhauling, when, perhaps, a new pair of pedals, grips or handlebars will be needed and to-day they will look for these articles at the hardware store.

COMMENT ON CURRENT TOPICS

DOCTORS in Toronto are prescribing anthracite coal for some of their patients, claiming that bituminous is injurious to their health. This is surely a new departure in medical practice.

* * *

The British flag was hauled down the other day by the Board of Governors of the Cork Lunatic Asylum. It is to be hoped the act will not be taken seriously by the British Government. One can never tell what impulse will lead people in asylums to do.

* * *

Toronto is still wrestling with the smoke nuisance question, and a few days ago the Board of Control passed over to the tender mercies of the Legislation and Reception Committee the by-law which is designed to govern the nuisance. Whether it will, like its predecessors, go up in smoke, remains to be seen.

* * *

It beats everything the way ambitious towns in Ontario are scrambling after beet sugar factories.

* * *

Toronto's new City Council is still inflated with the gas-ownership idea.

* * *

In New York beans are being used as fuel and in Toronto as a substitute for potatoes. Varied, evidently, is the utility of the white bean.

* * *

Coal is King and millions of people on this democratic continent are elbowing each other to make obeisance to him.

* * *

In coal we have a subject for reciprocity, as well as an article for fuel.

* * *

The public have not yet been enticed back to the speculative stock market. It is fortunate. He who ventures into the speculative market is always in danger of being tossed by the "bulls" or squeezed by the "bears."

* * *

Canada's trade is growing by leaps and bounds, and the leaps and bounds do not appear to be overstrained, either.

* * *

At the annual banquet of the Brantford Board of Trade the other night, Hon. J. I. Tarte declared that Canada had reached a solemn stage in her history. She has, and Mr. Tarte is a living example. The Premier took his speeches seriously and compelled him to resign his portfolio in the Cabinet.

* * *

Hon. Joseph Chamberlain, whose presence in South Africa is creating so much interest, was once in the screw-manufacturing business, which possibly accounts for the fact that he is able to "screw up" so much courage.

* * *

Marconi would save a great deal of time in crossing and recrossing the Atlantic if he could utilize his wireless system for transportation purposes.

* * *

The duty on lead is naturally a weighty subject.

* * *

The physical health of Alfred Beit, the South-African millionaire, appears to be the very antithesis of his financial condition. Possibly he would be glad to exchange with those of us with whom the conditions are the reverse.

* * *

The two political parties in Ontario have lately so effectually painted each other black that the independent spectator must have arrived at the conclusion that there are two of a kind. There is one thing, however, for the good name of the country: Neither of them are as black as they are painted.

* * *

A letter to The London Times, says that the movement for taking settlers from Great Britain to Canada is assuming national proportions. This is a matter for congratulation. Hitherto the "national proportions" have been of the opposite description.

* * *

Lord Charles Beresford, who is now on a visit to this continent, has established his reputation as a good fighter; but he talks too much to be considered a good talker.

* * *

Sweden is to have a match combination, a syndicate of five companies having purchased the majority of the shares in The Vulcan Company, the output of which has amounted to about one-fourth of the total production of matches in Sweden. We may now confidently look for less friction, and, consequently, greater safety.

* * *

One of the immigration commissioners is of the opinion that the export of barley to Great Britain will prove profitable. Ten or twelve years ago the whole country thought that. The United States had put a prohibitory duty on Canadian barley, and our export trade to that country shrank from important to insignificant proportions. We were to be recompensed by growing two-rowed barley and selling it in Great Britain. But our attempts proved abortive, and to some extent, at least, on account of the penchant of too many shippers to mix the two-rowed with other descriptions of barley. And to-day our export barley trade is 95 per cent. smaller than it was when the McKinley tariff was raised up against it. We are not, however, scarcely as bad as those without hope, for last year we sent 345,936 bushels of barley to Great Britain, whereas 11 years ago the quantity was only 27,132 bushels. But, then, 11 years ago we sent nearly 10,000,000 bushels to the United States, while the sum total of last year was but 17,161 bushels.

* * *

Another Conservative Senator has passed away. Five years ago the Government supporters in the Senate were in what appeared to be a hopeless minority; now they have a substantial "working majority." Death seems to be more partial to the Liberal Government at Ottawa than the electors are to the Conservative Opposition in Ontario.

* * *

With coal extraordinarily high in price, and with the temperature unpleasantly low, one has good reason for believing that King Coal and Jack Frost are working in harmony to the discomfort of consumers.

* * *

The price of gas has been reduced 10c. per 1,000 feet in Toronto. But ways and

means have yet to be devised to reduce the cost of aldermanic gas in the "Queen City."

* * *

The Monroe Doctrine, interest in which is again being revived on account of the Venezuelan difficulty, was 79 years old last month. Like nearly all doctrines, political as well as religious, it has undergone some fundamental changes as a result of the machinations of heterodox politicians. "With the existing colonies or dependencies of any European Power, we have not interferred and shall not interfere," declared one of the clauses in President Monroe's message enunciating the Doctrine. The clauses which were designed to restrain the United States are no longer allowed to do duty; it is only those clauses that were designed to keep a restraint on the nations of Europe that are now considered orthodox.

* * *

Canning's name has often been associated with the Monroe Doctrine. It is true that he suggested to the United States Ambassador the principles which were afterwards laid down in the famous message of President Monroe. But his expressed idea was that Great Britain and the United States should jointly promulgate the Doctrine that any attempt of the four European continental Powers, composing the "Holy Alliance," to destroy the independence of the new South-American Republics, would be considered a cause for united action on the part of the two countries. In President Monroe's Cabinet there was at first a decided disposition to fall in with the views of Canning. The views of Jefferson and Madison, both of whom had previously occupied the presidential chair, were equally favorable. But John Quincy Adams, Secretary of State in Monroe's Cabinet, was strongly opposed to co-operation with Great Britain and finally persuaded a majority of his confreres to adopt his view. And the message, which Monroe afterwards submitted to Congress was actually drawn up by Mr Adams.

There is nothing surprising in the good results shown in the last report of E. W Gillett Co., Limited. Baking powder and yeast ought to raise a good business.

HOCKEY GAMES IN MONTREAL.

Lewis Bros. & Co.'s hockey team defeated the G.N.W. and C.P.R. team by a score of 5 to 1 on Monday night.

The following is a result of the games played by The Canada Paint Co. so far this season: Dominion Button Co., draw, 2—2; Union Bank, draw, 4—4; Northern Electric Co., 2—1 in favor of The Canada Paint Co. They now lead the manufacturers' league.

Just as good as the S. W. Paints

We make just as good varnishes as we do paints. Like our paints, they are just as good for each purpose as can be made.

THE SHERWIN-WILLIAMS VARNISHES

can be depended upon to give the very best results. They are right—always.

We use only high-grade materials—the materials that tend to produce durability.

We employ the most approved methods of manufacture—the methods that bring easy working, proper flowing, and drying qualities.

We give minute attention to detail. It is the careful aging and careful watching of the small details which turn out a varnish always the same—an article that will always give good results.

We are conducting our varnish business on the same basis that proved so successful in our paint industry, offering for each use a varnish which we are satisfied is best suited for that use.

If you believe in good varnishes—varnishes that are good to sell and good to use, write to-day for prices and further information.

CATALOGUES, BOOKLETS, ETC.

OUR ERROR.

WE are sorry to notice that last week when refering to catalogue "B," issued by the Taylor-Forbes Co., Guelph, Ont., we spoke of it as a "trade calendar." As this catalogue covers many lines that hardwaremen are particularly interested in we rectify the error so that the trade may not neglect to secure a copy of such a usefull work.

EXPANSION AND TOGGLE BOLTS.

The Seward and Romsine Manufacturing Co., Philadelphia, Pa., have issued a skeleton catalogue for 1903, giving a brief but well illustrated outline of the patent single and double expansion and toggle bolts which they are placing on the market this year. The reputation of the lines made by this firm, bolts, stay drills, cap and bonnet nuts, special brass and iron bolts of all kinds, is so high and so well established that the trade, to keep in touch with this up-to-date line of goods, will find it advisable to write for a copy of this catalogue, which will be sent to all readers of HARDWARE and METAL.

ACTINOLITE CEMENT ROOFING.

There is no test of quality like the test of time. There is, therefore, strong argument in the claim that as Actinolite cement roofs have stood the strain of Canada's cold winters and hot summers for over 20 years, and has necessitated no repairs in that time, the article must be particularly valuable for this purpose. One of the neatest booklets received by HARDWARE AND METAL for many weeks was sent to us this week by Joseph James, Actinolite, Ont., manufacturer of the product. This booklet gives full information regarding the nature of and the uses to which this material can be put, and also contains several letters from parties who have used it and commend it most [illegible]ously. The Paterson Manufacturing Co. are agents for this material in Toronto, and A. McArthur & Co. for it in Montreal. Readers of HARDWARE AND METAL can get these booklets on application.

AMUSEMENT STAMPS IN WINDSOR

THE Windsor, Ont., branch of the Retail Merchants' Association of Canada held their regular monthly meeting in their rooms, 16 Opera Block, on January 15. There was a large attendance, every line of business in the Border City being represented.

The principal topic of discussion was the talking off the shorts of the Association to have the by-law regarding the use of trading stamps enforced. The by-law, which is a verbatum copy of the Toronto by-law, was passed by the city council in June last, at which time The Dominion Trading Stamp Company was doing a rushing business in Windsor. Although the by-law did not come into force until three months after the date of its passage, the above-named company pulled stakes and was out of the city within a week.

Soon after The Trading Stamp Company quit here, a concern, which flourishes in Detroit, called The Amusement Stamp Company, introduced their business in Windsor. This scheme is worked on precisely the same lines as the trading stamps, with the addition of the privilege of buying ferryboat tickets and admission to the theatres and cheap shows in Detroit with the stamps.

A firm of grocers were induced to handle these stamps and resigned from membership in the Association for that purpose. War has been waged for the last three months against this firm, but through the apathy and opposition of the police department, the Association, up till now, have been unable to have the by-law enforced against this firm. It came out at the meeting that the city solicitor had given an opinion that the by-law was defective and would not reach the firm, they having resorted to a subterfuge in the shape of a stamped announcement on the books containing the stamps that they would redeem them in cash at their store.

Some of the members at the meeting wanted to let the matter drop, but Secretary Davis, of the Windsor branch, who is 2nd vice-president of the Association, said "No. I am a Briton and consequently a fighter, and this thing is going to be fought out if it takes all summer," and so the merry war goes on.

The committee appointed at the December meeting to arrange for the annual At Home, asked for further time to report, which was granted.

Hon. President Geo. B. Nairn, president of the Grocers' Section, called for a short session of the grocers after the adjournment of the general meeting, which was held, and some important business transacted.

The plumbers and hardware dealers expect to have a section formed during the present month, and the druggists will nicely follow in the near future.

ALABASTINE.

ALABASTINE has been on the market for more than twenty years, and is known to be reliable. Is thoroughly advertised, and in demand. To sell anything else for coating walls, it must necessarily be on the recommendation that it is the same thing, ***or just as good as Alabastine.***

ALABASTINE is ready for use by the addition of cold water, made so by the inventor, Mr. M. B. Church, who was the first to produce a cold-water preparation that is thoroughly practical, that has superseded all hot-water mixtures and forced other manufacturers to ***undertake*** the use of the cold water process, which process is protected by ***Canadian Letters Patent.***

ALABASTINE hardens with age, and repeated coats may be added from time to time without the necessity of removing old coats when desired to renew. This effects a great saving to the user.

ALABASTINE is made in Canada, by Canadian labor, and from rock taken from Canadian mines. The trade supplied by Wholesale Hardware and Paint Dealers. Also by

MACHINERY

THE TOOL-MAKER.

WHAT shop has not had their troubles with the incompetence and sloven methods of the tool-maker? This class of blacksmiths never seem to realize or think that they "burn money" when they overheat a piece of steel that costs time, patience and money to finish before being hardened, and with "That's good enough," plunge a tool in the water that is black on one side and a bright yellow on the other, and wonder why it water-cracks when it is taken out. If such smiths as this had to pay for every piece spoiled in this way I think it would finally teach them to be more careful in their methods and make better workmen of them, writes Thomas Beasley in Shop Talks.

The trouble with most tool-smiths is that they hurry their heats along too fast, not allowing time for their steel to get thoroughly heated through. This is to be avoided at all times, as the centre of any piece of tool steel either to be forged or hardened, should be relatively the same heat all the way through; then the strain is the same inside and out and the danger of water-cracks in hardening is reduced to the lowest point.

To illustrate this point, here is what I saw happen to a tool-smith once. He was hardening a large pair of forging machine dies and had heated one and dipped it into a barrel of water and, on taking it out, it cracked all to pieces. Naturally he was surprised and asked my opinion about it, and I found, on examination, that he had taken it out only partly cooled, and, of course, the inside began to expand faster than the heat travelled, consequently something had to give.

THE CHARCOAL IRON INDUSTRY.

Few branches of the iron trade have shown a greater tenacity of life than that which deals with the manufacture of charcoal iron, says an English trade paper. It is not 100 years since more than one-half of all the iron produced in the world was made with this fuel. On the American continent, mainly as a result of the wealth of forest lands still available, and the vast range of demand for a multiplicity of requirements, some 400,000 tons of charcoal iron are still annually produced, including Canada and the United States. On the European Continent the principal charcoal iron producer is Russia, which, until less than a quarter of a century ago, had a very trifling iron output from mineral fuel, but now produces mainly coke pig iron. Britain's contribution to the world's charcoal iron output is limited to the output of one furnace, worked on the West Coast by Harrison, Ainslie & Co. Germany does not produce more than 8,000 tons of charcoal iron annually, while France nearly doubles this quantity, having turned out over 7,000 tons in the first half of 1902. Swedish pig iron continues to be mainly produced with charcoal fuel, which is essential to the maintenance of that specially high quality at which Swedish manufacturers aim, and without which their iron would have but little chance in competition with the much cheaper brands of Continental Europe and the United States.

MACHINERY AND ELECTRICAL NOTES.

CHIEF ROE, of the London, Ont., fire department, has been instructed to get estimates of the cost of a steam engine, a chemical engine and an extension ladder.

President M. C. Burr and Director T. N. Minnie, of The Centrifugal Windmill Co., Limited, were in Toronto last week buying machinery for their factory.

The boiler and two carloads of electrical machinery have arrived for The Macdonald Engineering Co., Owen Sound, Ont., to supply power for their new elevator.

The Canadian Fire Engine Co., of London, Ont., on January 15 completed the shipment of three steam fire engines under contract with Trenton and Merrickville, Ont., and Pugwash, N.S.

Shannon & Co.'s sawmill, located about 25 miles north of Prince Albert, Man., was burned to the ground last week and considerable machinery was destroyed. This will be renewed at once.

The Truro, N.S., Foundry and Machine Co. shipped one carload of boiler and fittings from The Mexican and Nova Scotia Gold Mining Co. This company is making rapid progress under the able management of George W. Stuart.

SIGNAL FOR RAILWAY CROSSINGS.

An automatic signal lantern has been introduced by the Leipzig, Germany, street railway companies, which is designed to prevent accidents at crossings. The apparatus consists of two boxes arranged one above the other, each having two sides fitted with red, and the other two with green glass, the red being above the green. Cars on one line cause the incandescent lamps in the upper box to glow – cars on the other line, the lower one. This causes, on the approach of a car, owing to the arrangement of the glass in the box a green light to appear on one line, which indicates free passage, and a red light on the second line signals "stop." This does away with the necessity of having the conductor run ahead to inspect the crossing and signal to the motorman when the line is clear. Signals are also visible in the day time, as reflectors shut out the light of the sun, and the apparatus is well lighted from the inside.

The town of Listowel, Ont., will apply for legislation at the forthcoming session of the House to enable it to acquire the plant of The Listowel Gas and Electric Light Company, and to raise money on five-year debentures to pay for it. The proposal has been ratified by a by-law recently submitted to the ratepayers.

MAXWELL MOWER.
Steel Low Wheel

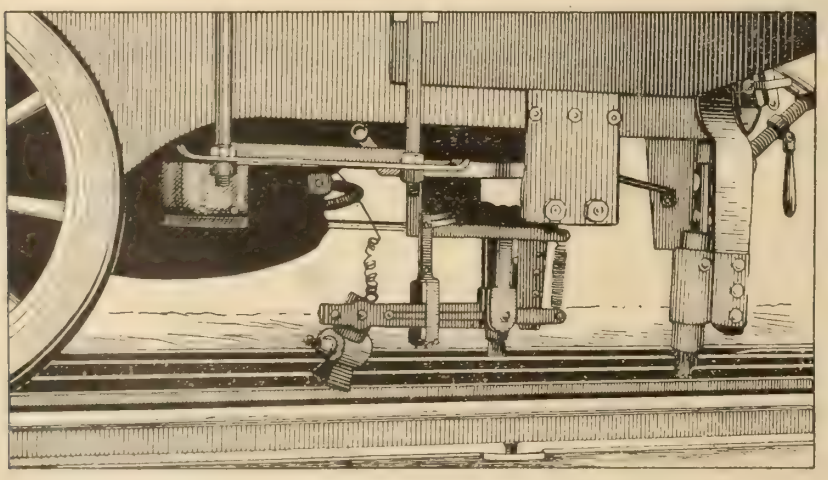
NEW SAFETY DEVICE FOR RAILWAYS.

By F. H. Mason, United States Consul at Berlin.

THE American newspapers of November 13 contain a press telegram announcing that on the day previous a new electral device for preventing collision between railway trains has been tested with entire success in the presence of a board of experts on one of the State lines near Frankfort. Since any improvement which can effectively reduce the danger of accident in railway travel appeals so directly to popular interest, it has been deemed timely to submit a brief account of this new device, which seems to mark an important advance step in the solution of a difficult and perplexing problem.

It is the joint invention of Hubert Pfirmann and Max Wendorf, and its construction and method of operation are as follows: Midway between the rails is laid a light third rail of the ordinary T pattern, the joints of which are so connected as to form a continuous conductor.

Midway under the forward part of the engine is hung the working instrument, an electrical apparatus inclosed in a square case or jacket occupying a cubic foot of space. The instrument is connected with a contact shoe (see illustration), which slides along the third rail and by wires



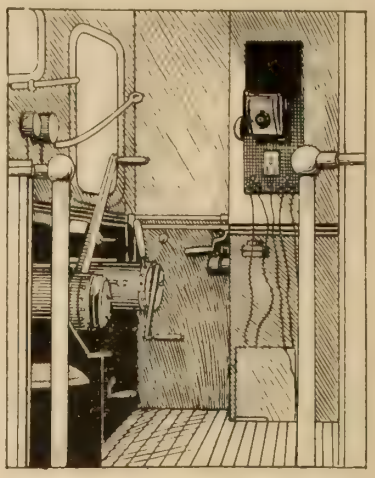
Contact Shoe on Third Rail

with a telephone and electric alarm bell in the cab of the engine-driver, and a red incandescent lamp which is lighted by the same impulse which rouses the alarm bell into action. A further improvement of the device sets the electric brakes on the engine or entire train simultaneously with the alarm signal which sounds the bell and lights the lamp. The apparatus is so adjusted and arranged that the engineer can at any moment, by touching a lever, satisfy himself that it is in full working condition.

The tests on November 12 were conducted on the main line from Frankfort to Hanau, between the stations Sachsenhausen and Goldstein, and a translation of the official report will illustrate concisely the working of the apparatus. Two locomotives, numbered respectively 290 and 1420, had been equipped with the new device and the experiments proceeded as follows: Engine 290, drawing a special train and approaching Sachsenhausen at full speed, received the danger signal and came to a full stop; the driver of 290 then asked by telephone the cause of the signal and received from the keeper of a grade crossing, half a mile in front, word that a wagon had broken down in crossing the track and obstructed the line. After ten minutes' wait, the engineer of 290 received word by telephone that the obstruction had been cleared away and thereupon resumed his trip.

A mile farther on, the signal on 290 again sounded, and the driver was informed, by telephone as before, that the semaphore round a curve and more than half a mile distant was set at "halt." Thereupon engine 290 slowed down and proceeded cautiously, sounding its whistle at short intervals, the telephone bell in the drivers' cab ringing continuously until the curve was rounded, when the ringing ceased, notifying the engineer that the semaphore had changed to "track clear." Thereupon 290 resumed full speed.

In the tests to prevent collision, engine 1420 came up rapidly from behind and on the same track as 290, which had slowed down and was proceeding cautiously in consequence of reported danger in front. The moment that 1420 came within 1,000 meters (1,093 yards) of 290, the signal on both engines began to ring and their red lights to glow. Thereupon 1420 halted, the driver inquired of 290 in front the cause of the alarm, and a complete understanding between the two trains was immediately established. An important point in this connection is that in practice



Telephone Alarm Bell and Light in Cab.

the same warning signal is sounded upon every engine equipped with the apparatus which is on the same track and within the prescribed radius—a kilometer or a mile, as the case may be—from the engine and train which cause the obstruction. If a semaphore be falsely set at safety, the train may run past it into a block in which another engine is halted or moving with perfect security that warning will be given in ample time to prevent a collision under any and all conditions of darkness, fog, storm, or mistaken instructions. The invention has other minor points of usefulness, but the foregoing will be sufficient to indicate the general method of its operation and the measure of its efficiency. In effect, it puts the engine driver of every train into instantaneous touch with other trains, switchmen, and station and crossing keepers in his neighborhood and keeps ever before his eye and ear an automatic and infallible signal which springs into activity the moment that his locomotive, whether running forward or backward, comes within the radius of danger from collision. What ghastly wrecks might be spared, what precious lives saved, what a sense of added security given to multitudes of railway travelers, what delays avoided under certain atmospheric conditions, by a device which puts the man behind the headlight, rushing on through night and fog and storm, into instant and unerring touch with the train next in front and with those whose duty it

is to watch and guard the safety of the line! That the present invention is yet perfected and fully adapted to practical use is not to be prematurely assumed; but, in the judgment of those whose opinions are entitled to respect, the way has been pointed out and the germ of a new effective system discovered.

The German Government has directed that a section of track be equipped with the apparatus for careful, practical experiments, and it is reported that the Government of Russia has obtained license to test it in actual service on its new military lines now under construction in Siberia.

A HARDWARE MERCHANT MARRIED.

On Tuesday, last week, Harry J. L. Brathwaite, the genial hardwareman, of Kearney, Ont., was united in marriage to Miss Grace W. Bingham, daughter of Wesley Bingham, Manning avenue, Toronto. After the ceremony an informal reception was held, after which over 50 relatives and intimate friends sat down to a daintily prepared breakfast. Mr. and Mrs. Brathwaite left in time to take the 10 o'clock train to Montreal, after which they will go to their new home in Kearney. HARDWARE and METAL joins with the many friends of Mr. Brathwaite in wishing him and his bride many enjoyable and prosperous years together.

A $50,000 BLAZE.

A fire that resulted in damage to the amount of $50,000 broke out shortly after one o'clock on Monday morning in the cut nail and horse nail factory of Peck, Benny & Co., 61 Mill street, Montreal. The loss is entirely covered by insurance.

So far had the fire progressed when discovered that the watchman, who had been in the engine-room making ready for the day's work, saw first the flames bursting forth from the building. In a short time the entire fire brigade of the city was on the scene, and for an hour and a half worked hard before the fire was under control. Between the heavy smoke which at times made it almost impossible to see, and the very cold weather, it being then about 15 degrees below zero, great difficulty was experienced.

It was out of the question to save the nail mill, but the rolling mill and other large plants in the vicinity, among them the Livingstone Linseed Oil Works, were saved by the efforts of the firemen, assisted by a heavy fire wall on the west of the nail factory.

The insurance on the building, plant and stock was divided among the following companies: Aetna, $3,000; Alliance, $2,000; Commercial Union, $2,500; Hartford, $2,500; Liverpool and L. and G., $5,000; London and Lancashire, $2,500; London Assurance, $3,000; North America, $2,000; North British and Mercantile, $2,000; Northern, $2,000; Norwich Union, $2,000; Phoenix of Brooklyn, $3,000; Phoenix of London, $4,000; Quebec, $1,500; Royal, $7,500; Scottish Union and National, $2,500; Western, $3,000.

TO BOOM PORT SIMPSON.

A syndicate of Vancouver and Victoria people are organizing to boom Port Simpson, B. C., in order to make a land speculation profitable to them. The have secured an option on 176 acres of land fronting for about quarter of a mile on the harbor at Port Simpson, and they claim that either the Grand Trunk Pacific or the Canadian Northern will make that place their terminus. They, therefore, propose to sub-divide the land they now control into 1,100 building lots, which they will sell at $100 each. The company will, under the style of the Port Simpson Land & Improvement Co., advertise the land in all parts of Canada.

D. W. Flack, general merchant, Swan Lake, N.W.T., has sold out.

PRATT & WHITNEY'S Standard Taps and Dies.

No. 4 Set—Lengths of Die Stock, 48-in. Six Dies U. S. Standard Cutting 7/8-in., 1-in., 1 1/8-in., 1 1/4-in., 1 3/8-in., 1 1/2-in. Other sizes carried in stock. We are sole Canadian Agents for these tools, and will be pleased to furnish catalogues and prices on application.

Window and Interior Displays

Timely Hints and Suggestions.

WE WANT YOUR ASSISTANCE.

IN order to make this department a decided success and to enable us to give the greatest assistance, we want you to send us photographs of any design you have adopted in your windows or interior which you think worthy of notice. These we will publish and criticize. If the design is of special construction, state how it was built, the foundation used, etc.

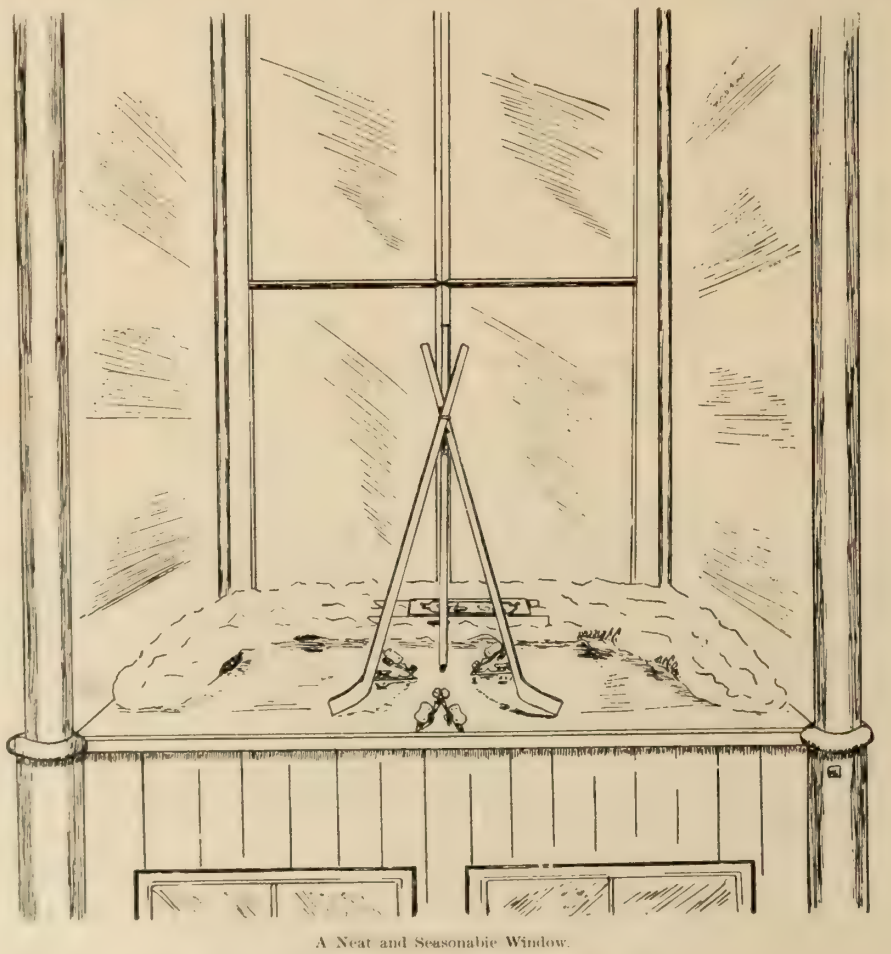
For some time at least we are prepared, where desired, to pay the necessary expenses incurred by the merchant in the taking of any picture which we think suitable for publication.

By the use of illustrations in this department every merchant will be benefitted, and suggestions and photographs of window dressing or store interiors will be credited to the sender.

Lend us your assistance, and not only yourselves but your brother merchants all over Canada will appreciate your trouble.

TO PHOTOGRAPH THE WINDOW.

Perhaps many of our readers do not know how to photograph a window, and, having tried, have not obtained a picture worth sending. In taking photographs it is well to remember that it is extremely difficult to take a picture by day, as the light being better outside than in the window causes reflections on the glass. Night is the best time. If you must have the picture by day you will probably have to obtain the services of a couple of boys to hold a screen behind the camera in order to shut out the buildings across the street. This is not so difficult as it would appear. The camera will not be more than the width of the sidewalk, or 8 or 10 ft. away from the window and a screen 8 or 10 ft. in height, held close behind the camera, should obscure the buildings on the opposite side of the street. This screen can be made of dark bunting or cheap cloth of any kind, fastened to two rods. The early morning just before sunrise is the best time for daylight pictures, as the light is clear and the annoyance of people walking on the street is avoided. Remember that in any case the window must be lighter than the exterior.



A Neat and Seasonable Window.

In taking pictures by night have your window as well lighted as possible, but have the lights themselves concealed from the street. If you have a good lens, a half a minute's exposure may be sufficient, but the length of exposure depends entirety on the light and the quality of lens. The size of the diaphragm also counts, as the larger it is the more light is admitted and the shorter the exposure necessary, but a smaller diaphragm gives sharpness to the picture. In a photo by night the passing of people between the camera and the window does not interfere with the picture.

In photographing interiors, all that is necessary to remember is that you must not face a window if it can be avoided, as the halation blurs the surrounding space. It is far more satisfactory to use flash lights for this purpose. There are flashes on the market that cost only 25c. for seven, and a failure with them has seldom been seen. Instructions for flash-light pictures will be given to anyone desiring them. If a merchant is not clear on any point in photographing windows or interiors, we will be pleased to supply him with any information he desires.

With photographs send a short description of the window or interior to assist us in determing how the display was constructed or the effect aimed at.

THIS WEEK'S ILLUSTRATION.

The striking feature of the design given in the accompanying illustration is the small number of articles shown. The floor of the window is a mirror, and around the sides is piled cotton batting to represent snow. A mirror of any size may be used and the edges concealed by the batting. In the edges of the batting can be placed sod in small pieces, assisting the effect of the edge of a pond. Although the window is a hockey window the sleigh at the back relieves a possible monotony in the stretch of white.

WINNIPEG IMPLEMENT BANQUET.

ONE of the most successful banquets ever held was given by the Winnipeg Implement Men's Association on Monday evening, last week. Among those present were: H. W. Hutchinson, of The Fairchild Co.; J. E. Ruby, of The Frost & Wood Co., Limited; Geo. Forsythe, of The Massey-Harris Co., Limited; J. J. Buggie, Canadian Moline Plough Co.; F. W. Peters, general freight agent of the C.P.R.; L.H. Hartshorn, American Abell Co.; A. E. Kennaston, American Abell Co.; A. C. McRae, McRae Carriage Co.; G. W. Erb, Waterous Engine Co.; J. D. Balfour, Balfour Implement Co.; A. M. Stewart, Stewart & Metcalfe; A. E. Mott, Cockshutt Plow Co.; R. McKenzie, McLaughlin Carriage Co.; J. G. Norris, manager of The Garr-Scott Co.; R. H. Potter, Champion Harvester Co.; J. B. McCutcheon, Nichol & Sheppard; H. Donaldson, McCormick Harvesting Machine Co.; A. G. Watson, of The Watson Co.

Toastmaster J. E. Ruby proposed the first toast, "The King," which was received by singing the National Anthem.

"Our Country" was proposed and responded to by T. L. Metcalfe, the solicitor for the Association. In a happy speech he referred to the conditions of the country, which made him happy that he was a British subject and a Canadian, and particularly that he was a resident of Manitoba and of Winnipeg. The peace and prosperity of the country was great, and the feelings between Canada and the United States were of the most friendly nature. England and the United States had met in bloody war in the past, but in the future he was confident that they would march side by side for the advancement of Christianity, trade and commerce, and do lasting good in the world. He believed that in the near future there would be greater population west of the great lakes than in the east. Not that the east would not advance, but that the west would advance faster.

"The Implement Interests, 1883-1903," was responded to by H. W. Hutchinson. He said that it was just 20 years since he had arrived in Winnipeg, and that there had been many changes in the implement business since then. The limited amount of railway facilities, the sparseness of population and general conditions made competition very keen. Not only that, but there was jealousy and ill-feeling between the different firms. In the old days the only railways were from Emerson to Winnipeg, a main line west to Moosomin, and east to Port Arthur. In 1886 a line was built to Manitou, and from Regina to Prince Albert. The freight rates were very high, as much as $150 for a car of wagons, whereas now the rate was only $167. Following the boom many came west with only $100 to start farming, who were entirely unfit for the occupation. This meant that there was much valueless paper floating around, and the implement men got more than their share of it.

COMPARATIVE PRICES.

Mr. Hutchinson then went on to compare the prices on implements in 1883 and 1903. A 14-inch breaker in 1883 cost $26, to-day $20; an American plow cost $27, now $20; a Canadian plow cost $24, now $18; a farm wagon $110, now $90; a farm sleigh $50, now $27; a binder $350, now $150; a mower $105, now $45; rakes, $45, now $35, etc. He then explained that to-day the farmers of Manitoba and the Northwest were getting their implements at prices as cheap or cheaper than the farmers of Dakota. He estimated that the business done in farm implements in Manitoba and the Northwest for last year amounted to almost $15,000,000.

NEW HARDWARE FIRM.

H. A. Couse, of this town, and Andrew Rougvie, of Goderich, have associated themselves in partnership and have purchased the hardware business of E. M. Marshall, which the latter gentleman has carried on here in the Carter block on East Front street for some years past. The deal was completed yesterday and the new proprietors will take possession of the premises as soon as stock-taking is completed. Mr. Rougvie will arrive here from Goderich this week and will become a resident of Sarnia. The hardware business at present conducted by Mr. Couse on West Front street will be continued indefinitely in the store now occupied — Sarnia Observer, January 13.

"SUN" BRAND CEMENT.

The Sun Portland Cement Co., Limited, of Owen Sound, have been on the market with their "Sun" brand since October last, and it is said that this brand has already gained a good reputation for itself. The capacity of their plant for the coming season will be between 400 and 500 barrels per day. The company is under the management of Jas. A. Cline, formerly a hardware merchant and furniture manufacturer of Wingham.

Contrast!

"**Happy** is the Farmer who uses the **Paris Green** manufactured by The Canada Paint Company for he shall find comfort!"

. . . . .

"**Unhappy** is the Colorado Potato Bug which partakes of the Paris Green manufactured by the Canada Paint Company for he shall receive a speedy death!"

The Canada Paint Company Paris Green is manufactured from a formula which gives it the highest possible place as an insecticide. It is undoubtedly the best that can be made.

As we manufacture direct from the essential chemicals, we are able to guarantee a uniformly superior article, and always **in advance** of the Government Standard. Beware of imported greens. They are so unsatisfactory. Dealers should write The Canada Paint Company for handsome show card. It will be expressed free.

PAINT, OIL AND BRUSH TRADES

DEVELOPING THE PAINT TRADE.

THAT the paint trade can be develop[illegible] by close attention and progres[illegible] methods seems to be generally agreed to by the jobbers as well as by retailers who have given the matter some thought. A feature which contributes materially to such a possibility, is the general desire of mankind to have his property as attractive as his neighbors.

This has been illustrated by several ex[illegible]mples which have come under the notice of the Pennsylvania Railroad Company. The company have, in several instances, built a station house and residence com[illegible]bined for its agents in out of the way places. In each case the residences were painted a bright color, and it seems that the effect on the farmers living in the neighborhood, were so influenced by the appearance of the gay little station, that one by one, barns and farmhouses, from hillside to valley, will take on coatings just like their dignified and prim neigh bor. The appearance of the hamlets is entirely changed, so that pas-engers, in stead of having to look upon colorless, bleak, and sombre-hued roofs and weather-beaten houses, see neat little cottages surrounded by livid-colored outhouses.

Hardwaremen can carry out the same idea, first, by painting attractively their own stores and residences, then by influencing, in such ways as present themselves, their neighbors to follow their example. The result will be satisfaction for their neighbors, and increased results for them selves. It is by such methods as these that trade is expanded when it seems to have reached its natural limitations.

PAINT WORKS THREATENED.

A fire broke out on Tuesday morning in the premises of McColl Bros. & Co., var nish and oil manufacturers, etc., 533 St. Paul street, Montreal, and for a short time threatened to develop into a very disastrous one. A barge standing near a number of barrels of oil, exploded, and the fire extended to a large bale of wa-te. The fire commenced to spread rapidly, but on the arrival of the firemen upon the scene, it was soon placed under control. The damage was slight.

HERBERT HENRY ELLIS.

H. H. Ellis has received the appoint ment from The Canada Paint Company as traveller for the territory known as South and Northwestern Ontario. Mr. Ellis is a popular sal-sman, who under-stands the requirements of the hardware and paint trade thoroughly, and his friends are congratulating him heartily upon the fact of his being allied to The Canada Paint Company, whose manufac-tures are so widely known.

PAINT MEN IN MONTREAL.

H. A. Sherwin, president of The Sher-win-Williams Paint Company; W. H. Cot-tingham, general manager; J. C. Beard-slee, general superintendent, were in Montreal last week looking after the in-terests of the new factory to be built there. They are more than satisfied with the Canadian business, and expect it will double itself in the course of the next few years.

THE OWEN SOUND LINSEED MILL.

WITH a capital of $100,000 The Ontario Lindseed Oil Company, Limited, has been incorporated, to carry on the manufacture of linseed oil and oil cake in Owen Sound, Ont., the chartered headquarters of the firm, says The Owen Sound Times. The officials of the new organization follow: F. G. Sanderson, St. Marys, president and man-aging director; John Parker, Owen Sound, secretary-treasurer; Aaron Read, Owen Sound, and Isaac M. Levan, Wood-stock, directors. The company introduces two able men in Owen Sound's industrial undertakings in ex-Mayor Read and I. M. Levan, Principal of the Woodstock Colle-giate Institute. Lots 23 and 24 Water street west, on which property the mill will be located, has been surveyed. Chas. F. Elmes, sr., of The Charles F. Elmes Engineering Co., of Chicago, accompanied by George F. Gray, architect, of the same city, were in town on Tuesday. The former is recognized as the leading manu-facturer of linseed-oil machinery on the continent, while the latter makes a spe cialty of designing mills for the manufac-ture of this product. On Tuesday, these gentlemen, accompanied by F. G. Sander son, S. J. Parker, John Parker and A. Read, all directors of the company, went down to the property and spent some time there making measurements and sec-uring other information necessary for the experts. Mr. Elmes left for Toronto on Tuesday, and Mr. Gray for Chicago yes terday morning. J. Parker, secretary treasurer of the company, said to The Times to-day: "We are sparing no ex-pense to make the plant thoroughly mod ern. Our agreement with the corporation calls for buildings and plant to cost at least $25,000. Our buildings and plant will cost nearly twice that amount. It will be a six-press mill, capable of being enlarged to a twelve-press mill, or nearly as large as the Livingstone mill, which is a 15 press, and the largest in Canada. The buildings will be of stone, partly three and partly two-storeys high, and the oil tanks will be of steel." Mr. Parker added that the material would be hauled to the site as soon as practicable, and that the machinery would be ready to be installed as soon as the buildings were up. The plant will be ready for operations when the new seed arrives, and, in fact, will work on old seed if it can be ontained.

PAINT AND OIL NOTES.

The assets of John McArthur & Co., paint dealers, etc., have been sold.

Desmarais & Fils have registered as painters and contractors, Shawenegan Falls, Que.

The Toronto Union of Painters and Decorators' have notified the master painters of that city that on and after April 15 next, they will demand 35c. per hour, instead of 30c., the sum now paid them.

The paint manufacturers of Montreal, Toronto and Brantford have decided to offer no objections to a duty on lead and lead products, if their products, white lead, paints, etc., are included in the lines further protected.

PAINT AND OIL MARKETS.

TORONTO.

TURPENTINE and putty provide the features of the week. Putty has stiffened, the rise ranging from 10 to 15c. Turpentine also shows an ad-vance of 1c. in the week, and prophesies are freely made that prices will go mate rially higher. The demand is f airly strong, but not as active as jobbers an-ticipated. Linseed oil is firm, owing to the stiffness of seed on the home market, and the high prices of oil in England. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5 to $5.25; No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½.; No. 4, $3.50 to $3.75 in packages of 25-lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. pkgs.; genuine dry white lead in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.50; ditto, in kegs of 100 lb., $5;

Don't Stand in Your Own Light.

You are standing in your own light if you are not carrying a line of "Ark Brand" Paints.

"Ark Brand" is an absolutely honest paint that will not crack, chalk nor peel, and that invariably gives satisfaction. Here's what one of our representatives says about it.

MESSRS FRANCIS-FROST CO., Limited, Toronto, Ont.

DEAR SIRS,—After a fair trial of your "Ark Brand" Paints (as a practical painter), I take the opportunity to write you and give you my honest opinion on "Ark Brand" Paints. I have taken some trouble in testing the various brands of prepared paints, both Canadian and American, and I have no hesitation in saying that "Ark Brand" Paints have proved the most satisfactory of any of them, and I consider them the very best paints for any outside work on the market to-day, taking price and quality into consideration. As for your celebrated floor paint I can sell more of your brand and give better satisfaction than any other kind I have tried. You are at liberty to use my name in recommendation of your paints.

Yours Respectfully,

JAMES D. SMITH, Painter and Decorator.

The experience of his in handling "Ark Brand" can be yours if you will carry the line.

The Francis-Frost Co., Limited.
Toronto.

Canadian Distributing Agents for Grippin's Crack Filler.

THE ONLY ONE.

HOLLYWOOD PAINT

is the only manufactured paint on the market to-day that can be used when an architect's specifications call for lead and oil. That is why the dealers are selling such large quantities.

Write us a card for particulars.

The Hollywood Paint Co. Limited.

HAMILTON, CANADA.

RE-ACTING WASHER

The quickest acting, readiest selling, and most generally satisfactory Rotary Washing Machine on the market.

The only regret your customers will have after buying one of these excellent machines is that they did not know about it sooner.

They require them, you should stock them, we can supply them. Order each.

The Dowswell Manufacturing Co., Limited

HAMILTON.

W. L. HALDIMAND & SON, Montreal, Eastern Agents.

No. 1, in casks of 560 lb., $3.75; ditto, in kegs of 100 lb., $4.25.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6.25. Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In 5-gallon lots, 60 to 75c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb.; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c. per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.25 to $2.35; white, $2.35 to $2.45 per gal.; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8½c. per lb.; cabinet glue, in bbls., 12c.; emery glue, in bbls., 17½c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.10; bladders, in 100 lb. kegs, $2.25; bulk in barrels, $1.80; bulk, less than barrels, and up to 100 lb., $2.05; bladders, bulk or tins, less than 100 lb., $2.75.

PARIS GREEN.—Petroleum bbls., 14c. per lb.; arsenic kegs, 14½c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. packages, 16c.; ½-lb. packages, 18c.; 1-lb. tins, 16c.; ½-lb. 18c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 9 to 9½c. per lb., and 10 to 10½c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 86c.; 2 to 3 bbls., 85c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

GASOLINE AND BENZINE.—We quote as follows: Benzine, 19¼c. and gasoline, ordinary, 21¼c. and engine, 22¼c. f.o.b. Toronto.

MONTREAL.

Notwithstanding the uncertain movements of the travellers, in consequence of the storms and snow blockades, the paint grinders report a pretty brisk business for this time of the year. The week has been phenomenal for bookings and shipment of white lead. In fact, it is now almost on a par with coal, and the dealers find it difficult to make the supply go around, and to satisfy the demands of the trade calling out for white lead, and, like Oliver Twist, wanting more. Turpentine keeps firm, and with the supplies coming forward in an inactive and limited way, it would not surprise the trade if higher figures are asked. There has been a reduction of 10c. all around in the price of putty. Other branches feel healthier on the strength of the increasing spring demand. We quote:

GROUND WHITE LEAD.—Best brands, Government standard, $4.90 to $5.15; No. 1, $4.67½ to $4.77½; No. 2, $4.30 to $4.40; No. 3, $3.92½ to $4.02½; No. 4, $3.55 to $3.65 all f.o.b., Montreal. Terms, 4 months, or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—$5 in casks, and in kegs, $5.25.

DRY WHITE ZINC.—Pure dry, in casks, 6¼c.; in 100-lb. kegs, 6¾c. No. 1 zinc, in casks, 5¼c.; in 100-lb. kegs, 5¾c.

WHITE ZINC (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

PUTTY.—We quote: Bulk, in barrels, $1.80 per 100 lb.; bulk, in less quantity, $1.95; bladders, in barrels, $2.10; bladders, in 100 or 200-lb. kegs or boxes, $2.25; in tins, $2.20 to $2.50; in less than 100-lb. lots, $2.75 f.o.b., Montreal, Ottawa, Toronto, Hamilton, London and Guelph. Maritime Provinces, 10c. higher, f.o.b., St. John and Halifax. Three per cent. discount for cash in 30 days.

ORANGE MINERAL.—Casks, 7c.; 100-lb. kegs, 7¼c.; smaller quantities, 8¼c.

RED LEAD.—Genuine red lead, in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities, $5.75 per 100 lb. No. 1 red lead, casks, $4.25; kegs, $4.50, and smaller quantities, $5.50.

LITHARGE.—Ground, casks, 5c.; less quantities, 5½c.; flake litharge, casks, $5.25; smalls, $5.75 per 100 lb.

LINSEED OIL.—Raw, 1 to 4 barrels, 60c.; boiled, 63c.; raw, 5 to 9 barrels, 59c.; boiled, 62c. Terms, net cash in 30 days. Delivered in Ontario, between Montreal and Oshawa, at 2c. per gallon advance.

TURPENTINE.—Single barrels, 82c.; 2 to 4 barrels, 81c. Terms, net cash in 30 days.

SHELLAC VARNISH.—Pure white, $2.35 to $2.45; orange, $2.25 to $2.35.

MIXED PAINTS.—$1.20 to $1.40 per gallon.

CASTOR OIL.—8¾ to 9¼c. in wholesale lots, and ½c. additional for small lots.

SEAL OIL.—48 to 50c.

COD OIL.—35 to 37½c.

PURE CANADIAN PARIS GREEN.—Petroleum barrels, 13¼c. per lb.; arsenic kegs, 13½c.; 50 and 100-lb. drums, 14c.; 25-lb. drums, 14½c.; 1-lb. packages, 15c.; ½-lb. packages, 17c.; 1-lb. tins, 16c.; ½-lb. tins, 18c.

PURE ENGLISH PARIS GREEN.—Petroleum barrels, 14¼c.; arsenic kegs, 14½c.; 50 and 100 lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. paper boxes, 16c.; 1-lb. tins, 17c.

WINDOW GLASS.

TORONTO.

Prices are steadily stiffening, and the present would appear to be a safe time for retailers to lay in stocks of window glass, as the prices are likely to be advanced when there is a better understanding among the jobbers. We quote as follows: Under 26-in., $4.25; 26 to 40 in., $4.65; 41 to 50 in., $5.10; 51 to 60 in., $5.35; 61 to 70 in., $5.75; 71 to 80 in., $6.25; 81 to 85 in., $7; 86 to 90 in., $7.75. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days. Discount, 15 per cent.

MONTREAL.

The glass market has improved slightly since last week, and a few large orders have been secured. Our representative was informed that the price of glass for importation by the first steamer was somewhat lower than last year, but in all probability would not alter the prices now quoted. Our quotations are as follows: First break, 50 ft., $2; second, $2.10 for 50 ft.; first break, 100 feet, $3.80; second break, $4; third break, $4.50; fourth break, $4.75.

HENDERSON & POTTS

HALIFAX and MONTREAL

DEATH OF SENATOR A. T. WOOD.

AFTER an attack of pleurisy, which lasted but nine days, Hon. Andrew Trew Wood, member of the Canadian Senate, and one of Hamilton's most progressive business men, died at his home at 9.45 o'clock Wednesday morning.

The late Senator Wood was born at Mountnorris, Armagh, Ireland, in 1826, being the eldest son of eight children. He was given a sound English and mathematical education, and in 1844 he removed to New York, which city he left two years later to go to Toronto, where he entered the employ of the late James S. Ryan, hardware dealer. While in the latter's employ he was sent to Hamilton to manage a branch in that city. In 1848 he engaged with William Atkinson & Son, wholesale and retail hardwaremen, where he made rapid progress and won a high reputation with the trade. In November of the next year, at the death of Mr. Atkinson, he purchased the firm's retail branch, which he carried on for some time.

His advent in the wholesale hardware business was in 1852, when he bought out the business of Benjamin Miller & Co., which he carried on alone until 1859, when he formed a partnership with Matthew Leggatt. This partnership continued for 30 years, during which time the firm's business extended until it was recognized as an important factor in the hardware business in nearly every section of Canada.

When, in 1899, Mr. Leggatt retired, the present firm, Wood, Valance & Co., was formed, the deceased's son, William A., and George and William Valance being admitted into the company. The firm continues with branches in Toronto, Winnipeg and Vancouver.

While in no sense a speculator, the late Mr. Wood was associated with several companies which have contributed to the industrial prosperity of Hamilton. He was one of the first promoters of the Wellington, Grey and Bruce Railway, took an active part in the bonus campaign, and was a director of the company during its existence till it was absorbed by the old Great Western Railway Company. He also aided in promoting the Hamilton and Lake Erie and Hamilton and Northwestern Railway lines. He was the original organizer of The Ontario Cotton Mills Company, now The Ontario Cotton Company, of which he was president for a number of years, and of which he was director till his death. He was a director of The Hamilton Bridge Works Company for a number of years; also of the Bank of Hamilton. He was vice-president of The Hamilton Provident and Loan Company, with which he was connected since its inception. He was one of the promoters of the smelting works and was a large shareholder in The Hamilton Iron and Steel Company. He was also interested in other enterprises.

Outside of business matters he was public-spirited, progressive and alert. He had, too, been president of the old Mechanics' Institute and of the Hamilton Board of Trade.

He was a staunch Liberal in politics, and in the general elections in January, 1874, he was elected to the House of Commons, his colleague being Aemilius Irving, K.C. At that time the trade question was one of the issues before the people, and Mr. Wood declared himself in

The Late Senator A. T. Wood

favor of protection for revenue purposes, with due regard to the fostering of home manufacturing industries. Messrs. Wood and Irving were unseated on petition, and were re-elected in May, 1875. While in Parliament at that time Mr. Wood was chairman of the Manufacturers' Committee for four years, and he always took a leading part in the debates on matters affecting trade and commerce.

He was again, in 1896, elected to the Dominion Parliament, his colleague then being T. H. Macpherson. In 1900 Mr. Wood, who was a partner of J. V. Teetzel, K.C., for election purposes, was defeated along with Mr. Teetzel, their successful opponents for Parliamentary honors being S. Barker and F. C. Bruce. Mr. Wood was appointed to the Senate on January 21, 1901.

The late Mr. Wood was twice married. First, in 1851, to Mary E., eldest daughter of the late William Freeman, of Saltfleet, by whom he had two sons and a daughter. His surviving son, eldest daughter of the late George H. White, one of the pioneer settlers of York, C.W., was married to him in 1863, and by her he had three daughters. The children are William A., of Hamilton; George D., of Winnipeg; Mrs. Read, Toronto; Mrs. Bert Walsh, Toronto; Mrs. Robert Hobson and Mrs. Olmsted, wife of Dr. Ingersoll Olmsted, of Hamilton.

A GOOD YEAR FOR HARDWAREMEN.

A BUOYANT spirit was manifested by the members of the hardware section of the Toronto Board of Trade at the meeting on Monday afternoon. This spirit was also reflected in the address of Peleg Howland, who has been chairman of the section for the past year.

At the same time Mr. Howland utters a note of warning against overbuying, which the trade would do well to heed in the next year or two.

Mr. Howland's report was as follows:

Gentlemen,—Inquiry in the different branches of trade by this section confirms the general opinion that business has been good during 1902, prices being comparatively steady, the demand large, and the losses small.

Troubles, besides those ordinarily incident to business, have, however, existed, such as unreasoning competition, difficulty in obtaining goods, owing to either limited capacity of manufacturers, or shortages in supply of raw material.

Railroads have been slow in making deliveries, because of congestion of freight and shortage of rolling stock.

Complaints also are made that trade has been hampered by the difficulties of the St. Lawrence route and the lack of facilities at the port of Montreal.

The outlook is bright for at least the first half of 1903, the country, as a whole, being in perhaps a better condition for the consumption of goods than ever before.

The tendency to over trade, though hard to resist in such times, should be guarded against, and a careful outlook kept for signs of a change.

The burden of the higher freight rates, which came into effect on January 1, cannot entirely be shifted to the consumer, and will help towards increasing the expense of conducting business already largely enhanced by general conditions.

The movement on foot for an increase in the tariff, which is being inaugurated by the manufacturers, if successful, must affect all branches of this business, and should be carefully watched by the members of the section. Whether there will be any result has not, as yet, been publicly indicated.

PELEG HOWLAND,
Chairman.

The following officers were elected for 1903:

Chairman—A. A. McMichael.
Vice-Chairman—T. G. Dexter.
Secretary-Treasurer—Paul Jarvis.
Executive—Miles Vokes, S. Samuel, F. H. Watson, J. J. Garrisbope, J. M. Taylor and J. H. Patterson.

STOVES AND TINWARE

AND ALLIED TRADES

GURNEY CO.'S CONVENTION.

On Tuesday and Wednesday, the managers and salesmen of The Gurney Foundry Company, Limited, met in convention at the firm's general offices, Toronto, to discuss matters of interest to the trade and to the firm's customers. Those who were present: Edward Gurney, president; W. H. Carrick, vice-president and general manager; W. E. Gurney, 2nd vice-president; F. B. Skinner, treasurer; T. B. Alcock, secretary; James Hickey, superintendent; W. J. Hallarn, general jollier, Toronto; C. L. Lightfoot, manager of the British-Columbian agency, at Vancouver; James Drewe, manager of the Manitoba agency, at Winnipeg; R. J. Lockhart, vice-president and manager of The Gurney-Massey Company, Limited, Montreal; J. Lockhart, J. H. Wynne and J. E. Carron, salesmen in Quebec and the Maritime Provinces; J. A. Fairbairn, R. G. Wright, A. B. G. D. Tisdale, A. G. McNaughton, E. J. Brewer, E. C. Hancock, C. S. Williams and W. L. Helliwell, salesmen in Ontario.

The proceedings opened with remarks by President Gurney, Manager Carrick and Vice-President W. E. Gurney. Then a symposium was held, each traveller and manager giving for the benefit of all suggestions on general topics, as well as demonstrations on ranges, stoves and heaters, gas ranges and goods, and on other heating goods. On Wednesday afternoon a visit was made to the new plant, which is being erected, and which the staff were pleased to see is being rapidly pushed to completion.

The convention terminated in a fitting manner on Wednesday evening, when the firm banqueted the members at the National Club, where, after a thoroughly appreciated repast, oratory, music, and travellers' yarns combined to put everybody in the best of humor and ready to start out on the morrow to do the biggest year's business yet recorded.

FOUNDRY WILL BE ENLARGED

The St. John Foundry Company, organized in March last, has been so successful that enlargements and extensions of the business are now contemplated, says The St. John, N.B., Globe. The company was promoted by John E. Wilson, and its management has been largely in his hands, so the success attained may, in a great measure, be attributed to his energy and ability. The company started operations in its factory on Brussels street, with 14 hands, and the business has been conducted under serious disadvantages, not the least of these being the scarcity of coal. Still, everything has gone along so satisfactorily, that it is now contemplated to lease land adjoining the factory, on which an option has been obtained, and to build thereon an extension in which the growing business of the company can be handled. It is planned to go into the manufacture of stoves, ranges, etc., and to put on the market a line of goods that St. John will be proud of. Application will be made for an increase in the capital stock of the company from $6,000 to $20,000, and stock will be offered to some of the financial men of the city, who may feel like investing in the enterprise.

THE M'CLARY CO. OF LONDON—AFTER THE FIRE.

Energy and brains are the most suitable words that can be applied to the rapidity and thoroughness with which the debris and the destruction of the recent fire have been made to disappear.

The contracts for rebuilding were all made a week ago, and the work is progressing in double-quick time. The inside of the burned building is all thoroughly cleaned up and new flooring put in, and already the stamping machinery is in full running order, and every day's output is as heavy as at any time prior to the big blaze.

The branch managers, A. D. Kinnelly, of Toronto; A. A. Brown, of Montreal; and J. W. Driscoll, of Winnipeg, made their annual visit to London to confer with the managers there, reviewing the business of last year, and planning and arranging for 1903.

The reports from the various offices are exceedingly gratifying; the business of 1902 has been a record-breaker—all predicting, too, that the year on which we had now entered would exceed the last. The outlook for the company is very promising. Mrs. Driscoll accompanied her husband on his trip east from Winnipeg.

W. H. L.

London, January 21, 1903.

DIRECTIONS FOR STOVES AND FURNACES.

MUCH comment has been caused of late by the fatalities directly due to coal gas in badly ventilated houses, and the general verdict seems to be that many people are ignorant of the proper methods of using their stoves and furnaces.

That there is much ignorance of this matter is well known to all persons intimate with the stove and furnace trade. This is often due, in part, to carelessness on the part of the householder, but in many cases a remedy lies with the dealer who puts in the stove or furnace.

It should be an established rule of the trade that where a furnace is installed directions regarding its use should be printed and pasted up as near to it as possible. These directions should be so clear and comprehensive that the householder should have no trouble in carrying them out. It would be best if the directions were prepared and printed by the manufacturer of the stove, but where the maker does not do so, the retailer should protect his own interests by doing it. If this were always done there would be less complaint regarding the working of furnaces, for often the furnace gets the blame for troubles that are due solely to ignorance or carelessness on the part of the attendant.

Directions regarding the use of stoves are also advisable. It is well known that when properly handled a stove will give better results, will be more economical than when its proper care is not understood by its owner. The owner, of course, blames the stove, whereas if full directions were given with the stove such trouble would probably be obviated, and instead of a dissatisfied customer the dealer would have a pleased one.

AMONG THE TRADE.

James Martin, of Gillies & Martin, foundrymen, Listowel, Ont., died at his home in Teeswater, on Wednesday, last week, aged 68 years. Mr. Martin retired from active connection with the Listowel foundry last summer, on account of his failing health.

E. A. Runions, tinware and hardware dealer, Cardinal, Ont., has sold out to J. E. Magee, of the same town. Mr. Magee is well known in Cardinal and vicinity, and should make a success of the business

MANTELS, GRATES and TILE.

Are any of your customers building a new house? If so, why not try and sell them a mantel as well as hardware? They will want one, and it will pay you. Write us for catalogue and price.

THE GURNEY FOUNDRY CO., Limited

TORONTO. WINNIPEG. VANCOUVER.

THE GURNEY-MASSEY CO., LIMITED, MONTREAL.

Established 1860. Incorporated 1865.

"Eureka" Cheese Factory Milk Cans.

PATENTED JANUARY, 1 01

BROAD HOOP PATTERN.

Made of 22 gauge, 1 0 centre hoops. Always supplied swedged unless ordered otherwise.

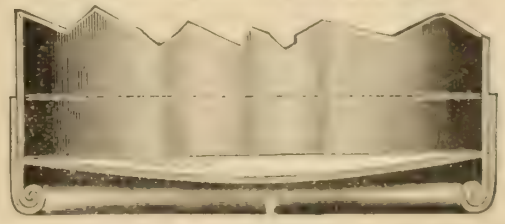
We also make "Eureka" Cans, 24 gauge, with centre hoops; and old style Cans with either slip or rest covers, swedged or not swedged.

Milk Cans and Milk Can Trimmings.

"FLUSH" SIDE HANDLES

Means no more bruised, nor broken milk cans, as is the case with protruding handles.

(See how the outer Rim and Inner are rolled in.



SECTION OF OUR PATENT MILK CAN BOTTOM.

This demonstrates the popularity of

Davidson's Patent Milk Can Bottoms.

YOU should buy our Milk Cans and Trimmings, because our Broad Hoop Bottom has all the advantages of a seamless bottom without the strain that spinning entails. The rim is turned in with edge of bottom, giving double thickness and heavy rolled edges that will not tear factory floors nor waggons.

They have no air spaces which make soldering difficult, but sufficient space is left between bottom proper and rim to allow body of can to be inserted 1/16 of an inch, making permanent joint.

Bottoms are thus sweated in with half the solder.

Bottoms are concave, draining to the centre, therefore are easier to wash out.

They will not corrode like those which drain to the side. They have flush side handles.

Top bands are "SHOULDERED" and have cut out at joint, making neater and cleaner joint than half those than with old style hoop.

All bands have retinned edges.

For durability, finish and economy in making up, our Trimmings are unequalled.

The Thos. Davidson Mfg. Co., Limited Montreal, P.Q.

INDUSTRIAL GOSSIP

DAVID McNAIR, Vancouver, B.C., is head of a company which has paid $11,000 for a site on Burrard Inlet, on which they will erect a large shingle mill.

The Guelph Railway Company is asking for power to establish the Guelph Radial Railway, with connections, embracing Elora, Fergus, Arthur, Mount Forest, Erin, Puslinch Lake, Galt, Hespeler, and Preston, and for legislation to enable the ratepayers of the city of Guelph to subscribe for $25,000 stock in the same.

The last Manitoba Gazette gives notice that The Manitoba Windmill and Pump Company, Limited, of Brandon, seeks incorporation at a capital of $20,000, to deal in pumps, windmills, and machinery. The applicants are J. McDiarmid, Truman Newton, G. F. Williamson, J. M. Riesberry and L. E. Williamson, all of Brandon.

London, Ont., papers announce that the city expects a building boom in the spring. As for Brantford, says The Courier, the place is too much on the hustle to wait for spring conditions. Right in midwinter, the large new Cockshutt Plow factory is in course of rapid construction; the doubling of The Pratt and Letchworth works is in full swing, and new houses are making their appearance on all sides.

The local unions constituting the Toronto Metal Council will be more or less involved in a general movement for the adoption of the nine-hour day: Pattern makers, molders, coremakers, machinists, brass workers, metal polishers, boilermakers, and iron shipbuilders, blacksmiths, electrical workers, and the allied metal mechanics. In all these trade special efforts have been directed during the past year towards strengthening their organizations, and the metal workers now believe they are strong enough to enforce their demands.

At the C.P.R. Board meeting on Monday, last week, it was decided to go on with the Arcola, Alta., extension as soon as the spring opens up. The contract for the work has not yet been awarded, but the president says contractors are now looking over the plotted line, which runs from Regina to Arcola. G. E. Jeykel, of Montreal, who constructed some portion of Sir William Van Horne's Santiago de Cuba Railway, has been up there and expects to get the contract, or a portion thereof. Work will commence from the Regina end, and hundreds of teams, principally mules, will be engaged in the work.

OTTAWA STEEL CASTING COMPANY.

The Baldwin Iron Works on Bridge street have changed hands. They have been purchased by a newly-formed concern known as The Ottawa Steel Casting Company. One of the moving spirits in the new concern is Ald. Askwith. The present premises will be extended, blast furnaces put in, and a general business done in foundry and steel-casting work. The industry already gives employment to a good number of men, but it is probable that as a result of the change and extension of the business the staff will be considerably increased. The new company has great faith in the industrial development of the Chaudiere.

DEERING WORKS TO START SOON.

Manager Kennedy, of the Deering division, International Harvester Company of America, Hamilton, Ont., states that as soon as the necessary electric power can be supplied them by The Cataract Power Company, they would be ready to start operations. It is expected that The Cataract Company will be able to furnish the necessary electric energy during the coming week. The work on the several big buildings now in process of construction is being rapidly pushed forward, the contractors taking every advantage of the present mild weather. Several of the heads of factory departments are now in the city, and it will not be many days before active operations are begun at the big institution.

BUSY PORT ARTHUR.

The merchants of Port Arthur are looking forward to a busy summer. Rumors are afloat of a large amount of work which is to be gone on with at this place, commencing early in the spring, among which is said to be the erection of a storage elevator by the C.P.R.; another elevator and coal docks by the C. N.R., and other improvements by these two companies, which will give employment to considerable labor. There is also a possibility of The Pigeon River Lumber Company increasing their large industry by the erection of a number of wooden manufactories, which would mean a large influx of labor to this place. There is to be a lot of building, as at the present time contracts have been let for a number of modern dwellings, and it is not unlikely that the business blocks will be added to.

A NEW STEEL COMPANY.

A Sydney, N.S., correspondent writes that a company, The Canadian Steel and Coal Company, have organized to carry on business there. The company have acquired an interest in the Cape Breton Railway, formerly owned by The Dominion Securities Company; also the property known as the New Campbellton Mines, and 4,000 acres of iron-ore deposits at tidewater in Quebec. It is the intention of the company to develop on a large scale coal properties in this county, and ultimately to establish a large iron and steel industry, either in Quebec or Cape Breton, but probably in the latter place. The company's property in Cape Breton covers about 12,000 acres and they own about 5,000 acres in Quebec.

Natashquan, in Quebec, where the company owns iron properties, is situated on the north shore of the St. Lawrence, opposite the Island of Anticosti. This shore, for hundreds of miles, contains deposits of magnetic iron, which have been worked to some extent in days gone by and experimented with from time to time, but never with any degree of success owing to the property contained in this iron, titanium, as it is called.

MR. STARR RETIRES.

January 31 ends the business year of the firm of C. E. Starr & Son, hardware merchants, Wolfville, N.S. After that date C. E. Starr retires from the firm, in which he has been actively engaged for over 30 years. The business will be taken over by Illsley & Harvey, while G. S. Starr, son of C. E. Starr, retains an interest.

A number of improvements will be made in the building for the further convenience of the firm in conducting their growing business, and the salesroom will also be enlarged.

The firm have sent out to their customers a circular announcing this change, and also offering special bargains during this month.

Mr. Starr has well earned a rest after a long and active career as an honorable business man, and we hope, with all who know him, that he may live long to enjoy it.

Illsley & Harvey, who succeed him, have the name of being energetic and experienced men. There is no doubt of their being successful.

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

A CHATTEL mortgagee is in possession of the stock of H. C. Maas, hardware merchant, of Toronto.

Parker & Co., general merchants, of Hawkesbury, have assigned to A. Hagar.

J. U. St. Armand, general merchant, of St. Genevieve de Batiscan, Que., has assigned to P. P. Martin.

Telesphore Pelletier, general merchant, Cape Chatte, Que., is offering to compromise at 15c. on the dollar.

A meeting of the creditors of C. G. Folkes, general merchant, of Shanotick, Ont., will be held on January 22.

PARTNERSHIPS FORMED AND DISSOLVED.

The St. Henri La Vorturier, Ferreur, carriagemakers, of St. Henri de Montreal, Que., have dissolved partnership.

Allen & McIvor, hardware merchants, Goderich, Ont., have dissolved partnership, George L. Allen continuing.

Johnson & Besette, general merchants, Village Richelieu, Que., have dissolved partnership; a new partnership has been registered.

Robert McIntosh, agricultural implement and lumber merchant, of Saskatoon, N.W.T., is admitting his brother into partnership.

SALES MADE AND PENDING.

Stephen Smith, general merchant, of Maryland, Que., has sold out.

The business of S. J. Bond, harness dealer, Mount Brydges, Ont., is for sale.

Currie & Burland, agricultural implement agents, Souris, Man., have sold out.

Sivain & Emerson, harness dealers, of Roland, Man., have so,d out to David Hardy.

Norman Fanson, harness dealer, Pilot Mound, Man., has sold out to G. W. Brisbin.

E. M. Marshall, hardware merchant, Sarnia, Ont., has sold out to Conse & Rongvie.

Herman Goski, general merchant, Copperclift, Ont., has sold out to John R. McKinnon.

R. W. Hamill, agricultural implement agent, Carlyle, Man., has sold out to Lawlor & Co.

The stock of William Irving (estate of), hardware merchant, Austin, Man., has been sold to George Napier.

A. J. Stockwell, hardware and implement merchant, Esteran, N.W.T., has sold out the implement business.

G. Grondin, general merchant and hotel keeper, of Notre Dame du Portage, Que., advertises his hotel for sale.

NEW FIRMS AND CHANGES.

C. D. Fontaine & Co., St. Cyrille de Wendover, have registered as general merchants.

G. F. Hodgins, general merchant, of Shawville, Que., is opening a branch at Maryland.

The Manitoba Windmill and Pump Co., Limited, Brandon, Man., are applying for incorporation.

J. L. Gibson, agricultural implement agent, Wolseley and Sintaluta, N.W.T., has been succeeded by O. Tourigny.

The G. T Baird Co., Limited, lumber and general store merchants, of Perth, N.B., are applying for incorporation.

The Martineau Co., manufacturers of iron, Quebec, are applying for a charter.

T. Copeland, hardware merchant, Winnipeg, has gone out of business.

The Marshall-Wells Company, wholesale hardware merchants, Winnipeg, are applying for authority to increase their capital from $50,000 to $500,000.

FIRES.

The plant of The Hamilton Powder Company, Montreal, at Beloeil, has been burned.

J. D. Frier, general merchant, Waterford, N.B., has been burned out; partially insured.

The Peck Rolling Mills Company, Montreal, nail manufacturers, have been burned out; insured.

The stock of Leeder & Parsons, general merchants, Quyon, Que., has been slightly damaged by fire; insured.

DEATHS.

J. U. Ireland, general merchant, Gourock, Ont., is dead.

Walter Mullett, of the firm of Walter Mullett & Son, blacksmiths, Bancroft, Ont., is dead.

Hon. A. G. Wood, of the firm of Wood, Valance & Co., wholesale and retail hardware merchants, Hamilton, Ont., and of Geo. D. Wood & Co., wholesale hardware merchants, Winnipeg, is dead.

DEATH OF THE OLDEST RAILROAD LOCKMAKER.

THOMAS SLAIGHT, president of The Thomas Slaight Lock and Manufacturing Company, of Newark, N.J., died on Sunday, January 4, 1903, at the age of 83 years. He was born in New York City, January 8, 1820.

At the early age of 15 years (in 1835), he apprenticed with Dr. Sol. Andrews, who, at that time, was a celebrated lock manufacturer at Perth Amboy, N.J. In 1841, he went with Day, Newell & Day, bank-lock manufacturers in New York City. In 1844 he came to Newark to take charge of the plant of Henry C. Jones, whose specialty was padlocks.

In July, 1849, Mr. Slaight started in business for himself, and from the start he was so successful, that, in 1856, he built and occupied the large building at 113-115 N.J.R.R. Ave., where his business is still located. His specialties were the various styles of railroad locks of the finest grade, and also Government locks. In March, 1901, on account of advancing years, Mr. Slaight incorporated his business under the name of The Thomas Slaight Lock and Manufacturing Co., he being made the president.

David D. Slaight, who has been associated with his father in the business for nearly 20 years, will succeed him as president of the company.

THE B. GREENING WIRE CO., LIMITED.

A REPRESENTATIVE of "Hardware and Metal" was very much struck on a recent visit to the premises of The B. Greening Wire Company, Limited, Hamilton, Ont., with the immense growth within the last 12 months. They now occupy their handsome and commodious offices which they have built up on the site of the old office, occupied by them for the last 10 years, and from the increase in the staff employed there, would give some idea of the largely increased business this firm are enjoying.

There is a special three-storey brick building put up this year for the manufacture of poultry netting, which they have only been making one season, but which has gained such a reputation on the market that they have already had to put up this special building and double their plant, and now they are fully sold up to their capacity up to the end of March. They have added very largely to their weaving plant, and put up a new tower for painting fly cloth which alters the appearance of the building altogether.

This firm have now been manufacturing wire rope and weaving heavy cloth for upwards of 50 years, and can justly claim to be not only pioneers in that line of business, but also in wire drawing. They manufacture every class of wire for all purposes, besides the products of wire, such as wire rope of different grades, wire cloth from the heaviest steel mining screens, slab or refuse burner tops for sawmills, all kinds of drying floors, such as oatmeal and malt kiln, woollen and cotton-drying floors, for grain-cleaning machinery in grist mills, threshing machines and fanning mills, down to the finest wire cloth.

Also, perforated metals in steel, zinc, brass, copper and aluminum, and, in fact, everything that can be made in wire.

The firm are descendants from an old family in England that have always been in the wire business. Nathanael Greening, having started the firm that is in existence to-day at Warrington, England, in 1799. The present firm here, having been started by Benjamin Greening in 1872 and incorporated by his son, S. O. Greening, president of the present company, in 1889.

The firm have a warehouse at No. 122 St. Paul street, Montreal, for the convenience of their eastern customers, where they have a full line of everything they manufacture, with J. H. Hanson in charge, but all the manufacturing and bookkeeping is done at the headquarters in Hamilton.

Hamelin Bros. & Co., general merchants, of Melita, Man., are applying for incorporation.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, January 23, 1903.

HARDWARE.

TRADE during the past week has improved considerably, and orders for spring delivery are coming to hand in large numbers. A fair business is being done in the setting up trade, and dealers say this trade is better than it has been for years. There has been a decline of 10c. per 100 lb. in barb wire, and all shipments, as well as stock on hand, will be guaranteed until May 1. There is also some talk of a duty being placed on barb wire in March. Mrs. Potts' sad irons, both plated and plain, have advanced about 5 per cent. Stanley planes are about 5 to 8 per cent. higher, and levels, about 10 to 15 per cent. There are also a couple of changes in galvanized wire, that we would draw to the attention of our readers. At present there is every indication of a heavy spring trade, as already there is quite a movement in freezers, harvest tools, shovels and spades, wire cloth, barb wire, fence wire, spring hinges and lawn mowers.

LAWN MOWERS.—A few orders have come to hand during the week. Prices are as follows: 10½ in. wheel by 12-in cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—There is a small movement in this line, and spring trade is about to start. A decline in price will be noticed in our quotations. We quote: $2.80 per 100 lb., f.o.b. Montreal; $2.45 f.o.b., Cleveland, in carlots of 15 tons; $2.67½ f.o.b., Cleveland, in smaller lots.

GALVANIZED WIRE.—There is very little doing in galvanized wire, and the market is steady. Our quotations are as follows: No. 5, $3.70; Nos. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—The market remains quiet and prices are unchanged. We quote: Bright and annealed, $2.50 per 100 lb. f. o. b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE WIRE.—Very few orders are being received. The discount is still 25 per cent. with the following extras: 1 and 2-lb. hanks, 25c per 100 lb.; ½-lb. hanks, 37½c. and ¼-lb. hanks, 50c.

BRASS AND COPPER WIRE.—The market is slow in both these lines, and the discount remains at 62½ per cent.

FENCE STAPLES.—Spring orders are commencing to arrive for fence staples. Our quotations are: $3 per 100-lb. keg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

WIRE NAILS.—Trade continues to be quiet, and the prices are unchanged. We quote: Carlots, $2.40, and small lots at $2.45 per keg f.o.b. Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

CUT NAILS.—The market is somewhat improved. In carlots, the price is $2.40 per keg and in small lots, $2.45 per keg.

HORSE NAILS.—Prices remain firm and a few orders are being received for

small lots. We quote the discounts as follows: "C" brand, 10, 10 and 7½ per cent. off; on "M" brand, "Oval," 57½ per cent.; "New City," 57½ per cent; "New Countersunk," 65 per cent.; "Monarch," 65 per cent.; "Peerless," 50 and 7½ per cent.

HORSESHOES.—A fair business is doing and the prices are steady. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger $3.35; No. 1 and smaller, $3.60; snow pattern, No. 2 and larger, $3.60; No. 1 and smaller, $3.85; X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.45; No. 1 and smaller, $3.70; feather weight, all sizes, 0 to 4, $5; toe weight, all sizes, 1 to 4, $6.25. Shoes, more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

RIVETS AND BURRS. The market is quiet and few orders are being booked. The discounts are quoted as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS. There is nothing new to report this week. Discounts are Norway carriage bolts, 55 per cent.; common, 50 per cent; full square carriage bolts, 55 per cent.; machine bolts 50 and 5 per cent.; coach screws, 66 2-3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50 and 5 per cent. To any retailer an extra discount of 10 per cent. is allowed. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3½c. per lb. off list; hexagon nuts, 3¾c. per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—The discounts remain the same and trade is quiet. Prices follow: Round head bright, 82½ and 10 per cent.; flat head bright, 87½ and 10 per cent.; brass, round heads, 75 and 10 per cent.; brass, flat heads, 80 and 10 per cent.

CORDAGE. There is no change to note this week. Quotations are as follows: Pure manila, 14c.; British pure manila, 12c.; sisal, 11c.; double lathyarn, 11c.; single lathyarn, 10½c.

BUILDING PAPER.—A few future orders are being booked, otherwise the market is quiet, and our quotations are as follows: Tarred felt, $1.75 per 100 lb.; 2-ply, ready-roofing, 90c. per roll; 3 ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 50c. per roll; tarred fibre, 60c. per roll, O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN WIRE CLOTH.—The spring trade is opening for screen wire cloth, and the prices are quite firm. The price quoted is $1.40 per 100 square feet.

FIREBRICKS.—The prices remain unchanged. We quote: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—The cement market is quiet, and very little business is being done. Our quotations are as follows: Canadian cement, $1.90 to $2.25; German, $2.20 to $2.30; English, $2.15 to $2.25, Belgian, $1.70 to $1.95 per barrel ex store, and American, $2.10 to $2.20 ex-cars.

SNOW SHOVELS.—A few sorting up orders are being received, and the prices are as follows: "Hamilton," $2.25 to $2.40; "Victor," 40 per cent. off; steel railroad shovels, 48 and 5 per cent. off.

FIRE SHOVELS.—There is still a fair business being done in fire shovels. The discounts remain unchanged. No. 70, $½ to 40c. per dozen; No. 55, 55 to 60c.; No. 57, $2½ to 90c.; No. 60, $2½ to 90c.; No. 65, $1.37½ to $1.45; No. 80, 50 to 55c.; "Duplex," No. 7, $1.21; No. 9, $1.52; No. 11, $1.82.

HOCKEY STICKS.—A few small orders are still being received by the jobbers. We quote: Best second-growth, goal keepers', $4.20 per doz.; ash, $2.90; elm, $2.25; boys' elm, $1.10; common, 90c. Regulation pucks, $1.50 per doz.

COAL HODS.—The trade in coal hods is about finished for the season. Prices follow: Japanned, 16-in., $4.50 per doz.; 17-in., $4.80; 18-in., $5.10; with gold band, 17-in., $5.10; 18-in., $5.40. Galvanized, 16-in., $6.20; 17-in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

LANTERNS.—A fair trade is doing in this line at our last quotations. We quote as follows: Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7 per doz.; dash-board, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper-plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

METALS.

The demand for heavy metals is increasing, and pig lead, pig tin and pig copper are all firmer. The pig-iron markets have been none too active, although we hear of a few large orders. All Canadian furnaces are still behind with their orders for some months, and some supplies of Scotch pig iron have been imported, $21 to $24.50 being quoted for No. 2 Summerlee, and $23.50 for Calder, net terms. Sheet zinc is now quoted at $5.75 to $6. On the foreign markets higher prices are being asked for pig iron, but it is doubtful if any business has been done under them. Structural iron and steel is in active movement, though manufacturers have now, for the most part, caught up with the demand and prompt deliveries are no longer insisted upon, except in a few cases. Bar iron is expected to become firmer. Canada plates on the English market are strengthening, and have advanced 2s. 6d. per ton. Terne plates have also advanced 6d. per box, and in sympathy, a firmer feeling is noticeable here. Black sheets, although there has been no actual advance in prices, are very firm on the foreign markets, and higher values may be anticipated. In tinplates, the foreign market has advanced 1½ to 1d. per box, and the market is steady and firmer.

BAR IRON.—Trade is fair, and the market is looked upon as somewhat firmer. We quote: Merchants' bar, $2; horseshoe iron, $2.25; forged iron, $2.20.

BLACK SHEETS.—Trade is fair and prices steady. Quotations are as follows: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 21 gauge, $2.50; 8 to 20 gauge, $2.50.

GALVANIZED IRON.—Business is quiet and the prices remain unchanged. We quote: No. 28, Queen's Head, $4.40; Apollo, 10½-oz., $4.30; Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand $4.05. For less than case lots 25c. extra is charged.

LEAD PIPE.—There is a fair business being done. Composition and waste are quoted at 8c. and ordinary at 7c. The discount is 37½ per cent.

IRON PIPE.—The market is fairly active and the prices remain about the same. Standard pipe, per 100 feet, in lengths under 19 feet: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1 in., $5.20; 1¼, $7.35; 1½, $8.95; 2 in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.45; ½, $3.85; ¾, $5; 1 in., $7.20; 1¼, $10.05; 1½, $12.20; 2-inch, $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, ½, $4.20; ¾, $5.25; 1 in., $7.55; 1¼, $10.55; 1½, $12.75; 2 in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1 in., $9.50; 1¼, $13.25; 1½, $16; 2 in., $21.90. For threads and couplings 5 per cent. is added.

TINPLATES.—The local market is still steady and firm, while an advance has taken place on the foreign markets. We quote: Cokes, $4.25 and charcoals, $4.75 to $5.25.

SOIL PIPE AND FITTINGS.—The market is very quiet and prices remain unchanged. Discounts are as follows: Light soil pipe, 3 to 6 inch, 50 per cent.; medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8 inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.; extra heavy fittings, 8-inch, 45 per cent.

PIG IRON.—The market is firm. We quote $23.50 to $24.50, ex store, Montreal.

INGOT COPPER.—The market continues to be firm. We quote $13.50 to $14.50 per 100 lb.

INGOT TIN.—The market remains the same as last week. We quote $30 to $32 per 100 lb.

PIG LEAD.—The market is quite firm. In carlots, the price is $2.90, and in small lots, $3.25.

STEEL.—A few orders are being booked for steel, and the market is firmer than a week ago. Our quotations are as follows: Sleighshoe, $2.10 to $2.20; tire, $2.20 to $2.25; bar, $2.05; spring, $2.85 to $3; reeled machinery, $2.75; toecalk, $2.60 to $2.90; machinery (iron finish), $2.10; mild steel, $2.05; square harrow, $2.15.

TOOL STEEL.—There is a small movement in tool steel, and the market is steady. Our quotations are as follows: Black Diamond, 8c.; Sanderson's, 8 to 12c., according to the grade; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 65c. per lb.

CANADA PLATES.—The market is still quite firm, and a fair trade is doing in galvanized plates. We quote as follows: 52s, $2.70 to $2.80; 60s, $2.85 to $2.90; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized 70s, $4.45 to $4.55.

TERNE PLATES.—In sympathy with the foreign markets, a firmer feeling prevails on the local market. We quote $7.50.

COIL CHAIN.—A brisk demand continues in coil chain. Quotations are as follows: No. 6, 10c.; No. 5, 9c.; No. 4, 8½c.; No. 3, 7c.; ¼ in., 6½c. per lb.; 5-16, $5; 5-16 exact, $5.25; ⅜, $4.30; 7-16, $4.10; ½, $4; 9-16, $3.80; ⅝, $3.70; ¾, $3.60; ⅞, $3.55; 1 in., $3.50. In carload lots an allowance of 10c. is made.

SHEET ZINC.—A slight advance is noticeable in this market. We quote $5.75 to $6.

EASTLAKE SHINGLES

ARE SO EASY TO HANDLE.

They fit together perfectly by means of their patent side lock—can be quickly laid by any handy man—and last so long, being absolutely Fire, Rust, Leak, and Lightning Proof. These are the points that commend them to your customers.

You're not doing all the business you might do, unless you keep Eastlakes in stock.

Metallic Roofing Co., Limited

TORONTO. MONTREAL. WINNIPEG.

ZINC SPELTER.—There is nothing doing in this market. We quote $5.25.

SOLDER.—A fair trade is doing in solder, and the market is steady. We quote as follows: Bar solder, 20c., and wire solder, 18c.

RAW FURS.

The London sales take place this week, and Canadian prices will probably be regulated accordingly, toward the end of the week or a little later. At present there is no change. Good prices prevail all around on this market and offerings are increasing, including coon skins, which are not so scarce as it was thought they would be. With the increased receipts there is also a noticeable improvement in the quality of the skins offering. A Montreal dealer is said to have paid $90 recently for the skin of a black fox. We quote:

SCRAP METALS.

There is a good amount of business being done at present, and dealers report the market quite firm. Considerable shipments have been made of late. Quotations are still as follows: Heavy copper and wire, 9c. per lb.; light copper, 8c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $15 to $16; No. 2, $7 per ton; machinery scrap, $16.50 to $17; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6½ to 6¾c. per pound.

HIDES.

Hides last week were ½c. lower than our quotations. This week has shown no further decline, but the market has been steadier, and leathers of all sorts seem to be firmer. Lambskins have advanced to

75c. We quote as follows: No. 1 hides, 7c.; No. 2 do., 6c.; No. 3 do., cut skins, 8 to 10c.; and sealskins, 75c.

MONTREAL NOTES.

Sheet iron has advanced about 25c. Many fear there will be a decline in barb wire at 10c. and 11c. f.o.b.

ONTARIO MARKETS.

Toronto, January 23, 1903.

HARDWARE.

Since the beginning of the year the business with the hardware jobbers and manufacturers in Toronto has been satisfactory, and from the way business has opened out it looks as though 1903 would be an even better year than 1902. The only disturbing feature at the present time is that the manufacturers are looking for and expecting a change in the tariff. As a consequence, buying is unusually active in some lines that might be affected, and it is believed this business will be missed later in the year. Another disturbing feature is the fact that manufacturers are withdrawing quotations on some staple lines in which they may be a change, which has an unsettling effect. There is no doubt, however, that Canada is in a prosperous condition, as the demand from British Columbia, the Northwest Territories and the Lower Provinces is greater than it has been in the history of the hardware business for some time. The only changes of account are in wire, which have been lowered to meet the competition of European lines. Prices are otherwise steady and featureless.

BARB WIRE.—There is a large tonnage booked for the spring trade. Prices are 10 to 12½c. lower. The base price is now as follows: $2.55 from Cleveland, and 10c. less in carlots. From stock, Toronto, $2.80.

GALVANIZED WIRE.—Orders for spring deliveries are large. Nos. 9, 12 and 13 show a reduction of 15c. We quote as follows: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE.—Orders are coming in well for oiled and annealed. Prices are steady. We quote the base price as follows: $2.50 per 100 lb. Oiling, 10c.; coppering, 60c. and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—Trade has been fairly booked, as an advance is anticipated. We quote $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS.—There is nothing doing. We quote $2.50 per keg.

HORSE NAILS.—An ordinary sorting trade is reported. Quotations on "M" brand have been withdrawn. Prices are unchanged. Discounts are: "C" brand, oval head, 10 and 10 and 7½ per cent.; on "Monarch," 65 per cent., and "Countersunk" head, 65 per cent.; "Peerless," 50 and 7½ per cent.

HORSESHOES.—A good sorting demand with prices steady. We quote as follows: Iron shoes, No. 2 and larger, light medium and heavy, $3.45; snow shoes, $3.70; light steel shoes, $3.55; feather weight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—A steady trade doing. We quote: Flat head bright, 87½ and 10 per cent. discount; round head bright, 82½ and 10 per cent.; flat head brass, 80 and 10 per cent.; round head brass, 75 and 10 per cent.; round head bronze, 65 per cent. and flat head bronze, 70 per cent.

RIVETS AND BURRS.—A steady demand is noted, and our quotations are as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent. copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—A brisk demand continues. There is no change in prices. Carriage bolts, common ($1 list), 50 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron ($3.00 list), 55 and 10 per cent.; machine bolts, all sizes, 50 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—It is early yet, but some orders are being received. Prices are unchanged. Discount is 45 per cent., and the list price has been reduced $3 per doz. for Olds' goods, $2 for Gray's and $1 for Burns'.

ROPE.—Orders are of a small nature. We quote: Pure manila, 14c.; British manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3-cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—Orders continue to arrive freely. No change in the discounts is noted, they continuing at 60 and 10 per cent.

LAWN MOWERS.—The same is true of this line. Our quotations are as follows: Woodyatt, 12-inch wheels, $7.50; Star, 12-inch wheels, $5.50; Daisy, 12-inch wheels, $4.90; Philadelphia, 10-inch wheels, $6; Ontario, 10-inch wheels, $12.75. The other prices are in proportion.

CUTLERY.—The volume of business is small and prices are steady.

BUILDING PAPER.—A particularly good demand for roofing felt for shanties is noted. We quote as follows: Dry sheathing, grey or straw, 35c. per roll; tar sheathing, grey or straw, 45c. per roll; dry fibre, 50c. per roll; tarred fibre, 60c. per roll.

TINWARE AND ENAMELLED WARE.—A good movement continues in milk-can trimmings, but the general trade is moderate.

RANGE BOILERS.—The demand continues heavy. Prices are firm. We quote: 18 and 30 gallon, $6; 35 gallon, $7; 40 gallon, $8; 52 gallon, $12.50; 63 gallon, $19; 82 gallon, $23; 100 gallon, $31, and 120 gallon, $37.

EAVETROUGH.—No change in prices, and there is a good trade doing.

PLUMBERS' BRASS GOODS.—The activity continues and prices keep firm.

SCREEN DOORS.—Orders for later delivery continue generous. We quote as follows: Screen doors, common, 2 or 3 panel, walnut stained, 4-inch style, $6.60; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3-inch style, 20c. per dozen less.

CEMENT.—There is not much doing as yet. The prices are nominal. Our quotations are as follows: Canadian Portland, $2.80 to $3.20; hydraulic, $1.35 per barrel. At the works the prices are $2.50 to $2.70 per barrel.

METALS.

The general market is more active and stock shipments have been more active during the past week. Some good round orders have been filled to make up shortages in some lines. The spring outlook, as judged by the orders booked, is very promising.

PIG IRON.—The market is even stiffer than a week ago, owing to the reported reduction of the output of Canadian iron, due to the scarcity of coke. Some English iron has been quoted here at figures varying from $21.00 to $23.50 per ton, though some No. 1 English is being sold at $24, when it can be had. Prices are as follows: $23 to $25 for No. 1 and $22.50 for No. 2 at the Canadian furnaces. No. 2 Summerlee is quoted at $25 on track, Toronto.

STEEL BOILER PLATES.—We quote $2 per 100 lb. at Pittsburg.

TOOL STEEL.—The demand keeps very brisk. Prices are steady, as follows: "B C" and "Black Diamond," 10 to 11c.; Jessop's, 'Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8c. to 9c.; Park's "Silver," 12 to 14c.; Park's Special," 15 to 20c.

MILD STEEL.—Prices continue steady. We quote $1.90 per 100 lb. at Pittsburg and $2.75 per 100 lb. on track, Toronto.

SPRING STEEL.—The demand is normal, but the mills are still behind their orders. We quote $3.50 per 100 lb. on track, Toronto.

BAR IRON.—Prices are firm as the market keeps active. We quote the base price: $2.05. Extras cut to length while rolling: 2 ft. and over, 10c. per 100 lb., 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft. by special agreement, according to length and size.

BLACK SHEETS.—The demand is improving. Prices are unchanged. We quote as follows: Common, $3.15 for 28 gauge and dead flat, $2.50 for 26 gauge.

CANADA PLATES.—The stock demand is small, but orders are being freely booked for later delivery. Our quotations are: All dull, $2.90 to $3; half-polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—There is a more active demand. Prices keep steady. We quote as follows: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—The demand keeps brisk. Owing to speculation on the London market the prices have been forced up there, and Canadian jobbers have followed suit. The prices are firm at $31 to $32 per 100 lb.

TINPLATES.—Business is more active, with prices stiff. Quotations are as follows: Charcoals, $4.75 to $5 and cokes, $4.25 to $4.50 per box.

COPPER.—The demand for ingot copper is better. Sheet copper is in fair request at firm prices. We quote: Ingot copper, $13 and sheet couper, $22 to $23 per 100 lb.

BRASS.—Unchanged. The discount is 15 per cent.

LEAD. A fair trade is reported. Prices are unchanged at $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE. Business keeps brisk with prices stiff. We quote per 100 ft., Black pipe, ⅛ in., $3; ¼ in., $2.30 to $2.40; ⅜ in., $2.65; ½ in., $2.85; ¾ in., $3.65; 1 in., $5.20; 1¼ in., $7.35; 1½ in., $8.95; 2 in., $12.55; 2½ in., $20 to $21; 3 in., $24 to $25; 3½ in., $30 to $32; 4 in., $37.50 to $38.

ZINC SPELTER. There is more activity. We quote 5 to 6c. per lb.

ZINC SHEETS. Business is brisk. We quote the base price: Cask lots, $6 to $6.25 and part casks, $6.25 to $6.50.

SOLDER. There is no change. Prices are steady at 20c. for guaranteed half and half, and at 17 to 18½c. for wiping.

ANTIMONY. Business is in small lots. The price is steady at $9 per ton.

HIDES, SKINS AND WOOL.

HIDES. There is a plentiful supply and the market continues weak. We quote as follows: No. 1 green, 7½c.; No. 2 green, 6½c. per lb.; No. 1 green, steers, 8c.; No. 2 green, steers, 7c. per lb.; cured, per lb., 8¼ to 8¾c.

CALF SKINS. Business continues dull. We quote: Veal skins, No. 1, 6 to 14 lb. inclusive, 10c.; No. 2, 8c.; No. 1, 15 to 20 lb. inclusive, 9c.; No. 2, 7c. Deacons (dairies), each, 60 to 70c.

SHEEPSKINS. There is still a good demand for these, and the price for better grades has advanced 5c. We quote 80 to 90c.

WOOL. Fleece wool is pretty well marketed. There is a fair demand for pulled wools and various grades of foreign wools. We quote: Unwashed wool, per lb., 8 to 8½c.; fleece wool, 15c.; pulled wools, super., per lb., 15 to 16c.; ditto, extra, 19 to 20c.

TALLOW. The market continues unchanged. We quote: Tallow, per lb. (on track, Toronto), 5¾ to 6c.; ditto out of store), 6¼ to 6½c.

SEEDS.

The market for seeds remains quiet. We quote as follows: Alsike, prepaid aboard at outside points, per bushel, $6 to $7.25; red clover, prepaid aboard at outside points, per bushel, $6.50 to $7; timothy, prepaid aboard at outside points, per bushel, [illegible] to [illegible]2.

PETROLEUM.

An advance of ½c. is noted by the Union Petroleum Co., prices being as follows: Lily White, Canadian, 18c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less. The Queen City Oil Company quote as follows: Sarnia Prime White, 18c.; Sarnia Water White, 20c.; Family Safety, 20½c. in bbls.; Pratt's Astral, 20c. in bulk.

OLD MATERIAL.

The receipts are not yet as liberal as desired, and prices are firm. We quote as follows: Heavy copper and wire, 10c. per lb.; light copper, 8 to 8½c.; heavy red brass, 9½c.; heavy yellow brass, 8 to 8½c.; light brass, 5 to 5½c.; lead, 2 to 2¼c.; scrap zinc, 3c.; iron, No. 1 wrought, $1[illegible] per net ton; No. 2 wrought, $4.50; machinery cast scrap, $15.50 to $16; stove plate, $10; malleable and steel, $6 to $6.50; old rubbers, 6½c. per lb. and country mixed rags, 50c. per 100 lb.

NOVA SCOTIA MARKETS.

Halifax, January 20, 1903.

SINCE the opening of the year the wholesale business in hardware has been extremely dull, only a very limited number of small orders being filled. Stock taking and sorting up has been the order of the day by the subordinates, while the heads of firms have been studying conditions and laying their plans for the months which are to follow and busy months, they have all good reason to think, they will be.

Travellers are now out on their routes, and good spring orders are expected to come in. No doubt, this will be the case, as the conditions throughout the country are bright and encouraging. So far the travellers report that they have been doing well, but it is rather soon after the holiday season to expect heavy business, as the country jobber and retailer seldom commence to take stock and study conditions until the new year opens, and in many cases the work is not yet completed.

The Halifax Shovel Company, which does a good business here, in conjunction with other shovel manufacturers in Canada, have made considerable reductions in their products, ranging from $1 to $2.50 per dozen. One-dollar reduction has been made in spades. The reduction on various grades and staples differs considerably, the greatest being on long handle D No 6, which is $2.50.

Linseed oil is reported at an advance in the English market, but no change has been made locally. Turpentine is firm at late advances, and there is a probability of a further advance. Paints and oils are firm, and these are also expected to advance.

To meet foreign competition there has been a reduction of 10c. in barb wire fencing, which is now quoted at $2.90 base, and 3½ to 4½c. for staples. There is a considerable demand for wire and nails, which were subject to a decline lately, and are now quoted at $2.45 base. In no former season for many years has there been so great a demand for black sheet iron. On account of the scarcity of hard coal, which is still quoted here at $8 to $9, many people had to fit up stoves for heating, instead of furnaces. For the same reason there has been a heavy trade in stoves.

Much interest is being taken in Amherst's new, or rather an enlarged manufacturing concern, under the name of The Maritime Heating Company, reference to which was made in a recent issue of "Hardware and Metal." The promoters are Knight & Black, of The Amherst Foundry Co., and D. W. Robb, of The Robb Engineering Co. They have acquired the right to manufacture the Robb hot water boiler. With increased capital, the new company will largely extend the operations of The Amherst Foundry Co.

The rolling mills at Dartmouth, though not an extensive establishment, as iron working establishments go, has done a heavy business during the past summer and autumn. A great amount of work came in to them through the wreck of the ss Grecian, three miles out of the harbor. The steamer was sold for old junk and broken up. The plates and all available iron work was put through the furnaces and re-rolled into merchantable material. It is said that this kind of reworked iron is very durable and much in demand.

MANITOBA MARKETS.

WINNIPEG, January 19, 1903.

THERE is practically no news of any kind in the hardware business this week. Trade is steady. Jobbing houses are making preparations for a heavy spring trade, and a good many are already getting out shipments, and when this is said all is said. There has been no change of price in any line to record for the week.

FOREST CITY GOSSIP.

Office of "Hardware and Metal."
London, Ont., January 22, 1903.

THERE are many people in different countries of the world who still imagine that this Canada of ours is a land of ice and snow, stumps and bears, endless forests, and Indians innumerable, living in huts in the most primitive style. A visit to this wide-awake city would soon dispel this allusion, and eyes would apen with unspeakable wonder and pleasure at the clean, bustling and up-to-date young city, which was considered an impossibility.

Neither is this young London at a standstill; its growth has been rapid, and development is everywhere in evidence; the lovely avenues, public squares, handsome churches and public buildings, as well as the magnificent and solid structures of the wholesale merchants, testify that this is a young giant, healthful, vigorous, and level-headed.

Among the branches of business here that have brought commercial repute to this city is that of hardware. There are some six or seven houses engaged ex-exclusively in the wholesale, shelf and heavy hardware trade, all of whom are a credit to Canada; any one of whom could unblushingly hold up their end in any country in the world. Jack Tar's

ASSISTANT WANTED.

Bright young man with thorough knowledge of the hardware trade, and full of bright up-to-date ideas to assist in the editorial department of HARDWARE AND METAL. State experience and present salary. Address Editor HARDWARE AND METAL, Toronto or Montreal.

phrase, "From a needle to an anchor," or, as Tommy Aiken puts it, "From a p'r cussion cap to a cannon," are words that can well be applied to the varied and well kept assortments of these amply filled warehouses.

* * *

The thousand of customers of the London wholesale hardware firms are to be found in the cities, towns and villages; away to the north, to the south, to the east and to the west, and among the numerous cross-road shops and general stores of the country, as well as the out lying places of business, in out of the way districts, where a good flourishing trade is done with the surrounding agriculturists.

* * *

There are some 31 commercial travellers, all good looking, honest and hard working, who are almost continually on the road in the interest of the hardware firms alluded to. The writer of this knows "whereof he speaks," and he unhesitatingly attests that no better bunch of men, as a whole, could be selected anywhere, who could better represent the hardware trade, in particular, and the city of London in general.

* * *

The list of manufacturing concerns in London is quite long, and those engaged in making commodities out of brass, iron, steel, wire, etc., give employment to many hundreds of men, with agents and representatives, both in Canada and the United States. In future letters, notice will be taken either collectively or separately of these, as we know that the hardware merchants of this country are a class of traders who just want such information.

* * *

Retail business here, and over Western Ontario, has been quiet since the holidays, and prices of hardware remain unchanged. Hard coal is $12 per ton; soft, $7. Lower prices are not looked for for some time.

* * *

W. B. McKenzie, of McKenzie & McLeod, coal and wood merchants, died last week.

* * *

The manager of our London office will give a very hearty shake to all outside merchants visiting the city, if they call and see him at the Hiscox Building, 365 Richmond street.

W. H. L.

RETAIL HARDWAREMEN TO MEET.

On Tuesday, February 24, a convention of retail hardware merchants will be held in Hamilton to discuss matters of interest to the retail trade. The meeting will be under the auspices of the Retail Merchants' Association. On Thursday, February 19, a banquet will be held by the hardware section of the same organization in Toronto. The following officers have the latter affair in hand: Chairman, E. R. Rogers; vice-chairman, W. E. McFarland; 2nd vice-chairman, G. Pearsall; treasurer, S. J. Casloe; secretary, F. J. Greer; general secretary, E. M. Trowern.

PERSONAL MENTION.

Mr. Fred Stork, of Fernie, B.C., was in Toronto this week doing the wholesale houses and calling upon a number of manufacturers whose lines he handles.

Mr. A. H. Campbell, of A. C. Leslie & Co., Montreal, sailed to-day (Saturday) from New York by ss. Lucania on a business trip to Great Britain and the continent.

Mr. Hugh McLaren, jr., hardware merchant, Port Elgin, Ont., paid HARDWARE AND METAL a visit at their Toronto office on Saturday. Mr. McLaren says business was never better than last year, and this year promises to be as good if not better.

CROWN LIFE.

The Crown Life's calendar partakes more of the nature of an advertisement than a calendar. The make-up of the whole sheet is, however, well worthy of a place on the wall. Around the edge appear the pictures of the directors of the company, thirty-four in number, Sir Charles Tupper heading the line as president. These pictures show up well against a red back ground. The centre of the calendar contains a statement of rates and a sample policy. "Crown Life" is embossed in gold with white edges.

HEATING AND PLUMBING

PUMBING AND HEATING NOTES.

J. H. GARDNER & BROS., plumbers, of Montreal, have dissolved, and a new partnership has been registered.

L. H. Gaudry, plumbers' supplies, Quebec, Que., has assigned.

The Sanitary Plumbing Company, of Granby, Que., have registered to do business.

Fred Stock, of Fernie, B.C., left for his home after a second visit to Toronto this week. Mr. Stock has lately placed large orders for high-class plumbing goods, such as are seldom seen in a town the size of Fernie.

Mr. Wilcox, of Doig & Wilcox, Glenboro', Man., was in Toronto this week. Mr. Wilcox, who is a progressive dealer in plumbing, steamfittings and threshing engine supplies, reports business booming in his district just now.

There is some talk of a curling match between two rinks representing the master plumbers of Toronto and an equal number of architects of that city. The arrangements have not as yet been fully completed, but a "roaring" time may be looked for when the game comes off.

Toronto master plumbers include some staunch Scotchmen in their ranks. The regular monthly meeting af their Association falls on Monday evening next, but as the Caledonian concert is to be held the same evening, the Scottish members brought the weight of their combined influence to bear, so the meeting has been postponed till Tuesday evening.

A meeting of The Canadian Heating and Ventilating Company, Limited, was held on Tuesday in Owen Sound, Ont., but at present no details are offered for publication. The institution has passed the stage of organization, however, and the building of the works is assured. Among the gentlemen identified with the new concern are several prominent manufacturers of iron and steel products, and the industry may eventually become one of great magnitude.

A NOVEL INK-WELL.

The Ideal Manufacturing Company, of Detroit, Mich., have made up one of the most unique ink-wells yet put on the market, being no less than a miniature "Ideal" low down. The bowl is white, the woodwork of oxidized bronze, in imitation of oak grain. A perpetual calendar is placed in the tank, but it may be taken out and shot put in for holding pens or a sponge. The back and floor is nickel-plated. Needless to say these are not for general distribution, but any of the trade can likely get one of them by mentioning "Hardware and Metal" to A. D. McArthur & Co., Toronto, the Canadian agents for this firm.

BUILDING PERMITS ISSUED.

TORONTO.

J. J. Fraser, pair of dwellings, near Bloor street, on Lansdowne avenue, to cost $5,000.

H. F. Squires, pair of dwellings on Beatrice street, near College, to cost $5,500; J. A. Harvey, architect.

C. H. Wilson, pair of dwellings on St. George street, near Dupont street, to cost $6,750; C. Parker, architect.

HAMILTON.

E. B. Patterson, architect, for 40 brick dwellings for The Barton Building Company Limited, to be built on Fullerton avenue, at a cost of $36,000. E. A. Depew is the contractor.

TORONTO JOINT COMMITTEE MEET

A meeting of the Joint Committee, representing the Master Plumbers' Association and the Journeymen Plumbers' Union met on Monday evening.

The principal subject under discussion was the apprenticeship question, particularly the length of time one would have to be employed before getting the tools. As an agreement was not reached, another meeting has been set for Monday, February 2, when, in addition to the matter now in hand, the new plumbing by-law will likely be taken up.

PLUMBING AND HEATING CONTRACTS.

Purdy, Mansell & Company, Toronto, have the contract for hot water heating the R. C. Presbytery, Penetanguishene, Ont.

The John Ritchie Company, Toronto, have contracts for heating 32 drying kilns for Marlett & Armstrong, Oakville; also a plumbing job for the same firm; also the plumbing for The Buffalo Tool and Machine Company, Front street, Toronto.

ACETYLENE STANDS THE TEST.

AN extended series of observations upon the hygiene of acetylene lighting has been recently carried out by M. Masi, a prominent Italian scientist, who made a number of experiments at Rome, says Scientific American. The number of appliances for producing acetylene are considerable, but in many instances their imperfections and defective construction have rendered the use of acetylene less extensive than might be, seeing that it has many advantages and is a more healthful method of lighting. According to the experiments of Grehant, Wehl and Frank, the gas has a harmful influence only upon the air when it reaches the proportion of 46 per cent., and it is only at 79 per cent. that it causes death. When absorbed by the blood in quantities not exceeding 10 per cent., it seems to combine easily with the albuminoid elements. The burner, to give a good light, should work under a pressure equal to 3 or 4 inches of water at least, and be mixed, before burning, with oxygen or an inert gas which permits it to come in contact with a great quantity of air. Messers. Lewes and Hempel have shown that its lighting power is 15 to 20 times that of illuminating gas used in an ordinary burner and from three to five times when in a Welsbach burner. M. Masi carried out some experiments in a chamber fitted up in the cellars of the Institute of Hygiene at Rome, under the most unfavorable conditions as to ventilation, so as to bring out as much as possible the effect on the respiratory organs. He observed also the intensity and steadiness of the flame, the quality of light produced, the heat and the change brought about in the surrounding air. Repeated experiments on these different points showed that acetylene gave superior results. The gas, in burning, consumes less oxygen and gives off less carbonic-acid gas and water vapor than is the case with other methods of lighting, excluding, of course, the electric light. In a confined locality it produces less heat than either gas, candles or petroleum, and it does not give rise to ammonia, nitrous acid or carbon monoxide. He considers that it does not present any more danger from explosion than gas or petroleum, and that it is cheaper for a given candle-power than all other methods of lighting.

BUILDING NOTES.

THE city engineer of London, Ont., has been instructed to furnish estimates of the cost of the new city hall for that city.

The Toronto Normal School will probably be enlarged.

Alex. McLaren proposes to erect a three storey hotel in Stratford, Ont.

Work on the new stock exchange building for Montreal will begin about May 1.

The Canadian Bank of Commerce will erect new premises for their Dundas, Ont., branch.

Contractor D. B. Whitehead has already contracted to erect 15 residences beyond Louise Bridge, Winnipeg, during the coming season.

The three English hospitals in Montreal have accepted the city's offer, and are now looking for a site for the erection in the western portion of the city of a hospital for contagious diseases.

The Imperial Bank has purchased a building site on Victoria Square, at St. John, N.B., and will erect a modern banking and office building.

The Bank of Montreal are about to spend $350,000 in alterations and an addition to their head office in Montreal, and when completed, it is expected it will be the finest bank building on this continent, if not in the whole world.

The Nova Scotia Steel and Coal Company have decided to commence at the opening of the spring the erection of 50 miners' cottages at the Big Pond slope. The company will endeavor to have the work done by local contractors if possible.

The plans for the new C.P.R. station for Winnipeg are about completed. The details were suggested by a well-known New York architect, who designed the Place Vigier, the Vancouver, and other handsome structures on the line. The design is said to be somewhat similar to that of the Place Vigier, but much more extensive.

OTTAWA BUILDERS WERE ACTIVE

The annual statement relative to building construction in Ottawa during the year recently closed has been prepared by Building Inspector Pratt. During the 12 months 172 permits were issued, and the value of the structures was $641,845. In the previous year only 397 permits were issued, but more expensive buildings were put up, the aggregate cost exceeding $1,000,000. The building done in 1902 was apportioned as follows: Solid brick, $298,345; brick-veneered, $255,300; stone, $45,500; wood, $42,700.

There were 131 local improvements, side walks, etc., made during the year, at a total cost of $136,013, while in 1901 the amount of such works was $114,839.21. In that year 173 local improvements were constructed.

ADVERTISING AND SHOP MANAGEMENT.

By H. C. W.

THE conduct of a business is in itself largely responsible for the success or non-success of its advertising. The writer has tried to show how much of good and how much of profit may emanate from the office as a source of constant advertising, and is a firm believer in the fact that every man on the floor may do his share. He will not do it if his every effort is toward getting through with the customer, throwing the goods on the shelves, growling at an extra bit of labor and breaking for the outside at the meal or closing hour, regardless of the little undone things that if done make him valuable and are more than noticeable.

PLEASE THE PUBLIC

and they'll talk to you to the extent that it is your very best advertisement. Keep giving them something new to talk of in the arrangement of your store, in taking up new lines, in handling what other stores do not handle, in getting what they want when you do not have it, in your better knowledge of their wants than the other man, in the good address of your clerks, as compared with others, in the arrangement of your stock, your showcases and your wall-cases, in the clever arrangement of your

SHOW WINDOWS,

and these latter are not the least, by any manner of means. As an advertisement. They are not equalled, and as a silent salesman, when rightly treated, every man with experience knows their worth. Overcrowding spoils them as nothing else possibly can. A few good things at a time are enough and often better only one, and that one or with all of them always the price. Price on anything, price on everything, and half the work of selling is done; sometimes all of it, for many goods are brought from your doorway, laid on your counter, the price with them, and all that is asked is the wrapping up.

BUY BARGAINS.

and let it be known you buy them; then give them just as freely. They need not necessarily be shoddy because cheaper than your neighbor's. Good, sound judgment will lead a man right in what he buys as in anything else. Bargain counters need not in any way partake of the 5 and 10 cent stores or the department store. They may be made up in part of stock not saleable at a full or a present value, and the fact that you are known to have them is certainly a long card and a strong card in advertising that costs you less than any other class.

TAKE A TRIP.

Get out occasionally to other towns and other stores; see how other merchants do business. No one of us has it just right, and I doubt not each one of us can learn enough to justify the time and expense of going. Then the knowledge that you go and that you improve each time is in itself a clever advertisement with a much larger class of people than is dreamed of. People like to patronize merchants who are up-to-date and willing to learn.

HAVE YOUR CLERKS POSTED.

Have them know all about the goods they seek to dispose of; who makes

JOHN LOUGHRIN

Main Street, Mattawa.

Shelf and Heavy Hardware

Cooking and Heating . . . **STOVES**

Builders' Hardware.

Edged Tools a Specialty.

Camping Outfits, Guns, Rifles, Ammunition, Fishing Tackle and Sporting Goods of all kinds. Household Furniture, Paints (mixed and dry), Oils, Varnishes, Kalsomines and Brushes of all descriptions, also manufacturers of Tinware of all kinds. Metal Roofing particularly attended to.

A SAMPLE AD.

them, where made, how made and of what material. Nothing so attracts a prospective buyer as to find a salesman who is able to talk to him in this way. No one thing will drive him out so quickly as to drop on to the fact that he is a paid ignoramus on the subject. In a tool department it costs but little time to know the mechanism of a ratchet drill, a chuck or a wrench, or in the sporting-goods corner to know—and be able to tell it—the inner parts and construction of one make of gun as compared with another make; and every customer leaving your store is bound to speak of the cleverness of this man.

RETURN THE MONEY

and without argument, when goods are brought back as unsatisfactory. It is a little bit hard to do it with a smiling face, to see it go back after having once owned it, and yet that one thing has founded the fortune of some of the best merchants this country knows to-day. We may occasionally be imposed on, but even the imposter will talk of it. If it is not done pleasantly the man is ever after your enemy; so is the woman. And the damage done in their repetition of the deal cannot be estimated. On the other hand, the pleasant return and the "come again" is just as liable to bring dozens as the one interested, and your advertisement is made.

YOUR CUSTOMERS

are your best advertisers always. It is sometimes pretty hard to get this fact through the heads of employes, but it is as true as that the sun rises.

Treatment of children.—Have you noted how much a stir is created at the perhaps unintentional injuring of a child's feelings, or the rude neglect because it happens to be a child? Do you know the woman doesn't live who ever forgets or forgives an injury at the hands of employer or employe? Years after you will hear of it through the medium of some near neighbor to whom she has gone with her woe.

Courtesy.—It is an awfully safe rule and a splendid advertisement to never for a moment allow argument or dictation with a customer, to ever and always treat the child with courtesy and kindness and insist on having it done, and, in fact, to yourself set the example of being a gentleman always

YOUR COMPETITOR

should be your friend. If he will not then perhaps you cannot, but it's wise to do our best to that end. Enmity at least need not be created as far as you are concerned. There is no question but that both can do more business, can make more money, when on good terms than the reverse. There is no question but that a friendly state of affairs permits exchange of favors that never come in its absence. But if it must be and he must talk of his neighbor, it's a pretty good advertisement for the other man that he keeps quiet. He rather has the best of it, and as most people will learn the truth, he is also getting a good deal of free advertising. A man who can keep on good terms with his neighbors and competitors is a pretty safe man to buy goods of.—Iron Age.

Canadian Representative: ALEXANDER GIBB, 13 St. John St., MONTREAL.

75 YEARS. ESTABLISHED 1825. 75 YEARS.

NEWFOUNDLAND PROSPEROUS.

"A WAVE of prosperity is sweeping over the Island of Newfoundland," said Mr. F. J. Hunter, manager of the Bank of Montreal, at St. John's, Nfld., to a Halifax Chronicle reporter on Saturday.

"The business of the Island is in a very healthy condition," he said, "but the price of codfish, the chief staple product of the country, is lower than it has been for many years previous, which, of course, has the effect of curtailing circulation to a very large extent. Prices, also, of this staple in the foreign markets have been extremely depressed, necessitating the holding of fish by the leading exporters for higher prices, both in the markets of the Brazils and the Mediterranean.

THE HERRING FISHERY.

"The herring fishery on the West Coast has been a good one, and it is estimated that American buyers have left $200,000 in gold with the people along the Coast for these fish.

"The lobster fishery is up to the standard, and the prices are exceptionally good. Cod and seal oils have averaged good prices, as well as seal skins."

Mr. Hunter said the feature of the latter was the export to the United States of these skins, instead of only to England, as formerly. Good prices are obtained for these skins, which are used for patent leather, bicycle saddles, etc.

Speaking of the local manufacturing business, Mr. Hunter said they are all doing exceptionally well, and paying handsome dividends. He referred particularly to the manufacturing of boots and shoes, and to the Cordage Company.

THE HAY-BOND TREATY.

Asked as to the feeling regarding the Hay-Bond treaty, Mr. Hunter said: "The feeling of the people of the Island is undoubtedly for the treaty, and the merchants are, without exception, apparently in favor of it. Though the people are in favor of the treaty, they are among the most loyal in the British Empire." He referred to the Newfoundland naval contingent as a splendid body of men, and said that they were now serving under Commodore Montgomerie, on H.M.S. Charybdis, in Venezuelan waters.

"The revenue of the colony during the past year has been the largest on record," said Mr. Hunter. "It is interesting to note that the total value of the imports and exports for the past year had reached the handsome sum of $17,000,000.

THE LUMBER INDUSTRY.

"The lumber business is growing in importance, and forging ahead by leaps and bounds. American capitalists, as well as Canadians, seeing the large area of virgin forests, are purchasing lands and developing on every quarter. So far, the leading lumber interests are owned by The Louis Miller Co., Limited, of Crieff, Scotland. This company expects to have an almost immediate output from its various mills of 40,000,000 feet per annum."

Mr. Hunter said the mineral wealth of the colony was very great, and that the mining of iron, pyrites, and copper, was being pushed in all directions. The iron mines at Bell Island and The Cape Copper Company's properties are being extensively developed. Slate mining, he said, is also being largely developed. This slate is of as good quality as can be found in Wales, and in the course of time will be a valuable adjunct to the exports of the Island.

THE REID SYSTEM.

"The Reid Newfoundland Company are gradually perfecting their vast system of enterprises, and by degrees are getting their system into the same unexcelled shape as the C.P.R. The company's very handsome stone passenger station, for the west end of St. John's, is completed, and their large staff will move in next month.

"The sealing fleet is being prepared for the fishing in March, and it is expected that the usual large catch will be brought in."

Mr. Hunter has been stationed at St. John's for seven years, and he says the people of the Island are of an exceeding kindly disposition, and welcome strangers to their shores, to whom they are in every respect most hospitable. Mr. Hunter is now on his vacation, and this morning he will leave on a trip to the Southern States.

OFFICERS OF NEW YORK MERCHANTS' ASSOCIATION.

A meeting of the board of directors of The Merchants' Association of New York was held on January 16 at the office of the Association to elect officers and organize for the ensuing year. The personnel of the board was somewhat changed at the annual meeting of the members held on the 13th inst. It is now constituted as follows: Wm. F. King, John C. Eames, W. A. Marble, Gustav H. Schwab, D. Le Roy Dresser, Geo. F. Crane, Adolph Openhym, Geo. L. Duval, Geo. Fredk. Victor, Herbert L. Satterlee, Henry R. Towne, Frank Squier, J. Hampden Dougherty, Clarence Whitman, and Clarence W. Seamans.

D. Le Roy Dresser, the president of the Association, tendered his resignation as president, being unable to devote his time to the work of the Association owing to pressure of other business. The following officers were elected for the ensuing year:

Clarence Whitman, of Clarence Whitman & Co., president.

Gustav H. Schwab, of the North German Lloyd S.S. Co., first vice-president.

John C. Eames, of The H. B. Claflin Co., second vice-president.

W. A. Marble, of the R. & G. Corset Co., secretary.

Geo. L. Duval, of Beeche, Duval & Co., treasurer.

The Algoma Supply Company, general merchants, Sault Ste. Marie, has assigned to D. I. Millar; a meeting of creditors will be held on January 22.

APOLLO BEST BLOOM
GALVANIZED IRON

Galvanized iron ought to be soft flat uniform true to gauge.

Apollo is guaranteed to be so.

American Sheet Steel Company, New York

53 Sulpice Street
Montreal

ROYAL-CANADIAN

is H. Boker & Co's. best concaved plain Razor. Finest Quality without waste on fancy work. Lowest price for the very finest grade of goods.

The brand is registered at Ottawa.

For sale by all Leading Wholesale Houses.

CURRENT MARKET QUOTATIONS.

January 23, 1903

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

TRADE MARK

The "Burgon" Patent Sheep-Shearing Machine

TRADE MARK

W WIL KIN SON

is made throughout of highest quality material in conjunction with correct mechanical principles. Will clip a sheep in three or four minutes, and get about 6 oz. more wool than with the old-fashioned Hand Shears. One of the chief objects of our machine is simplicity in construction; every part is interchangeable, thus ensuring satisfaction. The machine is driven by a flexible steel core fitted with universal joints. Will run in any position, and will not burn or break like gut. The Combs and Cutters are made of the finest steel, every one being properly hardened and tempered so as to retain a sharp, keen cutting edge. These can be resharpened and made equal to new in the conrse of a few minutes. You hold the sheep the same as for Hand Shears, the machine does the rest. Can be used for clipping horses by using a differently constructed head.

Progressive Merchants

Know the advantage of getting for their customers the most modern and improved machinery or goods to do their work cheaper and give better and more permanent results.

It is clearly evident that **FIELD WOVEN COILED SPRING FENCE** gives the best satisfaction, and **LONDON FENCE MACHINES** are by long odds the most improved, most rapid and most complete field weaving machines in the world. It is a surprising fact that it costs less to stretch and weave a rod of fence in a field with a London than to do it in the factory, and the fence is also better value by 25 per cent.

London Fence Machines will sell more wire for you and the two are more profitable than ready-woven fencing.

Our line is well advertised and we offer liberal terms and exclusive agency.

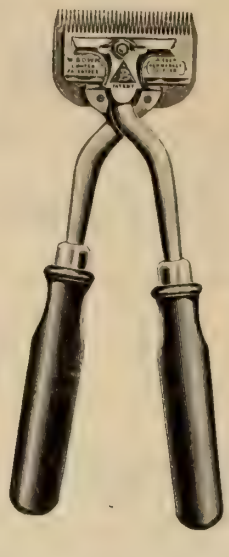
BOWN'S "NEWMARKET" Clipper.

PATENTED 1874.

The King of Centre-Adjustment Clippers still remains unsurpassed after a run of nearly THIRTY YEARS



The Improved B. PATTERN "NEWMARKET" may now be obtained from all jobbers.

Detachable Plates.
Improved Cap with Long Bearing.
Rigidity and Easy Running.
Accurately Machined and Perfectly Fitted.

All Parts Interchangeable.

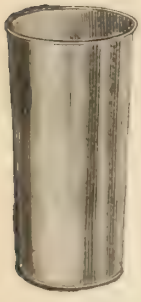
MANUFACTURED SOLELY BY

BURMAN & SONS, LIMITED

BIRMINGHAM, ENGLAND.

Supplies for the Maple Syrup Season.

Sap Buckets . . .



—EXTRA DEEP AND STRAIGHT.
—THREE SIZES.

They possess many advantages over the ordinary flaring Buckets—being small in diameter they do not catch the rain or snow, and as they are very deep, they hang perpendicularly, and consequently will not overflow until full.

—Covers supplied if required.
—They nest close for shipping or storing.

We can also supply the ordinary Flaring or Western Sap Pails.

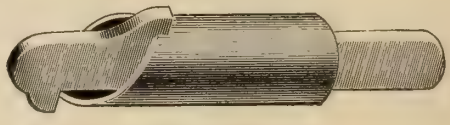
E. T. Sap Spouts.

MADE OF RETINNED STEEL—STRONG AND DURABLE.

Only require a ⅜-in. hole in tree.

It does not cover the inside surface of the hole; therefore a larger amount of sap is obtained.

Packed in card-board boxes.



Maple Leaf Sap Spouts.

Made in Bronzed Steel.
Require a ½-in. hole.
Has a shoulder which prevents it being driven in too far.
The hole in the tree is not exposed to wind and snow; consequently, sap will flow longer.
Packed in card-board boxes.

Syrup Cans, round or square.

Plain or decorated. Made in ¼, ½, and 1 gallon sizes.
Either Wine or Imperial Measure.

A full stock carried in all lines; orders shipped promptly.

HARDWARE AND METAL

VOL. XV. MONTREAL AND TORONTO, JANUARY 31, 1903. NO. 5.

COMMENT ON CURRENT TOPICS.

THE Alaska boundary question is 78 years old, and it is time Great Britain and the United States had sense enough to settle it. The one is older than Methuselah and the other has seen a century and a quarter.

* * *

Quite a little energy is being developed in Ontario over the question of electric power. But then the development of energy is one of the offices of the electric current.

* * *

Blunders on the part of railway officials there always will be. And what is wanted more than anything else, as a guarantee for the safety of the travelling public, is a mechanical device that will put an effectual check on these blunders.

* * *

It is now claimed that sugar can be made from sawdust. This will encourage us to "saw wood and say nothing."

* * *

Regrettable unpleasantries are surrounding the attempt of Great Britain and Germany to compel reluctant Venzuela to pay her debts. And Germany, with both the press of Great Britain and the United States slinging mud at her, seems particularly to be having a bad quarter of an hour. But a policeman's lot never was a happy one, particularly when duty assigned him to the collection of debts.

* * *

The Toronto News speaks of Hugh Blain, of Eby, Blain & Co,, Limited, as "Mr. Hugh Blain, M.P." Mr. Blain is not an M.P., but he ought to be, and The News is possibly so convinced of this that it inadvertently tacks on the abbreviations that he would wear if his presence indeed graced the House of Commons.

* * *

The fast Atlantic steamship line is that which the slow-acting politicians have been wrestling with for a decade or more.

* * *

An assemblyman in Albany has introduced a Bill compelling packers to date their canned goods. The same old mania. The same old display of ignorance. And some member in the Canadian House of Commons is almost certain to have a similar attack.

* * *

Canada is developing so rapidly these days that it is possible she may eventually enclose within her borders that part of the United States known as Alaska as well as that part lying south of the 49th parallel.

* * *

The opinion obtains that while a good many of us are going short on coal the pockets of the dealers are getting long.

* * *

There is a suit of Stone versus Brooks before the Toronto Assize Court. Evidently the old case of brooks running over stones.

* * *

Complaints are still coming from the Northwest regarding the grain blockade. By-and-bye we shall be having a blockade of complaints. And what then?

* * *

The ranks of those in the United States opposed to ratification of the treaty with Cuba have been strengthened by the addition of the British Government thereto; an alliance of defence and defiance as it were. And the latest news from Washington is to the effect that the allies are likely to come off victors, for the time being at any rate.

* * *

The petition and cross-petition in the North York election case has been dismissed, neither party having any evidence to offer, as, of course, per arrangement. And thus again has the public got what is known in sporting circles as the "double cross."

* * *

Canada does not appear to be at all perturbed over the fact that she is at war with Venezuela. And as long as Jack Frost is on guard there is no danger of the enemy's gunboats ascending the St. Lawrence and entering the Great Lakes, bombarding the chief cites en route.

* * *

If railway accidents keep multiplying during the next few months as they have during the past few weeks, nervous travellers will either take to dirigible balloons or stage coaches.

* * *

Three large locomotive companies in Scotland have amalgamated with a capital of $10,000,000. They will now be able to get up steam and go ahead, while it is no doubt intended that competitors shall be forced off the track.

* * *

The chief danger about the bombardment of the Venezuelan fort by the German gunboats is that damage might be done to the sacred Monroe Doctrine. It is a valuable national asset, and if it were cracked Uncle Sam would feel as bad as would an old maid over the smashing of a piece of pet china.

* * *

Strong measures for meting out adequate punishment for all sorts of political

corruption will be found when public opinion is strong enough to demand the desideratum.

* * *

When the bar congratulates a lawyer on his elevation to the bench it does not follow that drinks are taken over the bar.

* * *

The Alaska boundary question got beyond the bounds of common sense some time ago.

* * *

The manufacturers of rubber goods are trying to get increased protection. In other words, they want the tariff stretched. It is only natural that the tariff on rubber should be elastic.

* * *

The Toronto Street Railway Company have hit upon a new fuel economizing scheme on their cars. The chimney on each car is fixed so that the draft goes down instead of up. At the same time improper language is drawn from the shivering passengers. But that does not bother the company, for corporations have no souls, and consequently will have no account to render in the next world.

CATALOGUES, BOOKLETS, ETC.

DOMINION OILCLOTH CO.

THE calendar presented this year by the Dominion Oilcloth Co., Limited, is large and striking. Unlike many calendars, prominence of the date sheet is not sacrificed to the advertisement. The figures are distinct, and therefore the calendar is useful for the office. The advertisement consists of a half-tone engraving of the factory, surrounded by a wreath of maple leaves in green and red. The background is a bright yellow and the firm's name appears in red with green shadings.

A NEAT NOTICE.

A copy of the notice of the Kentville, N.S., Board of Trade meeting for January 31, 1903, has been sent to us by M. G. DeWolfe, ex-president of the Maritime Board of Trade. It is very neatly gotten up, and does credit both to the directors of the Board of Trade and to the press of the town of Kentville. It might be copied with advantage by larger Boards of Trade than that of Kentville.

BUSINESS MAN'S CALENDAR.

The calendar of Alex. McArthur & Co., manufacturers of tarred felt, Montreal, is a useful one for a business man. Each sheet gives space to three days, with blank spaces opposite the dates for memos. or remarks. Only the business days are recorded on this calendar, Sundays and general holidays not being marked.

BUSINESS CONDITIONS IN BRITISH COLUMBIA.

"TRADE conditions in British Columbia have been satistfactory during the past year," said C. L. Lightfoot, manager of the Gurney Foundry Company's Vancouver branch to HARDWARE AND METAL on Tuesday. "The outlook, too, is promising indeed. Trade is now of large volume, and done along legitimate lines; our business men have been careful and have bought wisely.

"The day is not far past when trading in British Columbia was unstable; many of the retailers were imbued with a mania for speculation, and spent as much time in thinking of and looking after their 'holdings', as they did in minding their regular business. Once buying was frequent, and there was altogether too much changing about. Sometimes a town would spring up in a few months, and then when merchants were catering to the various wants of the people there would be a sudden departure of population, and the merchants would have to move after the trade.

"To-day business is much the same as as in the older sections of Ontario. With the exception of the lead mining industry of the Slocum the industries of the Provence have settled down to solid business and steady expansion.

"The Provincial law prohibiting the exportation of boys has been of great benefit to lumbering interests, just as seems to have been the case in Ontario. Several Seattle mills have comeo ver to British Columbia. Immense plants have been installed in and about Vancouver. The result has been that better lumber and shingles are being made, and the industry is prospering in every way.

"The fishing industry is largely in the hands of the syndicate, which can be depended on to keep it on a steady, solid basis, though, of course, the catch varies from year to year.

"The mining interests are in satistactory shape. At Nanaimo, Comox and Fernie soft coal is being produced in ever-increasing volume. At Canmore anthracite, not equal in quality to Pennsylvanian coal, is mined. The soft coal is in general use for fuel, and plays the mischief with the fire-box.

"Where soft coal is used cast-iron stoves are in general demand, but in the interior towns, where freight has to be carried many, sometimes hundreds, of miles by waggons, steel stoves and ranges are insisted on. The reason is the danger of breakage and the heavy cost of transportation. For instance, to reach Princeton a stove has to go 60 miles on a waggon, and at a cost of $3 a pound. A railway through the district would be a great property, for it would open a grand coal-mining and agricultural country.

"There is, by the way, a railway in prospect. The Coast-Kootenay railway has received a charter to construct a road from Vancouver to Midway, but I do not know what the promoters are doing in the matter now. The rank and file of the people are opposed to land subsidies and public opinion forced to withdrawal of a generous grant to Mackenzie & Mann, which had almost gone through the Provincial House.

"The most vital question before the people of British Columbia to-day is the lead-mining industry. Remember first that the total population of the Province is not greater than that of Toronto ; as the lead-mining industry would, if properly protected, give employment to 1,000 men, many of whom would be married, you can understand the importance to residents of British Columbia of this question. If the labor of 1,000 men in Toronto were dependent on Government action you can realize how powerful the agitation would be to secure that measure.

"The matter is one of importance to the manufacturers and business men of the Dominion, too, for if the employment of an additional 1,000 men gave an impetus to business in British Columbia the influence of the same would be felt in every part of Canada."

The afternoon of January 19 saw the opening of the C. N. R. tile elevator at Port Arthur, when the first stream of wheat was poured into one of the eighty 20,000-bushel tanks. Although the building is not entirely completed, the storage of wheat can be steadily carried on until 2,000,000 bushels have been put away. The elevator is fireproof. It is built altogether of tile, steel and cement, even to the room and foot walks about the tanks, which are laid on steel supports.

BUSNESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

A. J. CHARBONNEAU, general merchant, Arnprior, Ont., has assigned, and a meeting of his creditors will be held on February 2.

A. Methot, saddler, St. George East, Que., has assigned.

Mitchell Bros. & Co., general merchants, Arthur, Ont., are offering to compromise.

E. H. Breckinridge, general merchant, Aylmer, Que., is offering to compromise.

E. Germaine, general merchant, of St. Bazile, Que., has assigned to V. E. Paradis.

Palmer Bros., general merchants, Bedford, Que., have assigned to J. McD. Hains.

Roussin & Frere, carriagemakers, Montreal, have assigned to Marcotte & Marcotte.

Oct. A. Verette, general merchant, St. Scholastique, Que., is offering to compromise.

Morrison & Co., general merchants, of Bella Colla, B.C., have assigned to Wm. H. Little.

A meeting of the creditors of Parker & Co., general merchants, Hawkesbury, Ont., was held on January 27.

The meeting of creditors of Sheridan & Co., general merchants, Beeton, Ont., has been adjourned to February 3.

A meeting of creditors of J. T. Donovan, general merchant, of Casselman, Ont., was held on January 22.

A meeting of the creditors of Thomas McKissock, contractor, Sault Ste. Marie, Ont., will be held on February 2.

George W. Helwig, hardware merchant, Hanover, Ont., has assigned to Henry H. Miller; a meeting of creditors will be held on February 1.

Ambrose L. Fisher, seed merchant, of Brockville, Ont., has assigned to George A. Dana: a meeting of creditors will be held on February 2.

James Knight, blacksmith, Caledon township, Ont., has assigned to Joseph J. Kelly, and a meeting of his creditors will be held on January 31.

T. J. Mayhew, general merchant, of Thamesville, Ont., has assigned in trust to C. B. Armstrong: a meeting of creditors will be held on February 2.

PARTNERSHIPS FORMED AND DISSOLVED.

E. E. Taylor, general merchant, Crofton, B.C., is admitting J. M. Neal into partnership.

Brownstone & Steinberg, general merchants, Rosenfeld, Man., have dissolved partnership: Mr. Steinberg continues.

McKenzie & Benson, agricultural implement agents, Strathcona, N.W.T., have admitted R. T. Purvis to partnership.

Alex. Anderson, hardware merchant and agricultural implement agent, Saltcoats, N.W.T., has admitted H. R. Smith to partnership.

Six Big Varnish Specialties

The Sherwin-Williams Six Big Varnish Specialties are six big sellers. They are splendid representatives of a full line which we have selected to be pushed as energetically and thoroughly as we know how. You know what that means. They have each proved of big selling value; they are goods for which the painter has frequent use; they are right in quality and right in price.

KOPAL — For general use, outside and inside. A good, honest varnish at a popular price.

MAR-NOT — A durable floor varnish. Has a tough, elastic wear-resisting surface.

Excello — An inside rubbing and varnishing and polishing varnish of exceptional value.

DRY-O-NITE — The master painter's dryer. It mixes perfectly with linseed oil without curdling or separating.

DURABLE SPAR — For marine use and all outside work that must withstand severest exposure.

SHELLACINE — A liquid wood sealer for first coating on interior wood work. Effects exceptional. A trade winner.

We have begun a systematic and vigorous campaign to introduce these products to every painter and decorator on the continent. Our plans include a free distribution of samples, direct advertising, and special helps for the dealer.

If you haven't these goods on your shelves, write us for prices and further information. Do it to-day.

SALES MADE AND PENDING.

H. H. Mann, general merchant, Shetland, Ont., has sold out to John A. Williams.

M. McGuire, agricultural implement agent, Dresden, Ont., has sold out to R. Brewer.

Freeman Bros., general merchants, Freeman, Ont., are advertising their business for sale.

George Brasher, general merchant, of Tillsonburg, Ont., advertises his dry goods stock for sale.

The stock of John McBean & Company, general merchant, Georgetown, is to be sold on February 4.

The stock of H. C. Mass, estate of, hardware merchant, Toronto, is advertised for sale by auction.

The assets of J. T. Donovan, general merchant, Casselman, Ont., are to be sold by auction on February 3.

J. A. Kerr, hardware merchant, Regina, N.W.T., has sold out to The Western Hardware Company. Possession, February 1.

The stock of Dodgson Bros. (estate of), general merchants, of Duart, Ont., is advertised to be sold by auction on January 27.

NEW FIRMS AND CHANGES.

The Canadian Broom Company has commenced business in Ottawa.

J. J. Frith, blacksmith, Boissevain, Man., has been succeeded by Black & Lothiam.

G. L. Nicholson, general merchant, of Riceville, Ont., has opened a branch at Copper Cliff.

Parke & Hutton, agricultural implement agents, Medora, Man., have been succeeded by W. H. Dandy.

Parke & Hutton, agricultural implement agents, Napinka, Man., have been succeeded by W. G. Hicks.

DEATHS

L. A. Noecker, of Noecker & Son, hardware merchants, Drayton, Ont., is dead

RESPONSIBLE FOR WIFE'S PURCHASES.

JUSTICE DAVIDSON delivered an important judgment in Montreal last week regarding the responsibility of a husband for goods ordered by his wife. The suit was brought by J. V. Calcutt, importer, against C. L. Tiffin, alleging that the latter ordered a quantity of household linen worth $1,325.86, to be manufactured specially in Ireland; the goods being now here and ready for delivery.

Mr. Tiffin stated that the goods had been ordered by his wife, from whom he is separated as to property.

It was shown that the order had been sent to Ireland, subject to further orders as to size of cloth, etc. Six months or so afterwards the plaintiff wrote to Mrs. Tiffin inquiring when she wanted the goods delivered. When they arrived they were entered to the debit of her account.

The defendant went with his wife to order the goods. He gave some directions concerning them, and gave his cheque for a previous account. He promised to pay for the goods, and when they arrived said the house was not ready for them, but promised to call.

His wife called on Mr. Calcutt and asked him to store and insure the goods, according to instructions from Mr. Tiffin. When legal proceedings were commenced Mr. Tiffin wrote to say that as his house was not ready for occupancy, he could not have the goods ordered by Mrs. Tiffin brought into it, and that he did not feel bound to pay for them until the goods had been received by him and checked over by a linen expert.

This letter the judge considered to be a formal and explicit recognition of personal liability. The defendant was well known to be the heir of family estates, while Mrs. Tiffin was not yet a resident of Montreal, and her personal means did not justify a purchase of this kind. The court, therefore, considered that the goods were sold on the personal credit of the defendant, Mr. Tiffin.

Another fact tended to fix the responsibility on Mr. Tiffin. He was married in New York State, where he was separate as to property. But the judge pronounced that community of property exists here, as Mr. Tiffin had not proven the foreign domicile which is a precedent to invoking this foreign law. With this fact in view the judge held the defendant responsible even though his wife had made the purchase in person.

The Kennedy Hardware Company, of Toronto, have obtained a charter.

MACHINERY

BRITISH MACHINERY TRADES.

IN a comprehensive review of British trade conditions, taken from the Board of Trade statistics, The British Trade Journal says: "Probably the most notable feature of the year in technical engineering has been the progress made in the application of electricity for public and industrial purposes. Most of our cities and towns have now their electric lighting and tramway systems in full operation, while the latter are being continued well into the country districts surrounding industrial centres, and numerous schemes are on foot for tramways or light railways, arranged with a view to acting as cross-country feeders to the main railway and tramway systems for both passenger and goods services. Electricity as a means of power transmission is also daily becoming more highly appreciated in works and factories. We are unable to discover any very marked alterations in the methods of generating and distributing electricity. The high-tension multiphase current system appears to gain favor generally, but there are indications that more care is now taken than formerly to deal with each particular scheme on its merits, and to adopt whichever system is best suited to the conditions prevailing in each locality. There is a tendency also in generating stations to prefer large units of high power rather than more numerous and smaller-sized units. Some impetus has been given to the multiphase power distribution system also by the fact that certain master patents, which have hitherto made it something of a monopoly, have lapsed.

"Probably the most important advances of the year have been in connection with the production of cheap gas and its application for motive-power purposes. It may be taken as a generally admitted fact that the gas engine is more efficient in converting heat into work that the steam engine, but it is only comparatively recently that gas engines of large power have been successfully constructed. We are convinced that the gas-producer and engine are destined to replace the steam boiler and engine to a very large extent in the near future.

"It may be taken for granted that for underground railways the steam locomotive has had its day, but, perhaps, the most significant innovation has been the decision of two important railway companies to electrify portions of their lines. Although no actual progress in construction has been made in connection with the Manchester and Liverpool mono-rail line, we believe that all preliminaries are now complete, and that a start is to be made very shortly, while other schemes of a like nature are well advanced.

STEAM MOTORS.

"In steam-engine installations for land work, while there have been no revolutionary changes, steady progress has been made in the direction of increased efficiency and in details for labor saving. Although boilers of the water-tube type—the Babcock, Stirling, and Climax, are instances—are more largely used, and are entirely successful, those of the Lancashire type are still the prime favorites. The use of the superheated steam as a means of attaining superior economy in high-class installations is likely to become general, and in the present state of knowledge, appears to offer the best opportunities for improvements in steam-engine efficiency. Experience has shown that we have nothing to fear from America as the result of the Glasgow Electricity Department's experiment. We understand that both the Musgrave and Allis engines are working well, but, on the whole, according to the opinions of the most reliable experts, the former are by far the better job.

LOCOMOTIVES.

"It is gratifying to note that our forecasts in regard to our supremacy as locomotive builders have been fulfilled. Certain pessimists freely expressed the opinion two years ago that we were rapidly losing ground in this department, that our foreign and colonial trade was already undermined, and that ultimately home railways would purchase most of their engines abroad. We find instead that British-built locomotives were never so universally esteemed as they are at the present time. Colonial railways having given a trial to American and German engines, are practically unanimous in preferring the British productions. India and Egypt have been excellent customers during 1902, and at the close of the year a most important Japanese contract has, after keen competition of the leading American and German firms, been placed in Scotland, and we hear that the Scotch tender won the day in regard to both the quality of the work offered and the lowness of price.

OTHER MACHINERY.

"Our exports of agricultural engines and machinery to European countries have been about normal, but to the colonies, especially South Africa, they have increased considerably. Exports of textile machinery, on the other hand, show a general decline; and there is perhaps no branch of the engineering trade in which prospects are so clouded as in this one."

SOMETHING ABOUT VANADIUM.

CHARLES A. BRAISLER has translated for The American Manufacturer an article on vanadium, recently published in The Journal de l'Electrolyse, which authority declares that if this little-known metal be added to steel, even in such minute quantities as three tenths or five-tenths of 1 per cent., it confers upon it most remarkable qualities. The coefficients of resistance of both iron and steel, under all conditions as of concussion, compression or elongation, are raised from single to double their value by the addition of vanadium; at the same time, its presence renders steel so hard that the union of all these new qualities warrants the reduction of armor plates to half their ordinary thickness. It is indeed difficult to admit that the presence in an alloy of iron or steel of one-third or one-half of one per cent. of any element whatever could have such an intensifying effect and at the same time be so general, which effect is explained by the extreme affinity, under certain circumstances, which vanadium has for oxygen.

This affinity is so powerful that if vanadium, even infinitesimal quantities, be

present in a bath of steel in a state of fusion, it will lead to an immediate and absolute reduction of every trace of iron oxide existing in the mass. To these traces of iron oxide in steel prepared with the utmost care, and inevitable without the use of vanadium, is attributed the tendency of steel to crack and rupture.

A singular characteristic of the vanadium steel is that it does not acquire the maximum hardness through tempering but by reheating to 700 or 800 degrees Cent.

A variety of consequences occur from this, as, for example: A planer, of which the cutting tool was made of vanadium steel, was set to work at its full capacity as to velocity and power. In a short time the tool began to warm, it even reached a red heat, yet it continued to take off the same chips of wrought iron or castings without showing the least effect from the intense heat. It is scarcely necessary to remark that in such a case a tool of ordinary steel would have completely lost its temper and cease to further cut the casting.

HOW TO GET RESULTS.

"THE more hurry the less speed." Such runs the old saying, but the world has come to learn that speedy results are gotten from a systematic hurry, when each moment is filled with some activity, either by brain or body, if not of both together. For the machinist or metal worker, the following rules for making haste are well worth pasting up:

1. Do nothing that you don't have to do. Cut out the non-essentials.

2. Don't hesitate. Begin at once. When you are through, stop, and begin on the next thing.

3. Don't be too particular what part of the job you begin with. Other things being equal, do what is under your hand first, and the next nearest thing next.

4. Don't pause between jobs.

5. Don't go from one job to another until the first is done. Do one thing at a time. It takes time to change your mind.

6. Do your thinking while you are acting, and think about the work now in hand.

7. If you have assistants, use them. At first, do only what they can't do; afterwards, help them out.

8. Do nothing twice. This makes it necessary to do it right the first time.

If you follow these rules and a few more that you can make yourself, you will be able to reduce your working hours about one-half; you won't think you are hurrying; you won't be bored and worn out by your work, and when it is over you can go home and romp with the baby with an approving conscience and a mind at rest.

MACHINERY AND ELECTRICAL NOTES.

THE Canada Corundum Company, of Toronto, Can., have started work on a new mill and the development of waterpower, their intention being to erect a plant with a capacity seven to eight times that of their present mill. It will be well on to the summer before the new plant will be in proper working order. The greater portion of the company's produce is marketed in Canada, the United States and Germany.

The P. R. Cumming Manufacturing Co. Clarksburg, Ont., will instal machinery in a new sawmill shortly.

The main belt and a large flywheel in O. & M. McVean's sawmill at Dresden, Ont., was broken last week.

A 40-horse-power centre-crank engine has been shipped by H. W. Petrie, Toronto, to Jno. Edgley, Bellamy, Ont.

A 45-horse-power boiler and engine was purchased from H. W. Petrie, Toronto by J. E. Ryckman, of Simcoe, Ont.

The Ross Rifle Company are building a factory in Quebec and will put in enough machinery to give employment to over 200 men.

James Gillies, Galt, Ont., intends extending his planing mill and will instal machinery for the manufacture of sashes and doors.

A. F. Dick, Brampton, Ont., has installed a five-horse-power vertical gas engine. This machine was furnished by H. W. Petrie, Toronto.

J. P. Mabee, K.C., and Geo. Wettlanfer, of Stratford, Ont., and others are interested in a proposal to establish a malleable iron works in Stratford.

A fine tool in the shape of a 21-inch x 12 ft. engine lathe was installed in the plant of Madison Williams, manufacturer of water-wheels at Port Perry. This lathe was purchased from H. W. Petrie, Toronto.

The Hanbury Manufacturing Co., of Brandon, Man., are spending $20,000 on the equipment of its new factory. Mr. Clark, of this company, has just returned from making purchases in the United States and in Galt, Ont.

A London, Eng., despatch says that the Scottish locomotive builders have practically completed a combination of the trade in Scotland, the object being to fight German and American competition in foreign markets.

Work on The Montreal Locomotive and Machine Company's factory will be started shortly, says a despatch. It is estimated that 100 locomotives will be built during the first year. E. P. Brophy, of Ottawa, will be managing director of the company, and R. T. Shea, of The Schenectady Locomotive Works, will be superintendent.

A Worcester, Mass., despatch says that a $10,000,000 combine of emery-wheel manufacturers is being planned. Twenty large concerns in different parts of the United States have been asked to join.

Samuel Hollander intends to erect a new machine shop in Vancouver. The building will be 40 by 100 feet, two-storeys and attic. On the ground floor will be a machine shop, 60 by 40 feet and a foundry 40 by 40 feet. The second floor will be fitted to accommodate lighter machinery, and a moulding and pattern department. Mr. Hollander wants to be able to start operations within two months.

SOLDERING ALUMINUM.

AS a result of many inquiries for an effective method of soldering aluminum, The Metal Worker submitted an inquiry to the large aluminum manufacturers of the United States, asking their opinion. The general verdict has been that no such solder has yet been discovered. The following answer, from The New Jersey Aluminum Company, Newark, N.J., is typical. "We do not recommend any aluminum solder that we have seen up to date. The principal difficulty lies in the fact that aluminum, when soldered, will often show itself very strong in the early stages, such as from one day to probably one month. Then it seems that galvanic action sets in, which releases the solder from the aluminum. We have recently seen wares that have been soldered for six months and which were apparently still as good as when first done; but, in practically every case the parts would fall asunder in two or three weeks thereafter. The action seems to be quite sudden when it takes effect. There is a demand for a good aluminum solder, but the only way that this can be proved is to put it into practical use for one or two years. Our idea of the situation is, that unless the metal can be furnished in a purer state than is now the case, soldering will always be impracticable. Silicon seems to be one of the principal impurities. It renders the metal greasy. If it could be eliminated the difficulty of soldering aluminum would be materially reduced."

AMERICAN ENGINE A FAILURE.

A London, Eng., despatch on Thursday states that while presiding at a meeting of the shareholders of the Great Eastern Railway to-day, Lord Claud Hamilton, the chairman, declared that the road had tried an American locomotive for a year and a half, but found it to be a complete failure.

AMALGAMATION OF COMPANIES.

THERE appears to be an erroneous impression abroad among the retail dealers of the country in regard to the effects of amalgamation of companies upon the retail trade in general.

Every amalgamation has for its object the increase of business, and hence of profits, but these profits do not arise out of the increased prices of goods but usually out of the decreased expenses, especially selling expenses. For instance, the various companies, before amalgamation, no doubt employed travellers to represent them who crossed and recrossed each other's ground each carrying his own set of samples and no doubt calling upon the same customers. After the amalgamation, one traveller carrying one set of samples would no doubt be able to cover the same or almost the same ground. It stands to reason also that the amalgamating companies, with increased capital, buying in larger quantities and thus purchasing raw material at lower prices and discounts, turning out larger quantities of goods at a less cost, are able to sell at lower figures than previous to the amalgamation.

The business is also under one executive head and management, and hence the policy of governing the business is the same. There have been a large number of such amalgamations during the last few years, and almost in every instance the tendency has been to lower prices, giving the dealer the benefit of any reduction in the cost of the finished product rather than increase in prices. The output after the amalgamation is large enough to warrant the employment of skilled workmen who are specially adapted for certain lines of work and are kept busy on these lines altogether instead of being shifted around from time to time as in the small factory. One factory may be specially adapted for the manufacture of certain lines of goods, and when the demand is large enough, as it no doubt would be after the amalgamation of interests, this factory may be kept running at these lines altogether, thus perfecting the manufacture.

LEAD COMBINE ORGANIZING.

The cause of those who are agitating for an increased tariff on lead and lead products is strengthened by the fact that the movement towards an amalgamation of the big lead concerns of the United States is now in progress.

The new organization, which has just been incorporated in New Jersey under the style of The United Lead Co., will include 25 of the largest sheet, shot and lead pipe concerns in the United States. The capital stock is placed at $15,100,000, but this amount will be increased when the organization has been completed.

It is a recognized principle that combines are more merciless in their treatment of competitive interests than are ordinary business houses, so it is natural to expect that the lead miners of British Columbia can expect even less consideration from the United States lead combine than they have received from the individual concerns who have virtually tied up their mines.

SOME OPINIONS ON THE LEAD TARIFF.

THOSE interested in the subject in Montreal are still discussing the visit of the lead miners of British Columbia. The feeling among those not directly interested, but who are conversant enough with the matter to give an opinion worthy of consideration, is not in full sympathy with the demands of the Western visitors.

One gentleman says that the lead produced by the British Columbian mines is not up to the standard of English lead, as the silver is not taken out of it properly, leaving it harder than it should be. He does not believe in protecting an inferior article.

Another fails to see why the miners ask for protection on pig lead. "The British Columbian miners have secured practical control of the Canadian market now for pig lead, and it has been gained by the aid of the tariff. Excepting in the case of a small amount of English lead used for certain kinds of shot, we do almost no importing. And yet they ask for a higher tariff; it can only be so that they can raise prices."

An importer said: "If these men want protection why don't they put themselves in a position to supply the Canadian market. The corroding is now all done in the States. There is no plant in Canada for that purpose, and no signs of one being erected. If the duty is raised, the lead will continue to be sent to Chicago for corroding and shipped back again to us. Why should the tariff be adjusted to protect half an industry when its proprietors show no intention of enlarging and completing it?"

A paint manufacturer says: "If the duty is placed on white lead so that Canadian lead miners will have this market to themselves it will mean, in time, that not only all the white lead, but mixed paints as well, will be manufactured at the mines, and the paint manufacturer who doesn't own his own mine will have to go out of business."

The view that the paint manufacturers of the future will be the lead miners is held by more than one in the business. The trend of the trade is considered to be working in that direction.

CANADA AND THE ALASKA BOUNDARY DISPUTE

THE announcement that there are to be no reservations in the Alaska boundary dispute is gratifying to Canadians. When it was first announced that Great Britain and the United States had agreed to submit the dispute to six jurists it was intimated, and particularly by The New York Sun and other American newspapers, that there was to be a reservation of the same points as was contended for by the representatives of the United States on the Joint High Commission of 1898, namely, that no question of occupation and sovereignty regarding these places in Alaskan territory in which the citizens of Russia in the first instance and those of the United States in the second instance had been in peaceful and undisputed occupation and exercise of sovereignty for more than 70 years, should be submitted to the jurists for consideration. Skagway and Dyea are the most important points in the reserved territory.

It was this position, taken by the representatives of the United States, that led to the indefinite adjournment of the Joint High Commission, with the understanding that the boundry question should be referred back to the respective Governments for further diplomatic negotiations. When, therefore, it was intimated in the first despatch that such places as Skagway and Dyea in the disputed territory were not to be submitted to the jurists, Canadians felt they had been compelled to eat the leek with all its attendant humiliating circumstances. While, however, the text of the treaty has not yet been made public, we are sssured by Sir Wilfrid Laurier that there is no reserved points whatever, and that Skagway and Dyea will be accordingly in the territory upon which the six jurists are to adjudicate.

Canada is somewhat sensitive over international disputes of this kind. Possibly fearsome would be a better term. And it is because her experience in such matters has frequently been unpleasant. Being a British colony, she has the idea that she has more than once been sacrificed by the British plenipotentiaries in order to placate the United States. And she has good reason for being possessed of this idea. We all remember Sir John Macdonald's experience of 1871, when he was in Washington associated with the British representatives, negotiating what afterwards became known as the Washington Treaty.

"I must say," wrote Sir John in a letter to Dr. (now Sir Charles) Tupper, "that I am greatly disappointed at the course taken by the British Commissioners. They seem to have only one thing in their minds—that is, to go home to England with a treaty in their pockets settling everything, no matter at what cost to Canada."

Unquestionably there has, within the last few years, been a marked change for the better in public feeling in Great Britain in regard to the importance of Canada. But it is also true that in Government circles the desire to court the favor of the United States is stronger than ever. This is a good thing as far as it goes. But we resent being the sacrificial lamb. Fortunately for Canada the board or court to which the disputed boundary line is to be submitted will be jurists —no doubt the best available—and not politicians.

There are some 30,000 square miles of territory in dispute, but even this is scarcely worth being held up as a source of international discord year in and year out. All that Canada wants is justice. If she gets this she will be satisfied which ever way the award goes.

CONDITION OF OUR INDIANS.

THE annual report of the Department of Indian Affairs, which has just been issued, cannot but be considered as entirely satisfactory. The report reveals the fact that in every tribe the Indians of the Dominion of Canada are steadily advancing in morals, education and industry, while their education in sanitary precautions has, in spite of prevalent epidemics and consumption, brought them through the year with a net gain of 151.

The population this year through the addition of many non-treaty Indians is 108,112, an increase of 8,585 over last year. Their entire income is estimated at over $4,000,000, of which $1,200,000 was earned in wages; and the large increase of $150,000 in this line shows the growing willingness of the Indian to work and provide for himself.

The small percentage engaged in agriculture own over $500,000 worth of farm implements and vehicles, including 87 threshing machines, 391 reapers and 3,121 light driving vehicles.

In the care of live stock the Indian compares favorably with the ordinary farmer, and, since the Government has introduced thoroughbred cattle among them, great interest has been shown in the rearing of cattle, of which they own 35,000 head.

Every day evidence is given of the increasing interest in religion and education, and very fine buildings are being erected for these purposes. There are 283 schools, all but 41 of which are denominational. Twenty-two industrial institutions and 40 boarding-schools are included in this number, and the aggregate enrollment is 9,669. Thirty per cent. are Roman Catholics, while the Anglicans and Methodists claim about 14 and 11 per cent., respectively. Of the whole 108,000, only 12,000 are pagans, and the greater part of these are the new Indians admitted into the treaty.

With 283 schools, 247 churches, real and personal property valued at $22,000,000, wage earnings of $1,250,000, a total income of $4,000,000, and increase of products and industries of almost $200,000, the Indian bids fair to place himself, in a few years, where Government grants will be unnecessary, and the white man will have a worthy neighbor and competitor in his copper-colored brother.

All this is good for the business man, for the more civilized the Indians become, the more of the necessities of civilized life will they naturally require.

Is it possible, now that the bulls have again got control of the stock exchange, that we shall see speculators on the horns of a dilemma?

TORONTO UNIVERSITY AFFAIRS.

QUITE a little interest has been excited by the article which appeared in last week's issue in regard to the unbusiness-like manner in which the affairs of Toronto University are conducted. And we are in receipt of letters from business men and others in regard thereto.

One correspondent, the head of a well-known manufacturing concern, asks whether the lecturers at the University are the best men to decide what students should be taught. If they are the proper kind of lecturers they should be; if not, they should be replaced by those who are. But here again is emphasized the necessity of a good governing body a senate of men of business common sense as well as of cultivated attainments.

Another letter received is from one of the staff of the University, but it is not for publication. The writer takes strong exception to some details of our article, but admits that in the main they are correct. He says they certainly need a more business-like administration. He himself knows something about business affairs and understands that a head of a concern should always be in close touch with the departmental staffs. At present, in Toronto University, they are going on pretty much as they please. They seldom ever have a general meeting of the staff or a much-needed discussion of college affairs.

While he admits we are correct in our criticisms, he hopes the matter will be allowed to drop for the present. They are appealing to the Government for money, which is very much needed. This criticism will tend, he fears, to defeat their application at a time when the Government is very favorable.

We do not agree with him. Now is the time to insist upon a more representative Senate a Senate that will represent the interests of the Province not the clergy, doctors, lawyers, missionaries, dentists, etc. We are mostly agriculturalists, miners, manufacturers and merchants. The Province is able, and will gladly contribute double what she is doing now; but not until she knows she is getting practical returns for it. She will never feel satisfied until there is a different kind of Senate in control. She does not propose to spend more money until she is assured of a college to educate men for something besides the professions.

RED TAPE OR THOUGHTLESSNESS?

MR. JARVIS, secretary of the Toronto Board of Trade, is in receipt of a letter from a Canadian exporter complaining bitterly of the delay in getting documents from the subsidized South-African Line sailing from Montreal.

It appears that this line issues four bills of lading for each consignment, but gives only two to the consignor, at the same time stipulating on the face of each bill that when one is accomplished the others are null and void.

As the banks handle the documents, they must have all negotiable bills of lading issued by the steamship company, but, as two of these are retained by the company, the bank, of course, refuses to recognize the other two. At the same time, there is a fine imposed on goods landing in South Africa before the documents.

The firm in question shipped a consignment on the first steamer, and were only enabled to get their documents through the bank (and that in unsatisfactory form) after several telegrams sent to the steamship company brought a letter which the bank consented to recognize. The same difficulty is being experienced on the Elder-Dempster steamer which recently sailed. A telegram sent to them to forward all the bills of lading has, so far, brought only the answer that two bills are sufficient for the consignor.

The fine imposed in South Africa makes the delay in the receipt of the documents a very serious matter, and exporters cannot, under such circumstances, be blamed for ignoring our own shipping facilities and consigning goods via New York instead of Montreal.

The firm in question has of necessity decided to use the New York route entirely until some more satisfactory and less irritating methods are adopted on the Canadian routes. They feel as strongly as anyone that if proper facilities were afforded the Canadian steamship service should be patronized, but they contend they are unable to do so under present conditions.

OIL COMPANY FLOTATIONS.

THE strike of a second oil well in the Raleigh, Ont., oil field is likely to cause a renewal of the excitement occasioned by the strike of the now famous "Gurd" gusher which led to so much speculative drilling on the Raleigh fields. This second gusher was struck by drillers of the Chatham, Ont., Oil Co., and is reported to have been even more prolific than the "Gurd" was first thought to be. When oil was struck at a depth of 1100 ft. it rose to the top with such force that the well could not be capped for half-an-hour, and a rich flow of high-grade crude oil is expected.

This second strike will probably be made the most of by promoters of companies being organized to carry on drilling operations in the Raleigh fields. Before business men invest in such companies it would be well to hesitate twice. A despatch from Petrolea, Ont., last week said the field was being abandoned by experts after it had been almost a sieve of wells. Some 15 or 20 wells were sunk in a circle around the Gurd well, but yielded no returns. This is the first well to be put down at any distance from the Gurd gusher, which has proven successful.

Dr. Fairbanks, one of the leading oil men of Petrolea, said on examining the Raleigh find, that the Gurd gusher had evidently tapped a small pool, but that there were probably other pools in the field, one of which has now been struck.

In reference to the matter The Petrolea Advertiser says:

> The systematic reports of imaginary flowing wells found in Raleigh are apparently being turned to the advantage of promoters of companies who are endeavoring to follow the Rossland example, and induce investors to subscribe their good money. * * * It is quite proper to organize a company for the purpose of operating for oil if the parties asking for subscriptions are made aware of the true facts of the enterprise, and are made to know that they are taking long chances, and are doing it on a fair and equal footing with the rest of the stockholders; but that is an entirely different proposition from the one we have in mind, where subscriptions are obtained upon the strength of representations as to the existence of producing wells, which in reality are but creatures of the imagination.

It is not likely, when the business men of Canada, and particularly of Ontario, read the above extracts, that they will indulge in any speculative purchases of Ontario oil companies' stock until they are personally conversant with the field which the concern will work. It is a case for mature consideration before the investment is made.

MARKETS AND MARKET NOTES

QUEBEC MARKETS

Montreal, January 30, 1903.

HARDWARE.

ORDERS for spring delivery are coming to hand quite rapidly and the wholesale hardware trade seem to think that the hardware business for 1903 will be far in excess of that of 1902. There have been a good many orders for carriages and loaded sleighs received during the week. In all probability there will be an increase in cotton wrapping twine, cotton clothes lines and cotton rope. An advance of from 10 to 15 per cent in all kinds of rubber hose has been booked since our last report. There is also a change in horse nails, which we would call to the attention of our readers. We might mention that the business in hockey sticks is about done for this season, and there is only a small stock to carry over.

LAWN MOWERS.—A few orders for spring delivery are being received daily. Quotations follow: 10½-in. wheel by 12 in. cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—The market is quiet as it is a little early yet for spring orders to start. The prices remain as last quoted. They are as follows: $2.80 per 100 lb. f.o.b. Montreal; $2.45 f.o.b. Cleveland, in carlots of 15 tons; $2.67½ f.o.b. Cleveland, in smaller lots.

GALVANIZED WIRE.—There is a very small movement in this line, and the prices remain unchanged. Our prices are as follows: No. 5, $3.70; Nos. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—There is nothing of importance to report this week, as the market is still quiet and unchanged. We quote: Bright and annealed, $2.50 per 100 lb. f. o. b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE WIRE.—Business is dull in fine wire this week. The discount is still 25 per cent. with the following extras: 1 and 2-lb. hanks, 25c per 100 lb.; ½-lb. hanks, 37½c. and ¼-lb. hanks, 50c.

BRASS AND COPPER WIRE.—The discount is 62½ per cent., with the market steady.

FENCE STAPLES.—Business in fence staples is fair for spring delivery, and quotations follow: $3 per 100-lb. keg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

WIRE NAILS.—The market is quite firm. We quote: Carlots, $2.40, and small lots, $2.45 per keg f.o.b., Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

CUT NAILS.—There is somewhat of an improvement in cut nails. In carlots, the price is $2.40 and in small lots, $2.45 per keg.

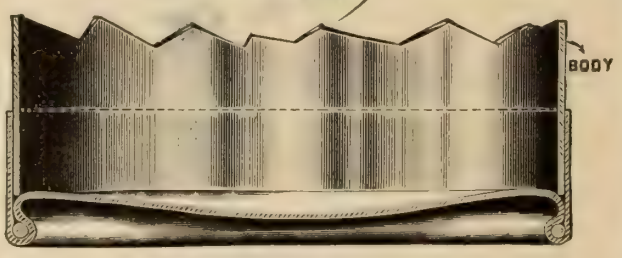
HORSE NAILS.—There are no quotations on "M" brand this week. The prices will be given on application. Other discounts are as follows: "C" brand,

"Samson" Milk Cans and Trimmings

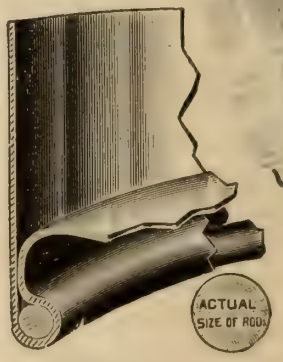
PATENDED, JULY 23, 1900

"Samson" Railroad or Delivery Cans and Trimmings.

"Samson" Dairy Pail Bottoms.



Section of "Samson" Milk Can Bottom



PATENTED, JULY 23, 1900

The "Samson" is the strongest and **ONLY ONE-PIECE** bottom made.
Has no place for dirt or sour milk to lodge—therefore the only sanitary bottom made.
Every bottom in each size is of an exact diameter. Being stamped with a die there can be **NO** variation as in a bottom made in several pieces.
"Samson" Railroad or Delivery Cans and Trimmings are always furnished with Seamless Neck, and Seamless or Bell Cover, which, combined with the "Samson" Bottom, makes this unquestionably the best Railway or Delivery Can ever placed on the Canadian market.
The "Samson" Dairy Pail Bottom is made the same as the "Samson" Milk Can Bottom, and therefore has all its good features.

A complete stock of Tinned Sheet Iron in all gauges and sizes always kept on hand.

40, 10 and 7½ per cent. off. Monarch, 65 per cent. "Peerless," 50 and 7½ per cent.

HORSESHOES.—The market is steady and a fair business doing. Our prices are as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.45; No. 1 and smaller, $3.60; snow pattern, No. 2 and larger, $3.60; No. 1 and smaller, $3.85; X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.45; No. 1 and smaller, $3.70; feather weight, all sizes, 0 to 4, $5; toe weight, all sizes, 1 to 4, $6.25. Shoes, more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—Few orders are being booked and the market is without feature. Discounts are as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—The output for the present is very small. Discounts are: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent.; full square carriage bolts, 55 per cent.; machine bolts, 50 and 5 and 10 per cent.; coach screws, 66 2/3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50, 5 and 10 per cent. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3½c. per lb. off list; hexagon nuts, 3¾c. per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—The trade is quiet and prices remain unchanged. We quote as follows: Round head bright, 82½ and 10 per cent.; flat head bright, 87½ and 10 per cent.; brass, round heads, 75 and 10 per cent.; brass, flat heads, 80 and 10 per cent.

CORDAGE.—The market is without any change this week. Quotations follow: Pure manila, 14c.; British pure manila, 12c.; sisal, 11c.; double lathyarn, 11c.; single lathyarn, 10½c.

BUILDING PAPER.—A few orders for future delivery are being received. Prices are as follows: Tarred felt, $1.75 per 100 lb.; 2-ply, ready-roofing, 90c. per roll; 3 ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 50c. per roll; tarred fibre, 60c. per roll, O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN WIRE CLOTH.—There is quite a brisk demand for screen wire cloth, with the prices firm. The price quoted is $1.40 per 100 square feet.

FIREBRICKS.—There is not much doing in this market. We quote: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—Very little business is being done in cement. Prices follow: Canadian cement, $1.90 to $2.25; German, $2.20 to $2.30; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel ex store, and American, $2.10 to $2.20 ex cars.

SNOW SHOVELS.—The bulk of the business is done for the season, although a few sorting up orders are coming forward. We quote: "Habitant," $2.25 to

Wire Rope.

Ferrona Pig Iron

And SIEMENS MARTIN

OPEN HEARTH STEEL.

$2.40; "Victor," 40 per cent. off; steel railroad shovels, 48 and 5 per cent. off.

FIRE SHOVELS.—Business continues to be fair and the discounts remain unchanged. They are as follows: No. 70, 38½ to 40c. per dozen; No. 55, 55 to 60c.; No. 57, $2¼ to 90c.; No. 60, $2½ to 90c.; No. 65 $1.37½ to $1.45; No. 80, 50 to 55c.; "Duplex," No. 7, $1.21; No. 9, $1.52. No. 11, $1.82.

COAL HODS.—There is still a fair demand for coal hods. Quotations are as follows: Japanned, 16 in., $4.50 per doz.; 17 in., $4.80; 18 in., $5.10; with gold band, 17-in., $5.10; 18-in., $5.40. Galvanized, 16-in., $6.20; 17-in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

LANTERNS.—The market is steady at last week's quotations. We quote as follows: Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7 per doz.; dash-board, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper-plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

METALS.

The metal market is very active, and the demand for heavy metals still continues to increase. In pig iron, the prices are steady, and all the furnaces are busy filling previous orders, but there seems to be no eagerness on the part of producers of pig iron to make new contracts. Structural forms are in good demand, and steel for bridges, ships, etc., is in active request. Inquiries for steel rails are good, and a report says that orders up to the present in the United States amount to as much as was produced in the whole of 1902. Ingot tin has advanced to $32. It is scarce at present, but speculation is also a feature in its advance. The foreign metal market is firm on nearly all lines. Canada plates have advanced again, this time 2s. 6d. per box. Black sheet iron is from 2s. 6d. to 5s. higher per ton. Coke tinplates have advanced 1½d. per box, and terne plates have also increased 3d. per box. A letter from Birmingham, Eng., under date of January 10, regarding the quarterly meeting of the metal manufacturers in that city on January 8, says: "The market generally was decidedly stronger, and makers, all round, were asking for advances on current quotations; consequently a good deal of business that was in the hands of merchants was referred back for higher limits. Tinplates and Canada plates were also strong."

BAR IRON.—The market is quite firm and a fair trade is doing. We quote as follows: Merchants' bar, $2; horseshoe iron, $2.25; forged iron, $2.20.

BLACK SHEETS.—There is a fair demand and the prices are steady, as follows: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 24 gauge, $2.50; 8 to 20 gauge, $2.50.

GALVANIZED IRON.—There is no change in the prices and business is very quiet. We quote: No. 28, Queen's Head, $4.40; Apollo, 10½ oz., $4.30; Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand $4.05. For less than case lots 25c. extra is charged.

LEAD PIPE.—Only a fair business is being done in lead pipe. Composition and waste are quoted at 8c. and ordinary at 7c. The discount is 37½ per cent.

IRON PIPE.—The market is quire active and the prices firm. Our quotations

KERRIGAN HARDWARE CO, LONDON, ONT.

follow: Standard pipe, per 100 feet, in lengths under 19 feet: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1 in., $5.20; 1¼, $7.35; 1½, $8.95; 2 in., $12.55. Galvanized, ¼, 33.29; ⅜, $3.45; ½, $3.85; ¾, $5; 1 in., $7.20; 1¼, $10.05; 1½, $12.20; 2-inch, $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, ½, $4.20; ¾, $5.25; 1-in., $7.55; 1¼, $10.55; 1½, $12.75; 2 in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1-in., $9.50; 1¼, $13.25; 1½, $16; 2 in., $21.90. For threads and couplings 5 per cent. is added.

TINPLATES. The prices remain unchanged, although another advance has taken place on the foreign market. We quote: Cokes, $4.25 and charcoals, $4.75 to $5.25.

SOIL PIPE AND FITTINGS.—There is practically nothing doing in these lines. We quote the discounts as follows: Light soil pipe, 3 to 6 inch, 50 per cent.; medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8-inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.: extra heavy fittings, 8-inch, 45 per cent.

PIG IRON.—The prices are very firm, and not much desire for new contracts at present prices. We quote $23.50 to $24.50 ex store, Montreal.

INGOT COPPER.—There is a firm feeling in this market. We quote $13.50 to $14.50 per 100 lb.

INGOT TIN.—Prices are advancing. We quote $32 to $33.50 per 100 lb.

PIG LEAD.—The market continues firm. In carlots, the price is $2.90, and in small lots, $3.25.

STEEL. The outlook for steel is very bright and some good orders are being booked this week. Quotations are as follows: Sleighshoe, $2.10 to $2.20; tire, $2.20 to $2.25; bar, $2.05; spring, $2.85 to $3; reeled machinery, $2.75; toecalk, $2.60 to $2.90; machinery (iron finish), $2.10; mild steel, $2.05; square harrow, $2.15.

TOOL STEEL.—There is a steady demand for tool steel, and the prices are firm. Our quotations are as follows: Black Diamond, 8c.; Sanderson's, 8 to 12c., according to the grade; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 65c. per lb.

CANADA PLATES.—A fairly good trade is doing in Canada plates, and the market is firm. Our quotations are as follows: 52s, $2.70 to $2.80; 60s, $2.85 to $2.90; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized 70s, $4.45 to $4.55.

TERNE PLATES. The local market is steady. We quote $7.50.

COIL CHAIN. There is a fair business being done in this line. Prices are as follows: No. 6, 10c.; No. 5, 9c.; No. 4, 8½c.; No. 3, 7c.; ¼ in., 6½c. per lb.; 5-16, $5; 5-16 exact, $5.25; ⅜, $4.30; 7-16, $4.10; ½, $4; 9-16, $3.80; ⅝, $3.70; ¾, $3.60; ⅞, $3.55; 1 in., $3.50. In carload lots an allowance of 10c. is made.

SHEET ZINC.—The market is quite steady. We quote from $5.75 to $6.

ZINC SPELTER. This market is at a standstill. The price is $5.25.

SOLDER. A fair business is being done and the prices are quite firm. We quote: Bar solder, 20c. and wire solder, 18c.

Hayes' Patent Steel Lathing

Has points in its favor that you can't afford to overlook.

In the first place it requires less mortar, and can be more quickly applied than others—most valuable advantages that have been proved by conclusive tests.

Then the sheets are not weakened by stretching in manufacture—they clinch and hold the mortar firmly, making the most rigid lathing you can find.

This gives a fire, water and vermin proof protection, that is really more economical in cost than other styles.

For covering pipe chases, hot-air flues, etc., it is extensively used and proves invaluable.

Read it up in our catalogue and you'll fully understand its superiority.

Metallic Roofing Co., Limited

TORONTO. MONTREAL. WINNIPEG.

The business generally in scrap metals is fair and the prices steady. There is a

RAW FURS.

At the January fur sales in London, which were held last week, the greater number of lines were advanced, although material reductions took place in bear skins, wolf and cat.

The changes were as follows: Racoon, 20 per cent. higher than last March sale; muskrat, 35 per cent. higher than last January; black muskrat, 15 per cent. higher than last January; black and short-striped skunk, 10 per cent. over last March; long-striped skunk, 25 per cent. over last March; white skunk, 40 per cent. over last March; civet cat, same as last March; opossum and mink, each 15 per cent. over last March; marten 12½ per cent over March; baum marten, 15 per cent. over March; Russian sable, pale sorts, 20 per cent. over March, and dark sorts, the same as last March; white, grey and silver fox, 15, 25 and 30 per cent., respectively, over March; red fox, the same as in March; beaver, the same as last January; black and brown bear, 20 per cent lower than March; grizzly and white, the same as March; wolf, 10

CASTOREUM—.................... $5.00 to $6.00 per pound.

per cent lower than March; wolverine, the same as last March, otter and lynx, each 10 per cent. over last March; wild cat, 10 per cent lower than March, and house-cat, 25 per cent. higher than March; badger, 15 per cent. over March; ermine, the same as in March, grese, 50 per cent. higher than last March; real and bastard chinchilla, the same as last October; nutria, same as March; Australian opossum, wallaby and kangaroo, same as last October; wombat, 5 per cent. over last October; dry-hair seal and Nort-Ameriran rabbit, both the same as March.

The spring sales will commence on March 23, 1903. No change in local prices have been made as yet, nor will dealers admit that there are likely to be any. Prices are very high now, and the feeling in some quarters is that a break may occur. The market is somewhat excited and dealers do not care to make new prices at present. Local prices remain as given on previous page.

SCRAP METALS.

slight advance in heavy and light copper. Scrap iron is in good demand. Our quotations are as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $15 to $16; No. 2, $7 per ton; machinery scrap, $16.50 to $17; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6½ to 6¾c. per pound.

HIDES.

The hide market is active and a slight change will be noticed in our quotations. The reason given for the advance in prices is that the local and outside buyers got up against each other. We quote as follows: No. 1 hides, 8c.; No. 2, 7c.; No. 3, 6c. Calf skins, 8 to 10c. and lambskins, 75c.

MONTREAL NOTES

An advance in rubber hose is noted this week.

Ingot tin has advanced about $2 per 100 lb.

ONTARIO MARKETS.

Toronto, January 30, 1903.

HARDWARE.

BUSINESS during January has been exceptionally good, and though immediate shipments have fallen off somewhat as compared with a week ago, they are still well up to the average. Orders for future delivery are well in in many lines and have been of such volume that the prospects are considered excellent. There seems to be a general belief that the present year will be, as the past year, one of expansion, so retailers have been liberal buyers. The machine shops, too, show exceptional activity and are sending large orders for this season for bolts, rivets and burrs. Prices all along the line are well maintained. Only one change, an advance of 5 per cent. net in stoves, ranges and hollow ware is noted.

BARB WIRE.—Orders are well in but a few are still arriving. No change in the prices. The base price is now quoted as follows: $2.55 from Cleveland, and 10c. less in carlots. From stock, Toronto, $2.80.

COILED SPRING WIRE.—This line is now received with much favor by the trade. Prices are steady, as follows: No. 9, $2.75; No. 11, $3.10; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlots of 15 tons, 5c. less, with freight up to 20c. allowed.

GALVANIZED WIRE.—Orders have been liberal and seem to be all in. Prices follow: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE.—There are still some orders coming in, particularly for oiled and annealed. We quote the base price as follows: $2.50 per 100 lb. Oiling, 10c.; coppering, 60c. and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—A few sorting-up orders are coming in for immediate shipment; also some for late delivery. We quote as follows: $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS.—Prices are well maintained, but there is nothing doing. We quote $2.50 per keg.

HORSE NAILS.—No change. The demand is small. Quotations on "M" brand have been withdrawn. Prices are unchanged. Discounts are: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "Monarch," 65 per cent., and "Countersunk" head, 65 per cent.; "Peerless," 50 and 7½ per cent.

HORSESHOES.—The trade is normal and without change in prices. We now quote: Iron shoes, No. 2 and larger, light medium and heavy, $3.45; snow shoes, $3.70; light steel shoes, $3.55; featherweight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—The demand is fair, and we quote: Flat head bright, 87½ and 10 per cent. discount; round head bright, 82½ and 10 per cent.; flat head brass, 80 and 10 per cent.; round head brass, 75 and 10 per cent.; round head bronze, 65 per cent. and flat head bronze, 70 per cent.

RIVETS AND BURRS.—A more active demand is noted, and our quotations are as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—Machine bolts are particularly active. Other lines are steady. There is no change in prices: Carriage bolts, common ($1 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—Considerable business is being booked for future delivery, but no immediate shipment orders are coming in. Prices are unchanged. The discount is 45 per cent., and the list price has been reduced $3 per doz. for Olds' goods, $2 for Gray's and $1 for Burns'.

ROPE.—Orders are of a small nature. We quote: Pure manila, 14c.; British manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3 cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—Orders continue to come in freely. No change in discounts is noted, they continuing at 60 and 10 per cent.

LAWN MOWERS.—The demand keeps up excellently. The prices are as follows: Woodyatt, 12-inch wheels, $7.50; Star, 12-inch wheels, $5.50; Daisy, 12-inch wheels, $4.90; Philadelphia, 10-inch wheels, $6; Ontario, 10-inch wheels, $12.75. The other prices are in proportion.

BUILDING PAPER.—A fair trade is reported. Quotations are as follows: Dry sheathing, grey or straw, 35c. per roll; tar sheathing, grey or straw, 45c. per roll; dry fibre, 50c. per roll; tarred fibre, 60c. per roll.

TINWARE AND ENAMELLED WARE.—A good movement continues in milk-can trimmings, but the general trade is moderate.

RANGE BOILERS.—A good business continues. Prices are firm. We quote: 18 and 30 gallon, $6; 35 gallon, $7; 40 gallon, $8; 52 gallon, $12.50; 63 gallon, $19; 82 gallon, $23; 100 gallon, $31, and 120 gallon, $37.

PLUMBERS' BRASS GOODS.—A good brisk business continues and prices keep firm.

STOVES AND RANGES.—An advance of 5 per cent. in stoves, ranges and hollow ware net is reported in all lines except steel ranges, steel cookers and base burners.

SCREEN DOORS.—Orders are keeping up well. Our quotations are as follows: Screen doors, common, two or three panel, walnut stained, 4-inch style, $6.60; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3-inch style, 20c. per dozen less.

CEMENT.—Trade is opening up nicely. Prices are 40 to 50c. lower. We quote as follows: Canadian Portland, $2.40 to $2.50; hydraulic, $1.35 per barrel.

METALS.

The general market conditions are very active. Judging from the orders received for future delivery the spring trade in metals will reach a much greater volume than was anticipated. Prices are firm but without change.

PIG IRON.—The market keeps stiff, the founderies still having difficulty in keeping up with current orders. The prices are as follows: $23 to $25 for No. 1 and $22.50 for No. 2 at the Canadian furnaces. No. 2 Summerlee is quoted at $25 on track, Toronto.

STEEL BOILER PLATES.—We quote $2 per 100 lb. at Pittsburg.

TOOL STEEL.—There is no change. The demand keeps brisk. Quotations follow: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8c. to 9c.; Park's "Silver," 12 to 14c.; Park's Special," 15 to 20c.

MILD STEEL.—Prices continue steady. We quote $1.90 per 100 lb. at Pittsburg and $2.75 per 100 lb. on track, Toronto.

SPRING STEEL.—The activity is well maintained. We quote $3.50 per 100 lb. on track, Toronto.

BAR IRON.—Prices are firm as the market keeps active. We quote the base price: $2.05. Extras cut to length while rolling: 2 ft. and over, 10c. per 100 lb., 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft. by special agreement, according to length and size.

BLACK SHEETS.—The demand is now active. We quote as follows: Common, $3.15 for 28 gauge and dead flat, $2.50 for 26 gauge.

CANADA PLATES.—Small lots are going out freely from stock and orders are liberal for future delivery. Prices are: All dull, $2.90 to $3; half polished, $2.85 to $3.10 and all bright, $3.75 to $3.85.

GALVANIZED SHEETS.—There is still a brisk trade. Prices keep steady, and we quote as follows: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—The demand is brisk for small lots. Prices are firm at last week's advance. We quote $31 to $32 per 100 lb.

TINPLATES.—Unchanged. We quote as follows: Charcoals, $4.75 to $5 and cokes, $4.25 to $4.50 per box.

COPPER.—Ingot is in fair demand, and sheet copper is active. We quote as follows: Ingot copper, $13 and sheet copper, $22 to $23 per 100 lb.

BRASS.—Unchanged. The discount is 15 per cent.

LEAD.—More inquiries are now being received. The prices are unchanged at $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE.—The demand keeps brisk and some jobbers are having trouble in filling orders. We quote per 100 ft.: Black pipe, ⅛ in., $3; ¼ in., $2.30 to $2.40; ⅜ in., $2.65; ½ in., $2.85; ¾-in., $3.65; 1-in., $5.20; 1¼ in., $7.35; 1½-in., $8.95; 2-in., $12.55; 2½-in., $20 to $21; 3-in., $24 to $25; 3½ in., $30 to $32; 4-in., $37.50 to $38.

ZINC SPELTER.—Brisk movement. We quote 5 to 6c. per lb.

ZINC SHEETS.—In considerable demand. We quote the base price as follows: Cask lots, $6 to $6.25 and part casks, $6.25 to $6.50.

SOLDER.—A better inquiry. The prices are steady at 20c. for guaranteed half and half, and at 17 to 18½c. for wiping.

ANTIMONY.—Business is in small lots. The price is steady at $9 per ton.

HIDES, SKINS AND WOOL.

HIDES.—There is a good supply and no change in the market. We quote as follows: No. 1 green, 7½c.; No. 2, green, 6½c. per lb.; No. 1 green, steers, 8c.; No. 2 green, steers, 7c. per lb.; cured, per lb., 8¼ to 8¾c.

CALF SKINS.—We quote: Veal skins, No. 1, 6 to 14 lb. inclusive, 10c.; No. 2, 8c.; No. 1, 15 to 20 lb. inclusive, 9c.; No. 2, 7c. Deacons (dairies), each, 60 to 70c.

SHEEPSKINS.—Fairly good supply. We quote 80 to 90c.

WOOL.—The increase in the foreign markets of 5 per cent. will affect us in the spring, but as yet the prices are the same. We quote: Unwashed wool, per lb., 8 to 8½c.; fleece wool, 15c.; pulled wools, super, per lb., 15 to 16c.; ditto, extra, 19 to 20c.

TALLOW.—Tallow is very scarce. We quote: Tallow, per lb. (track, Toronto) 5¾ to 6c.; ditto (out of store) 6¼ to 6½c.

SEEDS.

There is a very active market at present in red clover. Owing to the strong export demand in red clover and timothy prices have materially advanced. We quote: Alsike, prepaid aboard at outside points, per bushel, $6 to $7.25; red clover, prepaid aboard at outside points, per bushel, $6.50 to $7.25; timothy, prepaid aboard at outside points, per bushel, $1.75 to $2.25.

PETROLEUM.

The firmness is still manifest, but the upward tendency seems checked. The Imperial Petroleum Co.'s prices are as follows: Lily White, Canadian, 18c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less. The Queen City Oil Company quote as follows: Sarnia Prime White, 18c.; Sarnia Water White, 20c.; Family Safety, 20½c. in bbls.; Pratt's Astral, 20c. in bulk.

OLD MATERIAL.

Deliveries are quiet but the demand is active. An advance of ½c. is noted in heavy copper and wire. We quote as follows: Heavy copper and wire, 10½c. per lb.; light copper, 8 to 8½c.; heavy red brass, 9½c.; heavy yellow brass, 7½ to 8½c.; light brass, 5 to 5½c.; lead, 2 to 2¼c.; scrap zinc, 3c.; iron, No. 1 wrought, $15 per net ton; No. 2 wrought, $4.50; machinery cast scrap, $15.50 to $16; stove plate, $10; malleable and steel, $6 to $6.50; old rubbers, 6½c. per lb. and country mixed rags, 50c. per 100 lb.

NOVA SCOTIA MARKETS

Halifax, January 27, 1903.

THERE is not a heavy trade being done in hardware so far this season, but the travellers continue to take considerable orders for spring delivery, and conditions are encouraging.

* * *

The report of the president of the Board of Trade, at the annual meeting held on January 20, has the following to say of the hardware trade for 1902: "From reports received we are led to believe that the business in hardware and kindred lines doubtless exceeded in 1902 that of any previous year, save 1900-1901, which had the benefit of the exceptional demand made by the construction of the large works at Sydney, C.B.

"The greatest detriment to the trade has been the uncertainty of obtaining supplies during the first part of the year from makers, but new goods are coming forward more freely and the feeling of gratification over a good year's trade is tempered by the thought of the still greater business that might have been done had the goods been procurable.

"Few bad debts have been made, collections have been good, prices not subject to much fluctuation, and although competition has been keen, without doubt the year's business has been fairly profitable."

* * *

Of general conditions, it says: "The outlook for 1903 is satisfactory and prom

W.L. Haldimand, Jr., Eastern Agent, Montreal

ising so with the mining interests still extending, and, if the fishing industry is up to the average, we see another good year before us.

* * *

The hardware jobbers of this city send out about 25 travellers, who thoroughly canvass the Maritime Provinces, and of late years have recovered a large part of the trade which went to other centres. Some firms also deal largely with Newfoundland and the Magdalen Islands.

* * *

The distributing element at the present time in hardware is turpentine. This has been subject to a heavy advance, and retail quotations here now, if changes in the primary market were considered, would be 88c., and 93c. in smaller quantities. The quantity in stock is not extensive, and this may result. However, this may be said generally of the business houses here, that changes are not made unless there is an actual necessity, or, if made, they do not run as high as the primary market would warrant. Some dealers are of the opinion that this article may go to $1.

* * *

Linseed oil is also moving upward and quotations are uncertain. No change is expected in quotations here until a distinctly higher value is established in the foreign market.

R. C. H.

MANITOBA MARKETS.

WINNIPEG, January 26, 1903.

BUSINESS is moving along steadily, and no change of price is reported for the week. All jobbing houses are preparing to get orders for spring out early, and special attention is given to building hardware, for which there will be a heavy retail demand in the country this season.

Nearly all dealers handling lumber at country points have doubled and trebled their usual orders for lumber, and delivery is asked from two weeks to a month earlier than usual. Implement men will, as usual, have everything in readiness for a display of their goods during bonspiel and the two following weeks, when the stock conventions and stock judging school will bring in large numbers of farmers from all sections of the Province.

There is a very general feeling of apprehension in the jobbing trade as to getting orders to destination owing to the bad state of all transportation in the West. Never in the history of railroading here have there been so many dead engines. One of the secrets of this trouble, which the roads will not, of course, admit, is due to the practice of laying off shopmen in winter time for economy. Very poor economy it has proved, for the rolling stock has gradually deteriorated until when the strain came it speedily gave out. The coal, on which the companies lay most of the blame, is not responsible for one-half of it.

CAVERHILL, LEARMONT & CO.,

St. Peter St.,

MONTREAL.

FOREST CITY GOSSIP.

Office of "Hardware and Metal."
London, January 27, 1903.

THE wholesale hardware and metal trade of London, Ont., shows signs of augmentation during last week, the travellers have returned from a week's lagoon, having booked a fair week's business.

* * *

The seasonable weather, with good sleighing in the country districts, is bringing into the towns and villages, customers from every far away corner, causing some demand from outside dealers for staple articles.

* * *

Some slight flurry is caused in the trade by alterations in the price of fence wire. A revision of the price of galvanized plain wire has taken place for shipment out of stock, and the list of prices of December has been superceded. For convenience, I give here in this letter, the price of galvanized wire, f.o.b. London: 4x5, $3.70; 6 to 8, $3.15; 9, $2.50; 10, $3.20; 11, $3.25; 12, $2.65; 13, $2.75; 14, $3.75. Terms, 60 days, or 2 per cent., 30 days. The above is the price to hardware retail merchants in Ontario. Compared with the December list, it will be noticed that only on the three sizes which are most largely used here, has the price lowered, and that only 15c. per cwt. on 9, 12 and 13 gauge.

The hardware wholesale merchants have great warehouses in this city, and the citizens are very justly proud of them. We note, with pleasure, one of the most recently erected, situated on the south-east corner of King and Clarence streets, occupied by James Wright & Co. This structure was completed and occupied by them last September, and is a credit to the enterprise of the firm, as well as to the contractors who undertook the work. The dimensions are 70 ft.x110 ft., with five flats, including the basement. Brick, with stone facings, are entirely fireproof, without ornamentation or fancy scroll work on the roof, the whole has the appearance of solidity and business. Wm. Wright, whose father died four years ago, is now at the head of the concern, and although still a young man, is giving evidence of tact and ability. He is well and ably supported by efficient and experienced managers in the different departments. Their business is chiefly hardware, bar iron and steel, and are manufacturers of carriage trimmings and unfinished carriages. Twenty five hands are employed, and three travellers represent the firm on the road. Goods are shipped by James Wright & Co. to the Pacific Coast, as well as north, south, east and west in the older Provinces.

* * *

A visit to Alfred Westman's new store, Dundas street, found him and his on and employes up to the neck in work. Their new store gives them entire satisfaction; they have an entrance from the market square in the rear as well as the front entrance on Dundas street. The new premises are fitted up in modern style, and their 1½ storeys are laiden with new goods, which are being checked off and arranged on shelves, according to their different classes, as fast as it is possible so to do. When all incoming shipments are received and arranged for spring, the interior will present a handsome and attractive appearance. Mr. Westman is almost the oldest hardware man in London, his business, like London itself, has prospered and grown from small things.

* * *

A very useful pocket price-book, as sweet a little gem as one can conceive, has just been sent to their friends and customers by the firm of D. H. Howden & Co., besides a calendar and indexed memo., a price-list of several leading lines is given. Little kindnesses such as this, from wholesale firms to their customers, are much appreciated.

* * *

No change to note in price of other hardware goods this week. Coal seems to have declined somewhat, the ruling price being $10 for hard, and big manufacturing firms are smiling at the prospect.

W. H. L.

PERSONAL MENTION.

Mr. F. J. Taylor, of The Western Foundry Co., Wingham, Ont., made a business visit to Toronto this week.

Mr. A. A. McMichael, of The James Robertson Co., Limited, Toronto, is on a business trip to Baltimore, Md., this week.

Mr. O. A. Cole, of the Toronto branch of The Philip Carey Roofing Co., has just returned from a business visit to branches of his house in Cleveland and Pittsburg.

Mr. Geo. Henderson, of Henderson & Potts, Halifax, and director of The Henderson & Potts Co., Limited, Montreal, made a business visit to the latter city last week.

Mr. J. D. H. Brown, of Messrs. Moore & Brown, Sault Ste. Marie, Ont., spent a week or so in Toronto, Hamilton and London, where he was cordially welcomed by his many old friends in those cities, particularly in Toronto, where he is exceedingly popular.

CANADIAN NORTHERN RAILWAY.

The Canadian Northern Railway has issued a new time table, which shows the new route of their main line extensions. Instead of proceeding westward from Prince Albert to Edmonton, it goes from Grand View through Saskatoon and Battleford to Edmonton. As this extension will be rapiply pushed through, shippers to the Northwest should secure a copy of the new time table from Wm. Phillips, general agent for the road, King street west, Toronto. The railway will cover a large section of Manitoba and the Northwest from Port Arthur westward, and should be considered by every shipper. When writing to Mr. Phillips mention HARDWARE AND METAL, and full information will be forwarded.

THE "CANADA" BOOM.

THE wide-reaching extent of the advertising which the Canadian Northwest is receiving is shown in a striking manner by the following from The National Builder, the leading architectural paper of Chicago; "Once in a while there appears to be a strong desire in communities for a change of home; like bees in hiving time, the young and restless seem instinctively to want a change. During the last year, thousands of families have left this country and emigrated to Canada to found new homes in the 'Silent Land' where farms can be attained at a very low figure, and where the conditions 'politic,' are about as in the United States, and the language the same. Quoting a contemporary on the subject who says that: 'In the Canadian Northwest there are thousands of miles of fertile prairie soil, well adapted to wheat and other small grains. These lands are cheap. The Canadian Government is anxious for settlers, and there has very cleverly been instituted a promotion scheme which has reached the farmers of the West by the thousand, and so Iowa, Minnesota, Nebraska and the Dakotas, and in a less degree some other States, have contributed multitudes of their best and most thrifty citizens for the prospective upbuilding of Manitoba, Assiniboia, Alberta and perhaps Saskatchewan. In addition Ontario has under way a boom for its north and western country, and an American syndicate is busily exploiting among prospective settlers the alleged superior advantages of its concessions.' The writer points out the fact that there is a scarcity of wood in some of the regions named, and this must be a great drawback to the farmer in a climate where the mercury gets down to 30 or 40 degrees below zero at times. He forgets, however, that the Canadian Northwest is blessed with an abundance of coal; indeed, is brought about by the 'chinook' winds, which come from the Pacific and sweep down through the gorges and passes in the Rocky Mountaine. Yet there is a vast and fertile area, where the winters are nearly as bad as they are in Chicago, and in some places colder."

Window and Interior Displays

Timely Hints and Suggestions.

IT is scarcely within the memory of the present generation when windows in stores were for no other purpose than the letting in of light, and to the next generation such a purpose will appear historical- nay, even mythical.

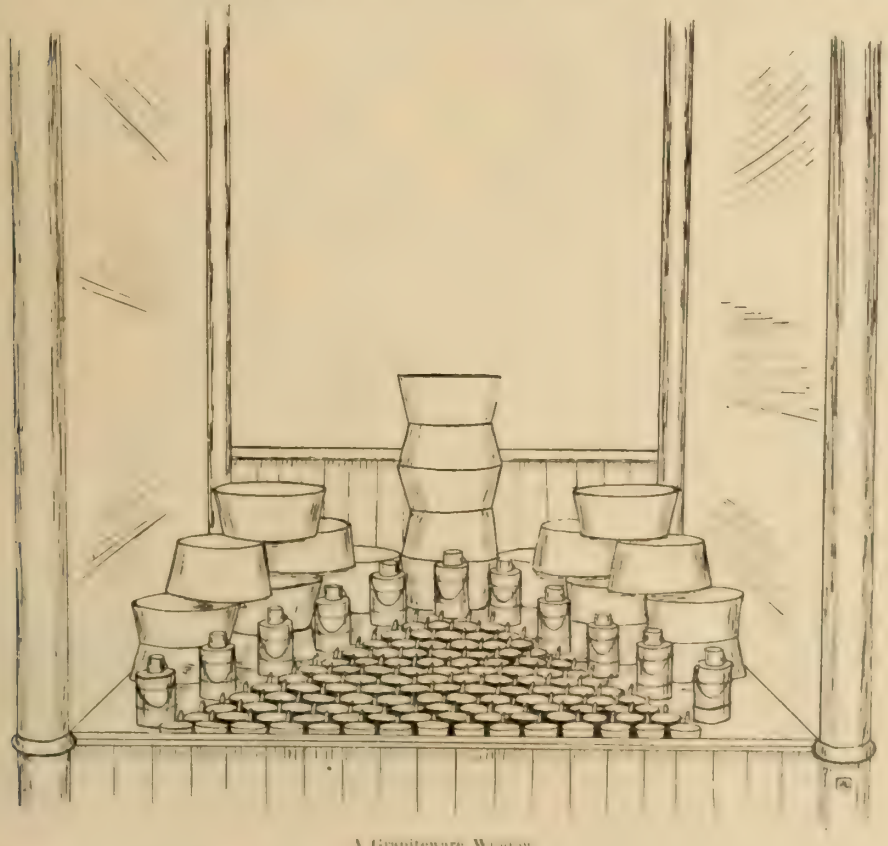
No merchant in these days attempts to succeed without spending much time, trouble and money over his windows. They are the index to his store. In his window he can show 50 things, while his clerk shows one, or, for that matter, ever gets the chance to show one.

Take the case of any successful merchant in a town and you will find every an honest, painstaking and thoughtful man.

We instinctively associate dishonesty and carelessness with untidy appearance, and often as we may be at fault in arriving at such a conclusion, we more often observe the truthfulness of our instincts.

The merchant who shows us a well planned window convinces us that the interior of his store is just as thoughtfully arranged, and we feel sure such care denotes also care in the selection of his stock, both as to quality and quantity.

The untidy, careless window assures us



A Graniteware Window

time that he depends very largely on his window display and store decoration. His competitors may be affable, good natured and jovial, but unless he is a positive boor the one with the good windoes does the business.

There are so many good qualities guaranteed in a merchant by his having a good window that people naturally trust him and feel sure of being suited in his store.

A man who is so artistically inclined as to produce a beautiful display impresses his customers and the people at large as of an untidy interior, and we turn away without any thought of entering if his competitor can please us with his window.

How could a merchant be so inconsistent as to exercise care in the selection of his stock if he cares not at all how that stock is shown.

Merchants often excuse themselves for paying so little attention to their windows by saying they are afraid to undertake it since they have no artistic inclinations and would therefore make only a failure of such attempts.

Every merchant has an assistant and with a little latitude any clerk should be able to arrange a window with some effect. If he can't do it there are others who can and even if you pay a trifle extra for an assistant with ideas that will increase your business, the profit accruing from such an investment should convince any thoughtful man that it is to his advantage to pay the little extra.

Another merchant will say that his business is the oldest in town, people know him and have dealt with him for years and will therefore continue to do so.

Such a man should not be in business. No matter what business he may have done in past years, a progressive merchant coming to town could, in a few months, capture almost all the trade that is worth getting.

Living on a past popularity is one of the dangerous tendencies of modern business.

In this pushing, bustling, hurried age a man must keep right up to the times. The old customer has not time now to go in and inquire if his old dealer has an article he wishes, but will do his business where the windows show him he can get what he wants without waste of time or words.

The business man must continue drawing trade by supplying the demand of the times and not sit content and rest on past laurels.

THIS WEEK'S ILLUSTRATION.

The display is made up entirely of saucepans, dinner pails and pans. In this window all the ware was graniteware, but lacking a supply of this tinware may be used, although the results are not as good. The saucepans are the small size arranged in a V shape from the front of the window. Around the sides are the dinner pails, and back of them again the pans can be built up in any desired way. A great number of variations may be made of this window.

FROST ON THE WINDOWS.

In many stores where the windows cannot be separated from the store frost very often obscures the view. There are different methods of removing and preventing the frost. The best is with an alcohol lamp, the heat of which being very evaporates the frost and dries the glass. Salphuric acid applied with a cotton cloth sweet, allowing no dropping, glycerine and aqua ammonia have all been used successfully. The sulphuric acid is the best, as the ice

of aqua ammonia keeps the frost off for only a short time. Aqua regia, hydrochloric acid, alcohol, benzine, nitric acid or caboli nitrate all work more or less successfully. The Dry Goods Review gives a formula as follows: Equal parts of water and glycerine with a few drops of ammonia (which must be dissolved in warm water) added. If the pane is rubbed with this, frost will not gather.

Some dealers are adopting the scheme of using the frosted window as a counter and spending more time on store decoration. In the window are placed the scales, paper bags, string and a miniature counter built up of canned goods. In this case even if the frost disappears a unique window display is the result.

AN IRON FIRM'S ENTERPRISE.

THE Times and Mirror, Bristol, Eng., in its issue of January 6, says:

"We have been officially informed that a contract has just been concluded between John Lysaght, Limited, the well-known firm of ironmasters, galvanizers, and constructional engineers, of St. Vincent's Ironworks, Bristol, and Houlder Brothers & Company, Limited, of London and Liverpool, under which the fine steamers of the Houlder Line will load regularly with galvanized iron and other general cargo at Avonmouth Docks for Buenos Ayres and other River Plate ports.

"This, the latest enterprise of Messrs. Lysaght, will enable other manufacturers and exporters in the district to ship their goods direct from Bristol, instead of from Liverpool or London as hitherto.

"We understand the local agents for the new line are Bethell, Gwyn & Co., 40 Corn street.

"It is with much satisfaction that we make this important announcement. The boats belonging to Houlder Brothers are familiarly known as 'the Grange' steamers, from the use of the word 'Grange' in their names.

"They are large steamers, and among them may be mentioned the Haversham Grange (11,200 tons), the Beacon Grange (11,000 tons), the Oswestry Grange and the Drayton Grange, (10,000 tons each), and the Langton Grange (9,200 tons).

"For the present the sailings will be monthly, but should the enterprise be supported as it ought to be, a more frequent service will be established.

"This is the third direct line of steamers which the port owes to the public spirit of Messrs. Lysaght, the other two being the Australian and the South African. What is much to be desired is that the shippers of Bristol and the district will back up this great firm in their practical endeavors to make the fullest use of the port of Bristol."

SCHEMES TO ATTRACT VISITORS.

I. N. FORD, the London, England, journalist, recently cabled an interesting article in regard to the schemes practiced by some of the towns in England to attract visitors—some of which might be initiated by towns in Canada. In part Mr. Ford says:

"The Harrogate Corporation owns the baths and springs which are the chief source of the town's wealth, and it has improved the estate by expending over $700,000 in the construction of winter gardens, concert rooms and a theatre, and in opening parks and promenades. Bath, in the west, has witnessed a similar series of improvements, the hot and cold springs being owned and managed by the Town Council, and the grand pump room and the Roman promenade being municipal works. Each of these watering places has a municipal electric supply, surpassing in this respect Leamington, in Warwickshire, which also conducts its baths, mineral springs and pump-rooms as municipal enterprises.

"The seaside resorts are improved and embellished by the town corporations with equal energy and enterprise. Scarborough has its new marine driveway and seawall around the castle; Torquay has its baths, concert-rooms, promenade piers and marine gardens, and Eastbourne has transformed its sea front and introduced electric lighting. The Doncaster corporation owns the famous racecourse which attracts throngs of visitors, and so shrewdly have the councillors supplemented their revenue from it by profits from gas, water and electric supplies that they are enabled to discontinue the borough rate and even to dispense with the school board and to solve the religious question without the meddlesome intervention of Parliament. The corporation, with the racecourse behind it, has made financial grants in aid of Anglican, Wesleyan and Roman Catholic schools, yet has retained for itself and for the parents of the children the privilege of representation in the management."

LARGE TRADE IN GAME TRAPS.

Henry G. Allen, representing The Oneida Community, Limited, Niagara Falls, Ont., passed through Toronto early this week enroute to Montreal and the Maritime Provinces. To a representative of HARDWARE AND METAL, he said that his firm was experiencing a large business in game traps, the sale of which, particularly in Manitoba and the Territories, was very large.

The trade might probably be interested in knowing that The Oneida Community, Limited, is introducing into Canada their triple-plus silver-plated ware, a large trade in which has already been worked up in the United States.

EVERY WHY HAS A WHEREFORE.

When Henderson & Potts sent out their New Year's greeting cards, they were agreeably surprised to receive the following post card from one of their customers in North Sydney, C.B.:

BENT & COHOON, Importers of Hardware, Etc.

DEAR SIRS,—With best wishes to you and yours for this new year, 1903, and that when you take up your ANCHOR to start out on the voyage for business again you will find that PURE friendship will stick to you like Henderson & Potts' paints, and that your orders will be as heavy as LEAD.

This is a GENUINE wish from,

Yours sincerely,

H. F. COHOON.

NORTH SYDNEY, C.B., January 12, 1903.

BUSINESS FOR SALE.

A BARGAIN FOR A QUICK BUYER! W. R. Singleton & Son, Carleton Place, have all the tinsmithing business they can attend to, and offer their $2,000 hardware stock at cost, along with a splendid coal trade, and shop rent free. No better opening in the Ottawa Valley. No money required with good security. (5-6)

STOVES AND TINWARE

AND ALLIED TRADES

COLLEGE FOR TINSMITHS WANTED

THE agitation for technical education is rapidly gaining support. While the following breezy argument by the Stove and Hardware Reporter betrays an unnecessary bias against classical education it emphasizes a sentiment in favor of more practical study that exists in the trade throughout Canada as well as in the United States: This is the day of technical education. The technical educator is supreme, and the old-style, classical educator, with his dead languages and his still more worthless metaphysics, is rapidly nearing his merited, or unmerited nirvana. We moderns may well pity our forefathers, who wasted years in useless study of languages that no man speaks, or in wrestling with a "philosophy" that virulently discussed the question of how many angels could dance on the point of a needle.

For the stove man and the tinsmith, the plumber and his helper, to do things in the best and quickest way demands a whole lot of knowledge, both theoretical and practical. In the old days of seven-year apprenticeships the workshop was a sufficient good place to get this, with the master under bond to convey all his secrets to his apprentice. In those days, too, the knowledge that a workman could or should possess was much less than it is now. At the present time, when some trades are supposed to be learned in six months, the amount of knowledge of theory that should be known and of facts that a man should be familiar with have immeasurably increased, and even the powerful aid of all the technical journals are insufficient to supply the workman's needs.

We want a good technical school for the workmen of our craft, just as much as the engineer or the chemist needs one. We want a school or institute, not only in the daytime, for the young man who is beginning to learn, but for the older workman who wishes to improve himself after working hours and for the skilled workman who wishes to keep thoroughly up-to-date in everything and take a "post graduate" course. It is probably better that the young man should not attempt to complete his technical education before he throws himself upon the world to earn his living, but he should never fail to go back to the school again. He will then know better wherein he is deficient. He will more fully appreciate his opportunities for getting knowledge, and, instead of learning in a perfunctory manner, by rote, parrot-like, he will feel a living interest in his questions and "go after them with a club."

This is a matter that our trade associations in every State should give help to, both moral and material, and if a good and promising beginning were made, some of our millionaire manufacturers might give substantial aid.

STOVES AND RANGES DEARER.

An advance of 5 per cent. net has been made in the price of all stoves, ranges and hollow ware, except steel ranges, steel cooks and base-burners. The price of several sizes of furnaces has also been advanced.

The principal cause of this rise in prices is the enhanced cost of raw materials and of labor. "When prices were arranged last season," said one prominent stoveman, "we were paying about $16 to $17 for pig iron, $4 for soft coal and $4.50 for coke. We have paid this season from $23 to $25 for pig iron, $8 for soft coal and $10 to $12 for coke. Moreover, we are having great difficulty in getting the amount of coke we need.

"In fact, conditions are such that prices had to go up. The market is, too, in a condition to stand it, as the demand last season was exceptional, and already there is abundant indication of another good year."

AMONG THE TRADE.

The Toronto Sheet Metal Workers' Union are now meeting frequently to consider whether they can force the employers to give them another increase in wages.

The Niagara Falls, Ont., Machine and Foundry Company are contemplating the erection of a foundry in order to fill some large contracts which have been offered them.

J. W. Driscoll, manager of The McClary Mfg. Co.'s Winnipeg branch, spent the past week in Toronto and is now spending some time in London before returning West. Mr. Driscoll is accompanied by his wife.

A blaze started in the floor above the engine room in Kerr & Coombes' foundry, Hamilton, before 7 o'clock on Saturday morning, the engine-room being situated in a three-storey wing of the main building. The floors and windows were considerably scorched. The loss is estimated at about $300.

GOOD WISHES FOR JAMES CARRON.

James Carron went to Montreal on Friday to attend the tin wedding of a friend. On his return to-morrow he will proceed to Toronto to be present at the annual banquet of The Gurney Foundry Co., of which he is one of the most popular travellers on the road, says the Brockville Times. It will be pleasing news to Mr. Carron's host of Brockville friends to know that he has entirely recovered from an illness which at one time threatened his life. In consequence of physical incapacity he has not made a trip for the firm in the past year. He hopes, however, to resume his route by February 1. He is a Brockville boy who is a credit to the town, and all will join in wishing the genial "Jimmy" continued success. He tips the beam 10 lb. heavier than at any period in his life.

HOW TO HEAT A VILLAGE HOUSE.

ALTHOUGH hot-air furnaces, hot-water and steam are invading the country, yet the majority of village houses are stove heated, and, as a result of defective arrangement, are very poorly heated, especially when the mercury falls below freezing, says Dr. Harvey B. Bashore, in a recent issue of The Sanitarium.

In stove-heated houses the halls are always cold, and, in addition, even in the rooms containing stoves, the floors are from 6 to 8 deg. colder than the temperature 4 or 5 ft. above, a fact easily proved by experiment. As a consequence, one's feet are just so much colder than head and shoulders. These two defects, cold halls and floors, are certainly factors in producing catarrhal inflammation of the throat and nose, if nothing worse. To reduce these defects to a minimum, it is necessary to alter somewhat the construction of the rooms. Everyone knows the value of the open grate, not so much as a heater, but as an equalizer of room temperature, and herein lies our remedy. Every room should have such a grate, or its equivalent, simply an air shaft connected with the the chimney, and opening into the room at the floor level. An air shaft so arranged, and of suitable dimensions, answers almost as well as an open grate, and furnishes the means whereby rooms may be heated very well with ordinary stoves.

When a room which has no fireplace is heated the heated air rises and spreads along the ceiling in a thick cloud, and if a window is opened the warm air rushes out before it has done much good; if, on the other hand, there is an open grate, some of the hot air, escaping up the chimney, creates a partial vaccum; this, consequently, creates in the room a movement toward the opening, and the upper heated air is more diffused about the room, making the temperature more uniform.

The halls, whether they contain a stove or not, should have an air shaft, for it will assist somewhat in "sucking out" the heated air of the adjoining rooms. A small oil heater, placed in the lower hall, will be of assistance in keeping the hall temperature at the right point.

THE GURNEY-MASSEY CO., LIMITED, MONTREAL.

Established 1860. Incorporated 1865.

"Eureka" Cheese Factory Milk Cans.

PATENTED JANUARY, 1901

BROAD HOOP PATTERN.

Made of 22 gauge, no centre hoops. Always supplied swedged unless ordered otherwise.

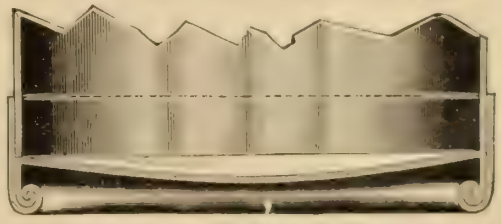
We also make "Eureka" Cans, 24 gauge, with centre hoops; and old style Cans with either slip or rest covers, swedged or not swedged.

Milk Cans and Milk Can Trimmings.

"FLUSH" SIDE HANDLES

Means no more bruised, nor broken milk cans, as is the case with protruding handles.

(See how the outer Rim and Inner are rolled in.)



SECTION OF OUR PATENT MILK CAN BOTTOM.

This demonstrates the popularity of

Davidson's Patent Milk Can Bottoms.

YOU should buy our Milk Cans and Trimmings, because our Broad Hoop Bottom has all the advantages of a seamless bottom without the strain that spinning entails. The rim is turned in with edge of bottom, giving double durability and heavy rolled edges that will not tear factory floors nor waggons.

They have no air spaces, which make soldering difficult, but sufficient space is left between bottom proper and rim to allow body of can to be inserted ¼ of an inch, making permanent joint.

Bottoms are thus sweated in with half the solder.

Bottoms are concave, draining to the centre, therefore are easier to wash out.

They will not corrode like those which drain to the side. They have flush side handles.

Top bands are "SHOULDERED" and have cut out at joint, making neater and cleaner job in half time than with old style hoop.

All bands have retinned edges.

For durability, finish and economy in making up, our Trimmings are unequalled.

The Thos. Davidson Mfg. Co., Limited. Montreal, P.Q.

INDUSTRIAL GOSSIP

PROFESSOR CARPENTER and the other promoters of the immense cement works at Belleville, Ont., are in that city preparing plans, etc., for the proposed industry. In addition to large works, the organizers of this concern propose to erect boarding houses and cottages for their employes.

J. J. Graham has sold his sawmill and hoop machinery at Uttoxeter, Ont., to The Sutherland-Janes Co.

J. E. Murphy, of Meaford, Ont., is asking for inducements from Fort William, Ont., to erect a large sawmill there.

The Hamilton Steamboat Company are thinking of putting a larger and faster boat on the route between Toronto and Hamilton.

John Lewis intends starting a shoddy mill at Berlin, Ont., to employ 20 men. He will ask Berlin for a loan and water connections.

The 250 employes of The McKinnon Dash and Metal Works Co., St. Catharines, Ont., have returned to work, after ten days' strike.

The C.P.R. has bought a large lot of land, valued at $25,000, in Fort William, Ont., but have not yet announced the use to which they will put it.

The erection of The Dominion Belt Fencing Company's factory in Hamilton, Ont., has been commenced, and it is expected it will be ready for occupancy within two months.

The Guelph Radial Railway Company will seek incorporation from the Ontario Legislature at its next session. This company desires to take over the Guelph, Ont., street railway, and construct extensions to or through Elora, Fergus, Mount Forest, Arthur and Erin, and from Puslinch Lake to Galt, from Puslinch Lake to Hespeler or Preston.

Cement was a scarce commodity last season, and from the increasing demand each year, it is probable that it will be still more scarce during the coming season, says The Winnipeg Telegram. The Manitoba Cement Company, which will build a plant next summer, is already receiving inquiries for prices on carlots by farmers intending to extend their buildings, and dealers throughout the West.

A Vancouver despatch says that M. K. Rogers, representing The Standard Oil Company, is negotiating for the coal areas of The Nicola Valley Coal and Iron Company. The coal, which comprises nine seams, varying from five to 20 feet, will be used for coking purposes in connection with the nickel-plate smelter operations projected. There is no railway in the Nicola Valley, where the coal is situated, thus the coal, which can be bought for a paltry $100,000 or so, adds the despatch, will some day be worth millions, for the country is enormously rich in minerals and other resources.

THE ELECTRIC ROAD FROM WINDSOR.

The United Railway Company, of Detroit, Mich., has nearly completed a line from Windsor to Amherstburg. The company bought the right of way from the property owners adjacent to the highway, so that the roadbed is not in the highway proper, as in most cases. Seventy-pound steel rails, made in Sault Ste. Marie, Ont., are being used. All bridges are of steel and the cars will be of the latest suburban pattern. The road follows the bank of the Detroit River all the way from Sandwich to Amherstburg, a distance of 15 miles. It passes through a rich and thickly-settled territory. Amherstburg has already become a favorite summer resort, especially for Detroit people. During the season of 1902, the Detroit, Belle Isle and Windsor Ferry Company brought about 150,000 passengers to Amherstburg and to Bois Blanc Island, in the Detroit River. The electric road will make this place much more desirable for summer residences, and property has already advanced largely in value.

TO MAKE GALVANIZED IRON.

Great progress is being made in installing the plant at the pipe mills, says The Guelph, Ont., Herald. The furnaces and machinery are now being put in and it is thought the mills will commence operations by April 1. The management have decided to build a foundry early in the spring to manufacture galvanized iron. This will give employment to 50 additional workmen. It has also been decided to manufacture their own iron here, and the company will build rolling mills before next winter. The capacity of the new rolling mills will not be less than that of the White mills, which lately moved to London, Ont., and will give employment to about 75 men. The state of the iron-pipe market is now such as to warrant these extra additions to be made to the business." At present the demand for pipe is nearly double what can be turned out of the existing mills in Canada.

THE SAULT STE. MARIE INDUSTRIES.

A despatch from Boston, after announcing that Gordon Abbott, of that city, has been elected to the board of directors of The Consolidated Lake Superior Company, states that while F. H. Clergue will probably continue in charge of the various "Soo" properties, he will not have the free hand he has had heretofore. It is believed that assistants will be appointed, with authority over certain departments entailing expenditure. It is felt that Mr. Clergue's management has been almost too progressive and not as economical as it might have been. It will probably be two or three years before there will be any dividend returns upon Consolidated Lake Superior stock. The properties are all right, but the growth has been too fast, and the policy of the Pennsylvania Railroad people, who are now in the management, will be to bring the present properties up to a substantial earning capacity and place the company upon a strong financial basis, before extending the plant or paying out any dividends. To date about $25,000,000 cash has gone into the Consolidated Lake Superior properties, and it is quite likely that some plan will be evolved to make the outstanding securities more nearly represent in par value the money that has gone into the proposition.

SPORTING GOODS.

From now onwards the hardware trade should give considerable attention to the sporting goods trade, as that branch of business can be readily developed by watchful attention. The advertisement of Nerlich & Co., Toronto, in this week's issue, is, therefore, well worthy of careful reading. This firm are agents for "Crown" brand sporting goods, which they insist are "equal to the best, bar none." Particular attention is being devoted to baseball, lawn tennis and lacrosse goods, which, they state, yield an unusually good margin of profit to the retailer, are purely of Canadian make, yet are equal to any imported goods. Their "Crown" league baseball is guaranteed to be of highest grade. The new spring catalogue of this firm's lines is now being prepared. A card requesting this catalogue will ensure prompt delivery to readers of HARDWARE AND METAL.

O. Lambert & Co., general merchants, Shawenegan Falls, Que., have registered.

PAINT, OIL AND BRUSH TRADES

TO MAKE WHITE LEAD A NEW WAY.

WHITE LEAD is to be made in St. Louis by a new process, the invention of Willson H. Rowley, who is at the head of a recently organized company bearing his name, and which is said to be substantially backed financially. This new process has been the subject of some discussion in trade circles, and a description of it is of interest.

The lead is melted in a kettle, heated by a furnace, and kept at the lowest temperature sufficient to retain it in a liquid state and yet permit it to flow rapidly. It is then run through a vertical pipe, attached to the bottom of the kettle, into an air-tight chamber below, where the lead is atomized into a lead powder by coming into contact with moistened steam, which is discharged into the chamber under high pressure. The atomized lead is then carried along in its powdered state by the pressure of the steam and is discharged forcibly into a basin of cool running water. The result thus far is a powdered lead almost entirely free from any high oxide and containing but slight oxidation, if any.

At this stage of the process the pig lead has been reduced to a fine powder and is now ready for the various stages of oxidation. It is first immersed in water in an open basin, which permits of a partial combination of water and oxygen in the plastic mass of lead. This change is then further faciliated by stirring and drying the mass in the open air and afterward by agitating it in a drum by means of blades, at the same time sprinkling the lead with water, allowing the lead to gradually take on oxygen. When thoroughly oxidized, the mass of metal is discharged into a rotating drum and subjected to a stream of carbonic-acid gas to form white lead, according to the well-known principle that the protoxid of lead will freely take up carbonic-acid gas and form a basic carbonate of lead.

VARNISHES DEARER.

As a result of the rising turpentine market varnishes have, during the past month or so, become decidedly stiff in value, dealers now quoting a rise of 10 to 20c. per gallon in all turpentine varnishes.

It seems quite reasonable that the price of varnishes should be higher, when the cost of the principal raw material is nearly 90c. more than was the case when turpentine ranged around 50 to 60c. This rise will not, however, be as large as it would be if many of the varnish makers had not been fairly well supplied with stocks of turpentine before the recent heavy advances in that material.

THE TURPENTINE SITUATION.

THE strong feeling regarding turpentine which has been manifested on the Canadian market for some time is becoming acute, owing to the bullish advices from Savannah. On Wednesday, The N. Y. Journal of Commerce reported the market in New York as follows: "There was a considerable increase in the local activity here yesterday, and the demand appeared much stronger than for some time past. The market opened at 62½c. for machines and 62c. for oils, but very soon these prices stiffened and later on sales were reported on the basis of 63½c. for machines. The market finally closed very firm at 63½c. bid, with the majority of holders asking 64c. A week ago prices ranged from 61 to 61½c. This, it will be remembered, was for wine gallons.

The advance noted here this week is 3c. per gallon, which, coming on top of an advance of similar amount the previous week, is pretty stiff, but seems to be sustained by the conditions, as holders are steadily forcing the market upwards.

PAINT MEN PLAY HOCKEY.

The Sherwin-Williams and Canada Paint Companies' hockey teams played a match on Tuesday night at the Victoria Rink, Montreal, which resulted in a draw—two all. The play was very fast throughout and the absence of roughness speaks well for the good feeling that exists between these teams.

ABANDONING FUEL OIL.

One result of the high price of both crude and refined oil is that many manufacturers who had started using oil as fuel, instead of coal, have returned to the latter, after considerable trouble and expense. It is believed they are not likely to again start using oil as fuel because of the opinion that The Standard Oil Company, who control the situation, are likely to act in an arbitrary manner at any time.

PAINT AND OIL NOTES.

Several Toronto master painters have announced their intention of granting the 5c. per hour increase of pay asked for by the Painters' Union.

The Toronto Master Painters' and Decorators' Association held a banquet in the Temple Building on Thursday evening, last week.

A largely attended meeting of the Master Painters and Decorators of Montreal was held on Wednesday evening last week, at which it was decided to reorganize the old Association, which, for the past few years has almost ceased to exist. Messrs. Murphy, Gauthier and Jones were appointed a committee pro tem for the consideration of matters relative to reorganization, and to prepare for the next meeting, when officers will be elected and the organization perfected.

PAINT AND OIL MARKETS.

MONTREAL.

AS stated in our last week's review, the turpentine market has advanced and it would cost fully 85c. to lay it down in Montreal from the southern markets. However, 85c. is still quoted as the selling price, but should this firmness continue, in all likelihood the quotations will be advanced 2½ to 5c. per gallon. Stocks are extremely light, as holders do not care to tank up at the present high figures. An active trade is doing in liquid paints, and the outlook for spring shipments is so bright that some manufacturers are working overtime. The inquiry for white lead is unabated, and the market will soon be as bear as the coal market. There is a steady demand for paris green and the prices are very firm. Linseed oil remains unchanged and is somewhat quiet. We quote:

GROUND WHITE LEAD.—Best brands, Government standard, $5.00 to $5.25; No. 1, $4.27½ to $1.87½; No. 2, $4.40 to $4.50; No. 3, $4.02½ to $4.12½; No. 4, $3.65 to $3.75 all f.o.b., Montreal. Terms, 4 months, or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—$5 in casks, and in kegs, $5.25.

DRY WHITE ZINC.—Pure dry, in casks, 6¼c.; in 100-lb. kegs, 6¾c. No. 1 zinc, in casks, 5¼c.; in 100-lb. kegs, 5¾c.

WHITE ZINC (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No.2, 6c.

PUTTY.—We quote: Bulk, in barrels, $1.80 per 100 lb.; bulk, in less quantity,

Your Money Back—

Your Money Back is what you can offer any purchaser of a can of "Ark Brand" Paint who uses the same according to directions and finds it unsatisfactory.

Dealers find our guarantee to refund the purchase price of "Ark Brand" in case it is not satisfactory a great selling feature of our paint.

"Ark Brand" is an honest paint, that will not crack, chalk, or peel, and that always gives splendid satisfaction.

It yields the dealer a nice profit, increases his business, and proves one of the most substantial branches of his business.

Write for prices and the booklet, "Paint; What to use and how to use it."

The booklet tells the experiences of many dealers who have built up immense businesses handling "Ark Brand."

—

TORONTO.

The market is active; more so than is usual so early. Most interest is being centred in turpentine, which continues to rise at the primary markets. There is an advance of 3c. per gallon here. White lead is gathering strength, owing to a better feeling among the grinders, who seem to be tired of the recent price-cutting. Linseed oil is also strong in tone, owing to the advance of prices in England. Paris green is reported higher in the United States, but there is still some cutting on this market. Varnishes have been affected by the rise in turpentine and advances of from 10 to 20c. are noted. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5 to $5.25; No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½.; No. 4, $3.50 to $3.75 in packages of 25-lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. pkgs.; genuine dry white lead in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.50; ditto, in kegs of 100 lb., $5; No. 1, in casks of 560 lb., $3.75; ditto, in kegs of 100 lb., $4.25.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In 5 gallon lots, 60 to 75c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb.; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c. per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.25 to $2.35; white, $2.35 to $2.45 per gal.; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8½c. per lb.; cabinet glue, in bbls., 12c.; emery glue, in bbls., 17½c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.10; bladders, in 100-lb. kegs, $2.25; bulk in barrels, $1.80; bulk, less than barrels, and up to 100 lb., $2.05; bladders, bulk or tins, less than 100 lb., $2.75.

PARIS GREEN.—Petroleum bbls., 14c. per lb.; arsenic kegs, 14½c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. packages, 16c.; ½-lb. packages, 18c.; 1-lb. tins, 16c.; ½-lb. 18c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 9 to 9½c. per lb., and 10 to 10½c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 89c.; 2 to 3 bbls., 88c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

GASOLINE AND BENZINE.—We quote as follows: Benzine, 19¼c. and gasoline, ordinary, 21¼c. and engine, 22¼c. f.o.b. Toronto.

—

WINDOW GLASS.

MONTREAL.

This being the dull season for glass there is not much stir in the market. Locally there is, however, a fair trade being done and the prices are firm. We quote: First break, 50 ft., $2; second, $2.10 for 50 ft.; first break, 100 feet, $3.80; second break, $4; third break, $4.50; fourth break, $4.75.

—

TORONTO.

There is no change. Prices are being well maintained and a good stock business is reported. The import demand is well up to the average. We quote as follows: Under 26 in., $4.25; 26 to 40 in., $4.65; 41 to 50 in., $5.10; 51 to 60 in., $5.35; 61 to 70 in., $5.75; 71 to 80 in., $6.25; 81 to 85 in., $7; 86 to 90 in., $7.75. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days. Discount, 15 per cent.

THE DEALER

who secures an agency for "ANCHOR" LIQUID PAINT can enter the field confident that he can supply his customers with the best goods on the market.

IN THE CASE NOW PENDING

wherein Hardware and Paint Dealers everywhere are the judges, the people of Canada and other countries the jury, and **CHURCH'S COLD WATER**

ALABASTINE

for twenty-five or more years on trial, it is very evident that **ALABASTINE** is the only wall-coating in demand

The judge in charging the jury stocking **ALABASTINE**—and the jury in rendering the verdict—buying and using **ALABASTINE** have shown conclusively that the claims of the **ALABASTINE COMPANY** have been clearly and emphatically established. The evidence submitted is in order as follows:

SUPERIORITY—To sell goods of any other manufacture, the dealer **must** recommend them "the same thing, or, as good as ALABASTINE."

DURABILITY—ALABASTINE is manufactured from a cement base; can be recoated, and hardens with age, a claim that no other manufacturer has substantiated.

ARTISTIC BEAUTY—Made in twenty beautiful tints and white. Any degree of decorating can be done with ALABASTINE from plain tinting to the most elaborate in relief decorating known to the decorator's art.

IS SANITARY—Sanitarians condemn in strong terms the use of wall paper for the walls of living rooms, on account of the poison used in its manufacture, and the decaying mouldy paste on the back of it. Kalsomines that rub off on everything that comes in contact with them are not to be recommended. Physicians all agree that "walls to be healthy must breathe." ALABASTINE is porous and permits the free passage of air

IS CONVENIENT—Being ready to use by mixing in **cold water**. The inventor of this process, Mr. M. B. Church was the first to produce a wall-coating to be mixed with cold water that was practical. This feature is patented in Canada and other countries. ALABASTINE in this form has absolutely displaced hot water preparations, and forced kalsomine manufacturers, at the risk of patent infringement, to attempt to imitate this process.

In accordance with above verdict and the facts stated, this court hereby affixes the great seal of the manufacturers of the greatest wall-coating to be found anywhere in the world.

The trade supplied by Wholesale Hardware and Paint Dealers. Also by

THE ALABASTINE CO., Limited,

PARIS, ONT.

MONTREAL BOARD OF TRADE

THE result of the election of officers to the Montreal Board of Trade was that Arthur Hodgson, of Hodgson Bros., produce and commission merchants, was made president, in a well-contested battle with Alex. McFee, the retiring president. The other officers were: 1st vice-president, Geo. E. Drummond; 2nd vice-president, W. L. Gear; treasurer, James Davidson; council, H. B. Ames, R. M. Ballantyne, Jas. Carruthers, George B. Fraser, E. F. Hebden, Robert Ironside, D. L. Lockerby, Charles Meredith, James Thom, Hugh Watson, W. W. Watson, J. T. Wilson; members of board of arbitration, Robert Archer, Robert Bilkerdike, M.P., Jas. Crathern, F. W. Evans, E. B. Greenshields, J. C. Holden, John MacFarlane, Hon. Robert Mackay, John McKergow, Henry Miles, Robert Munro, Chas. F. Smith.

President Hodgson, in a few brief remarks, thanked the voters for the honor done him. He attributed Mr. McFee's defeat to the fact that the one year term had been made the issue, and complimented the late president on the good work he had done while in office. The present year was an important one, in view of the opening of the new Board of Trade Building and the coming of representatives of the Chambers of Commerce of the Empire. He thought business men did not take enough interest in public matters, and urged all members to work for the welfare of trade during the coming year.

W. L. Gear, in moving a vote of thanks to the retiring president, made some appreciative remarks of Mr. McFee's work during 1902, not only in Canada, but in Great Britain. George E. Drummond seconded this, speaking in the same strain.

Robt. Meighen and other members of the board expressed their regret at the defeat of Dumont Laviolette as a member of the council. He was a French-Canadian, and it was thought that at least one member of that race should be represented.

SPECIALTIES FOR HARDWAREMEN.

The J. Nicklin & Co., hardware specialty manufacturers, of Birmingham, England, are turning out some excellent goods for the 1903 trade. Their principal lines are curtain rings, tin blind rings, brass-rimmed tablets, curtain hooks, and various other articles. This house is one of the best in England, and has an enormous home trade, while their export business to the various colonies is quite extensive. On another page the advertisement of this firm is to be seen, illustrating a few of their leaning lines.

"Make Assurance Doubly Sure."

IF you are interested in good paint and desire to extend and improve the value and character of your business "stand not upon the order of going," but proceed at once to the post or telephone office and order a supply of the

The fact of the **Canada Paint Company's** name being on the package is a guarantee of its excellence Their Paris Green is the best that is made.

HEATING AND PLUMBING

RADIATORS IN GREAT BRITAIN.

IN his inaugural address before the Institution of Heating and Ventilating Engineers, President Louis F. Pearson made the following references to the use of radiators in Great Britain :

"There appears to be a general consensus of opinion that radiators are neater than plain pipes, and cheaper and more effective than coils with coil cases ; but in my opinion we have much to learn respecting effective radiating surface. Many heating engineers appear to think that so long as they purchase radiators rated at the requisite number of feet of heating surface, it is quite immaterial what that surface is, but if they carefully test the work when completed, they will find that there is a great difference in the heating power of various patterns. We may take it that, as a rule, the lower and narrower the radiator and the greater the space between the loop or tubes (that is to say, the more completely the surface is exposed) the better will be the result, both as regards the amount of heat transmitted per square foot of surface and the greater facility for cleaning. I may also say that I have found radiators with large internal or flue surfaces give very poor results, unless connected with the outside air as ventilating radiators, and even then it is doubtful if more than 75 per cent. of the surface is effective.

"There are a considerable number of nickel-plated radiators being used for hospitals, etc., at the present time, and, though they are easily cleaned, I cannot think that it is a reasonable way of treating heating surface, for it must considerably diminish the radiating power ; though I have not yet been able to ascertain to what extent the efficiency of the radiator is impaired. It is common knowledge that a well-polished teapot retains the heat longer, and therefore makes better tea, than one with a dull, rough surface. You will have also noticed that polished fire-irons lying close to a hot fire are comparatively cool, and though, of course, the latter is a case of absorption of heat, I take it that what induces rapid absorption of heat will also induce rapid radiation.

"Another domestic appliance which is a good example of the way coil cases and tops to radiators reduce the heating power of coils and radiators is the ordinary fire-guard. I have found them reduce the temperature of a room from five to ten degrees, even though the wire meshes are half an inch centre to centre. Tops of radiators, besides impairing the efficiency of the heating surface at least 10 per cent., also harbor dust and dirt, a very serious consideration."

Again, after referring to dust as the chief cause of London fogs and of much sickness in that city, President Pearson says : "This must necessarily affect the planning of heating and ventilating installations, and also explain why doctors have recently made such a strong point of all radiators and heating surfaces being made so that all parts can be easily and quickly cleaned, especially when intended for hospital work. It appears to me that in view of the above remarks that coils in coil cases, radiators with loose tops and with inaccessible enclosed surfaces, pipes in trunks with open grates over them, brick flues for admitting fresh air that cannot, and will not, be thoroughly cleansed. Coke screens, as often used in the Plenum systems, and indirect radiators with the so-called "pin" surface, in fact, any form of apparatus which either collects or conduces to dust, stand self-condemned, and, therefore, should be carefully avoided. It is a well-known fact that most healthy people breathe principally through the nose, and that more delicate ones generally through their mouths. The advantage of the former method, of course, is that by breathing through the nose we utilize nature's screen, which consists of a number of fine hairs, which filter the air as it passes into the lungs. This natural hair screen, or filter, to work to the greatest advantage should be moist, which I presume is one of the chief reasons why dogs, cats and other animals have generally a cool damp nose when in good health. Heating and ventilating must go hand in hand with sanitary science, and the laws of health carefully considered, if we are to be progressive and successful in our work. As a rule, we cannot do better than copy nature as nearly and as faithfully as circumstances will allow, and it would, therefore, appear that screens or air filters were used in connection with heating and ventilating should be composed of hair, and kept constantly moistened (the latter precaution is generally taken I think), though I am not sure whether hair has been tried as a material for screens. Where ventilating radiators are used for heatiug the incoming fresh air I see no reason why they should not be fitted with a removal screen, and if duplicate ones were supplied they could be removed and thoroughly washed at stated periods."

BUILDING NOTES.

THE Burton Building Co., Hamilton, Ont., who are to build 40 houses near the new Dearing works, have given the contract for their erection to contractor E. D. Depew, the price being $36,700. Each house has a modern equipment as regards bath-room, etc., but the rooms generally are smaller than usual.

W. Galbraith proposes to erect a two-storey hotel and general store in Squamish, B. C.

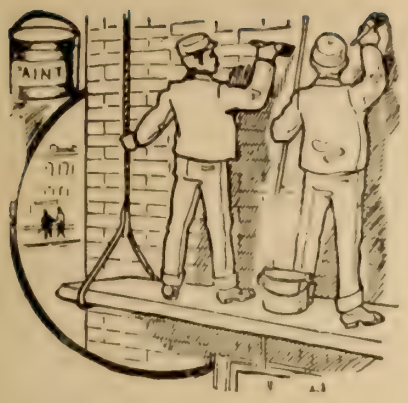
The Quebec Fire Assurance will erect a large office building in Quebec City. Hutchison & Wood, architects, Montreal, are preparing the plans.

Postmaster-General Mulock has decided to erect a new postoffice at the corner of Lisgar and Queen streets, Toronto. Three similar offices will be opened later.

The City and District Savings Bank, Montreal, have bought the "Hall" property on St. Catharines street, Montreal, and will alter these large premises to suit their requirements.

A. F. Maclaren, M.P., will furnish funds or will form a company for the erection of a large hotel in Stratford, Ont. The building will be five-storeys high and front on Ontario street, opposite the Albion hotel.

Winnipeg anticipates a building boon this year. Last year over $2,300,000 was spent in building operations, and greater activity is looked for. Among the proposed structures are the C. P. R. hotel and depot ; Union Bank building ; Carngie Library ; Manitoba Club on Broadway, back of the Hudson's Bay chambers ; Strange block on Fort street, near Graham avenue ; Bank of Ottawa building ; office for the Eastern Townships Bank, which purposes to establish a branch here ; factory and



Ramsays Paints For Business.

KINETIC HEAT.

This is a new device for giving uniform heat from a furnace, and is proving itself to be a valuable article in connection with such heating apparatus. It not only improves the heating powers of the furnace, but saves, it is claimed, from 40 to 50 per cent. of coal. The machine is placed on the side of a furnace and a small tube is attached to the water pipe, the water first passing into a filter and from there through a water wheel, which throws five small streams of water on the fire continually. It consumes the hydrogen of about 15 gallons of water daily. The directions are very simple and can be carried out by anybody. The machine as it stands to-day is for anthracite coal only, but in the near future it will be perfected for the use of soft coal and gas. It has proven a wonderful success in Montreal during the present season—so much so that the company have all they can do to supply the demand, and will be unable to put it on the outside market until next season. The business offices of The Kinetic Heat Company of Canada, Limited, are at 80 Drummond street, Montreal.

BUILDING PERMITS ISSUED.

TORONTO.

Geo. A. Craig, for a dwelling house near Bloor street on St. Clarence avenue, to cost $3,200.

W. A. Murray & Co., for $10,000 alterations to their store on King street; J. W. Siddall, architect.

A. Hawes, for an apartment house at the corner of Huron street and Sussex avenue, to cost $35,000; J. A. Berridge, architect.

PLUMBING AND HEATING NOTES.

A. F. Macpherson, plumber, Toronto, is making several improvements to his premises.

John Fleming, a respected master plumber and gas fitter, St. John, N. B., died at his home there last week.

Alderman Walsh, of Montreal, is still agitating for the appointment of an inspector of electric wiring in that city.

Wm. Cranston, plumber, of Winnipeg, spent a few days in Roland, Man., last week with his brother, Jas. Cranston.

The new steam-heating apparatus installed in the Brandon, Man., machine works, is now in perfect running order and gives splendid satisfaction.

Power & Corsitt, the new plumbing firm, who have lately taken over the business of Power & Co., Sydney, N. S., last week purchased the St. Lawrence house property on the corner of Charlotte and Falmouth streets, and will convert it into a business stand.

HINTS ON ADVERTISING.

By A. B. Caswell.

CHRISTMAS time with all its joys and its business hum is round the corner and almost another year must elapse before it is with us again. And now the merchant's thoughts naturally turn to the best methods of brightening up trade for the other eleven months of the year, and especially through the month of January, which is often hard-hit by the re-action of Christmas trade. If business was only as brisk all the year round as it is during December how soon many shopowners would be able to retire. But we cannot expect this. It isn't natural, as every business must have its "bull and bear" weeks. Dull weeks can be greatly lessened, however, by judicious management.

* * *

The enterprising merchant will not acknowledge such a thing as positively dull days, or, at any rate, very many of them together. If nothing turns up he will do a little "turning up" on his own account; he is always a-bustle, always devising something fresh to whet the public appetite. The dull season, far from being a reason for ceasing efforts, is a reason for re-doubling them. He looks about for the best and quickest remedy. It is here that his advertising will stand in good stead. There is a wise saying: "When business is good, that is the time to force it, because it will come easy. When it is bad that is the time to force it, because you need orders."

* * *

I am taking it for granted that you have been forcing business during the holiday season, advertising special lines, etc., and that it has come easy. And now is the time to force it because you need the orders. To do this, go through your entire stock, very carefully selecting lines that can be run out by a little extra push. But it is not my intention to suggest which lines to push. The grocer's knowledge and experience of what his customers will be more likely to buy, or what he can sell to best advantage should come to the rescue in this respect. All conditions are not the same, and the merchant must be guided by his own good judgment and knowledge of the conditions which he only can understand.

* * *

The trade of the average store naturally resolves itself into three classes, that is, the exclusive, which buys the highest-priced goods, the medium and largest class, which demands popular prices, and good quality, and the cheap trade, whose chief requirement is cheapness. The two first-named embrace those at whom advertising should be directed, unless a store specially caters to the buyers of cheap merchandise, in which case a somewhat different method is usually required.

* * *

Anything distinctively new is worth talking about, if you can safely recommend it. There are always a great many on the lookout for new things.

A SAMPLE AD.

Advertising pays best when it is better than the "other fellow's"; other things, of course, being equal. Give them something a little out of the ordinary. Is a town election impending, a public ball, a Masonic gathering? Is a Convention of Sons of This, the Daughters of That, or the Knights of Something Else in progress? Are the people keenly interested in some public improvement, the building of a new railway, a new enterprise, or court house—anything of moment, in fact? Then strive to incorporate a brief, bright reference to it in your advertising. Be on the alert to let the townpeople know that you keep abreast of affairs, that you are in close touch with their interests. This sort of thing helps a merchant immeasurably.

* * *

I have been asked, does it pay to be funny in one's advertising? Yes. If you have a natural turn for humor. It should never find expression, however, in cheap wit or vulgar punning. As a rule, slang is a good thing to let alone, although a few expressions of the better sort may be used whenever they fit.

* * *

As I have before advised in these columns, more and more the tendency in modern advertising is toward few phrases and short ones. This is a bustling age when each minute counts, and the busy man hasn't time for essays. To impress him you must rivet his attention at first glance, and then hold it to the end with terse and trenchant phrases. The time when the advertising writer scribbed dullness over a page is past. Unless the reader is taken captive by the opening sentence, it's pounds to pence that he won't pay the slightest heed to an advertisement. Involved and long-spun-out sentences merely tire the reader; the ideal phrase is short and sharp, like the crack of musketry. By all means turn a joke if you can turn one neatly, but remember that a fact is better advertising ammunition than a jest. Tickling the reader may be fun for the reader and fun for you, but the ad.-writer who is always on the tickle will find that the readers will ultimately refuse to concede serious moments to him. Learn to pen your phrases just as a speaker utters his—with a keen eye toward their effect upon the audience.

THE CALENDAR OF THE YEAR.

One of the handsomest things in the way of a calendar it has ever been our good fortune to see has been issued by the advertising department ol the Intercolonial Railway and Prince Edward Island Railway of Canada. It is a unique specimen of the lithographer's art, being an imitation of burnt leather or wood engraving, with the familiar moose head of the road as the central idea. The calendar bears the stamp of The Toronto Lithographing Company, Limited, and reflects credit on the work of that institution. We understand that copies of the calendar will be mailed to all those applying for them. A mention of "The Canadian Grocer" would confer a favor.

FRANK MILLER'S

HARNESS PREPARATIONS.

FRANK MILLER'S

HARNESS DRESSING

Recognized as

"THE STANDARD."

Produces a brilliant jet black gloss which will no peel or smut and to which dirt will not stick.

CEMENT TRADE NOTES AND COMMENTS.

THAT there will be a heavy production of Portland cement in Canada this year is assured. The formation of cement companies and the erection of factories has, during the past year or two, been so remarkable that competition has become very keen in past seasons, and imports have been reduced. New factories will be turning out generous quantities of cement this season, and a sale for this, in addition to the production of former years, will have to be found.

Naturally, some have feared excessive competition this year, and will be pleased to hear of the formation of a cement association which will tend to prevent such competition. But those who have examined the field closely will not look for the remedy from competition in such an association, but in an increased sale of cement. As mentioned a few weeks ago, there has been an exceptional increase in the uses to which cement is being used in building, paving and engineering operations, all of which are bound to be particularly active this year, not only in the Northwest, but in the older Provinces.

What effect will this have on the hardwareman? Simply that he can add materially to his cement business by keeping in touch with the new conditions, the new uses to which cement is being put. He can, moreover, get his supplies readily and at moderate prices, for there is little likelihood of excessive prices this year. Every hardwareman should study the cement trade, learn how it can be used to advantage, and then should start out to get his share of the cement trade of his district. If he is progressive, buys in fair to large quantities and pushes the line, he can make it profitable to himself in a short time.

TENDERS FOR 15,000 BBLS.

Tenders are being asked by C. J. Brown, city clerk, of Winnipeg, for 15,000 barrels of cement. Tenders must be in before 8.30 p.m. on Tuesday, February 17, and accompanied by cheque. Specifications can be had on application.

CEMENT MAKERS ORGANIZE.

A branch of the Canadian Manufacturers' Association, representing the cement-makers of Canada, has been organized, the object being to protect the interests of the trade. Last year American cement to the value of $699,000 came into Canada in spite of a duty of 12½ per cent. The Canadian manufacturers will not ask that this duty be increased, but will request strict interpretation and enforcement of existing Customs laws with regard to undervaluation. The officers of the new association are: Chairman, J. M. Kilbourn, Lakefield, Ont.; vice-chairman, F. G. B. Allan, Deseronto; secretary, R. J. Younge, Toronto. Executive, Messrs. Maitland, McLaughlan, Kilbourn and Kline, of Owen Sound; Stanhope, of Durham; Knechtel, of Hanover; Elliot, of Brantford; Morgan, of Longue Point, Que., and C. A. Masten, of Toronto.

THE MANITOBA CEMENT COMPANY.

The promoters of The Manitoba Cement Company state that they are making satisfactory progress in placing the stock of the company on the market. They place the cost of bringing cement from Ontario to Winnipeg at $1.20 per barrel, and claim that they can save this cost.

THE GERMAN CEMENT TRADE.

The efforts of The German Cement Syndicate to control the production and regulate the price of cement, have failed, and the Syndicate has been dissolved. In the last two or three years, so many new factories have sprung up that it was impossible for the Syndicate to bring them all under one management, and the competition which has ensued has been disastrous to the trust. At the same time, dissensions have arisen within the Syndicate, says Kublow's German Trade Review. The struggle, which has lasted since September, 1900, has culminated in a conflict of extermination between the larger factories and the smaller. Prices of cement have fallen so that they are now at least 20 per cent. below the cost of production in the most capably managed works. The result of these conditions is that cement has been exported at abnormally low prices, which is likely to continue until the German manufacturers quit their destructive competition.

MAY IT PROVE SUCCESSFUL.

The Canadian Pacific Railroad Co. is behind a project to make of St. Andrews, N.B., a great summer resort rivalling Bar Harbor. Sir William C. Van Horne, ex-president of the Canadian Pacific, and Sir Thomas Shaughnessy have already spent thousands in building beautiful homes at St. Andrews and in beautifying their grounds. Now it is announced that the company and interests allied to it are about to acquire the Algonquin Hotel and the immense tract of land owned by The St. Andrews Land Improvement Co. The hotel, which will be run during the coming summer under Canadian Pacific management, will receive extensive alterations and improvements, large sums will be spent in laying out and beautifying the land company's ground and preparations will be made for a much larger summer business than heretofore.

It is expected that the Canadian Pacific backing of this beautiful resort, giving promise of permanency, will result in many wealthy Canadians and Americans building summer homes there. There are good boating and bathing facilities, excellent fishing (either deep sea or lake) and many other attractions.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

Progressive Merchants

Know the advantage of getting for their customers the most modern and improved machinery or goods to do their work cheaper and give better and more permanent results.

It is clearly evident that **FIELD WOVEN COILED SPRING FENCE** gives the best satisfaction. and **LONDON FENCE MACHINES** are by long odds the most improved, most rapid and most complete field weaving machines in the world. It is a surprising fact that it costs less to stretch and weave a rod of fence in a field with a London than to do it in the factory, and the fence is also better value by 25 per cent.

London Fence Machines will sell more wire for you and the two are more profitable than ready-woven fencing.

Our line is well advertised and we offer liberal terms and exclusive agency.

The P. R. Cumming Manufacturing Co., LIMITED.

NO. 22.

No. 33 (double blade) is similar in construction and finish.

Something New!

THIS is an entirely new style of mincing knife of our own design. The shank is a flat tinned steel band, drawn tightly into a groove encircling the handle, the blade being riveted between the ends. This construction does away with any hole in the handle, which consequently cannot split or come loose. The handle itself is stained and shellacked, the whole making the neatest and strongest mincing knife ever put on the market.

MADE ONLY BY **The P. R. Cumming Manufacturing Co., Limited, Clarksburg, Ont.**

Wood Screws,	Wire Nails,
Wire Nails, (Papers),	Iron and Steel,
Bright Wire Goods,	Brass and Copper,
Wire Door Pulls,	Hay Baling,
Steel and Brass Jack Chain,	Pulp Binding,
"Crescent" Wire Coat and Hat Hooks.	Galvanized,
	Barbed.

WIRE

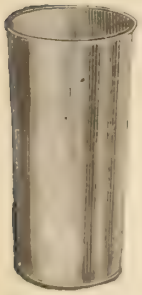
Bed, Blind, and Poultry Netting. — STAPLES — Bright and Galvanized Fence.

BROOM, MATTRESS, BOTTLING, and other wires.

Dominion Wire Manufacturing Co.
MONTREAL Limited TORONTO

Supplies for the Maple Syrup Season.

Sap Buckets . . .



—EXTRA DEEP AND STRAIGHT.
—THREE SIZES.

They possess many advantages over the ordinary flaring Buckets—being small in diameter they do not catch the rain or snow, and as they are very deep, they hang perpendicularly, and consequently will not overflow until full.

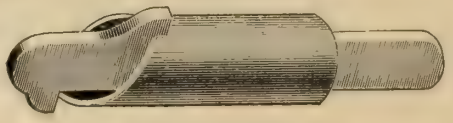
—Covers supplied if required.
—They nest close for shipping or storing.

We can also supply the ordinary Flaring or Western Sap Pails.

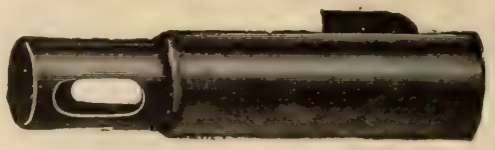
E. T. Sap Spouts.

MADE OF RETINNED STEEL—STRONG AND DURABLE.

Only require a ⅜-in. hole in tree.
It does not cover the inside surface of the hole; therefore a larger amount of sap is obtained.
Packed in card-board boxes.



Maple Leaf Sap Spouts.



Made in Bronzed Steel.
Require a ½-in. hole.
Has a shoulder which prevents it being driven in too far.
The hole in the tree is not exposed to wind and snow; consequently, sap will flow longer.
Packed in card-board boxes.

Syrup Cans, round or square.

Plain or decorated. Made in ¼, ½, and 1 gallon sizes.
Either Wine or Imperial Measure.

A full stock carried in all lines; orders shipped promptly.

KEMP MANUFACTURING COMPANY,
TORONTO, CANADA.

HARDWARE AND METAL

VOL. XV. MONTREAL AND TORONTO, FEBRUARY 7, 1903. NO. 6

COMMENT ON CURRENT TOPICS.

NORTH ONTARIO is represented in the Provincial Legislature by a business man, but neither party appear to have sought a business man to represent it in the contest for the House of Commons. And North Ontario has a number of good business men, too.

* * *

Another rich strike of gold has been made in the Yukon 25 feet below the finest bed rock in the Eldorado, and the pay gravel is running as high as $25 per bucket. Is it possible that the earth's crust in that part of the world is made of gold-paying gravel?

* * *

Venezuela has declared that the claims of the allied powers shall not have precedence over those of her other creditors. This is business-like. Too often the larger creditors in commercial affairs get precedence over the smaller ones. And that is one of the reasons why Canada should have an insolvency law.

* * *

It is becoming more dangerous to travel in railway trains than to go into battle. The relative proportion of hits to misses appears to be getting greater in the former than in the latter.

* * *

Parliament meets March 12. Then comes the tug of war.

* * *

Turkey is usually expensive, whether it be the nation or the bird that bears that name.

* * *

Cold water is being thrown on the movement of the members of the Toronto fire brigade to form a union. The idea evidently prevails that what will quench fires will quench unions.

If the Canadian shirt manufacturers amalgamate we may expect them to present a stiff front.

* * *

The citizens of Toronto are disputing as to whether they shall accept Carnegie's offer of $350,000 for public library purposes. It is safe to premise that if that amount was offered by Mr. Carnegie to any of the negatives not one would hesitate for a moment to accept.

* * *

Now that Mrs. Langtry has demonstrated that she cannot write a play the critics declare that neither can she act. Is it possible that in writing a play she was merely trying a little covert burlesque on the critics which they have not yet been able to appreciate?

* * *

It is said the Boers respect Right Hon. Joseph Chamberlain because he is a strong man. This is sort of returning the compliment, for the British respected the Boers because they were strong men.

* * *

Hon. Samuel Blake deserted the Government party in Ontario and Mr. Gamey the Opposition party, and yet there are a good many people who consider the former the more "gamey" of the two.

* * *

Experts say that the oil fields discovered in Alaska will rival those in Pennsylvania. This is good news. There will be no dearth of oil to throw on the waters in that part of the continent troubled by the boundary dispute.

* * *

People in the United States are beginning to look upon the bombardment of Venezuelan forts as a bombardment of the Monroe doctrine.

It has been suggested in Montreal that Parliament should be called upon to "stop the present persistent stock speculation." Good suggestion. But why stop at stock speculation? Why not embrace all forms of speculation? If people will not be good of their own volition they should be made good by Act of Parliament.

* * *

McGill University is opposed to the wireless telegraph station on Mount Royal. It evidently dislikes wireless conversations going on over its head.

* * *

Viscount Cranborne, Under Secretary of the Foreign Office, says that Great Britain is ready to co-operate with the Powers everywhere. It is more than likely that the Powers are just as willing to co-operate everywhere against Great Britain.

* * *

A Bill has been introduced in the United States Congress stipulating that no individual fortune shall exceed $10,000,000. A bright idea. Ten million dollars is enough to provide the necessities of any man. But the humanitarian effort will not be complete until Congress brings in concurrent legislation to limit the brain power of great minds. If a limit is to be put on wealth, it will be certainly necessary to put it on brains as well.

* * *

The stock market is hardening; and thus speculators will have an easier time making money.

* * *

It is said that hungry office seekers are making the life of Premier Laurier a burden. As there never was and never will be enough offices to go around there always will necessarily be hungry office seekers. It would be a fortunate thing

for the Government as well as the State if a few score of them were to die of hunger.

* * *

President Roosevelt injured his hand cutting down trees and King Edward has caught a cold planting trees. Rulers evidently get hurt whether they are trying to cut down or to build up trees.

* * *

If the price of coal goes much higher, the indignation of consumers will be hot enough to heat the average home.

* * *

Carnegie seems to be afraid of dying rich. This is unique. Most of us are troubled with the fear of dying poor.

* * *

It is estimated that it will cost about $100,000,000 to get rid of landlords in Ireland under the Dunraven Conference scheme. If it brought contentment to Ireland and peace to the British Government it would be a bargain-day figure.

* * *

The committee which has been formed in Great Britain, under the presidency of the Duke of Sutherland, to inquire into the question of Great Britain's food supply should remember that one way to assist in solving the problem is to help build up the Canadian Northwest.

* * *

The bear did not see his shadow on Monday, and, of course, we shall have an early spring. There is no doubt about this. Tradition, like figures, cannot lie.

* * *

Sir Albert Rollit, in his report to the London Chamber of Commerce on his recent visit to Canada, said the deputation had gained a most favorable impression of Canada's possibilities. Sir Albert's experience is that of most people who, like him, come to Canada with their eyes open.

A SCIENTIFIC TOASTING FORK.

An ingenious toasting fork, manufactured by The Fairgrieve Manufacturing Co., Toronto, is being offered to the trade. It is known as the Fairgrieve Patent Gas Toaster, and as it is constructed without solder, it is guaranteed to toast over the flame on gas, gasoline or blue-flame oil stove, without receiving taste or odor from the flame, which cannot pass through the perforated tin, yet the heat passes through freely, thus producing a toast which, while light and crisp, does not dry up or bake the centre of the bread. This toaster retails at 25c., with a good margin of profit. Further information will be forwarded to any hardwaremen by The Fairgrieve Manufacturing Co., Toronto.

LEAD MANUFACTURE IN CANADA.

By Robert Monro Ex-President Canadian Manufacturers' Association.

THE Editor of HARDWARE AND METAL asks me to supplement a recent editorial on lead manufacture, which has become a somewhat prominent subject for discussion on account of the repeated delegations that have been visiting us from British Columbia.

I dare say most of my readers understand that by an Order-in-Council passed three years ago, pig lead smelted in British Columbia can be refined in the United States and returned into Canada, duty being paid only on cost of refining. In addition to this provision, there is a small refinery at Trail which turns out some pig lead.

The pig lead so refined is a fit article for the manufacture of lead pipe, lead shot, lead solder, babbit and many other purposes, and, in fact, is being regularly used in all our domestic factories who handle these products. This gives the Columbians a market for about 5,000 tons.

There is in addition about 7,000 tons of lead used in Canada in the form of White lead, red, orange, litharge, etc. This is used for a variety of porposes, the largest proportion being used in paint ; smaller quantities are used in pottery, varnish and oil dryers, in rubber and other industries.

The aim of the Columbians is to have those 7,000 tons made from their ore, and in order to do this they ask the Government to put such a duty on the white lead, red, orange, Litharage, etc., as would secure their being made from their lead instead of being imported as at present.

In addition to this they want an increase of duty on the pig lead itself. Under the present tariff the duty is 15 per cent., and an increased duty will, of course, affect the products now being made from Canadian lead as well as those just named.

There appears to be a difference of view in British Columbia as to what the protection for pig lead should be ; ¾ and 1c. per lb. have been suggested, and the last delegation submitted 2⅛c. as a duty on pig and 2⅞c. on white lead, these being the figures applicable in the United States. The paint manufacturers are naturally uneasy in regard to the matter, because at present dry white lead is imported at 5 per cent. duty, whereas 2⅞c. per lb. would mean 75 to 80 per cent. duty, and if there is to be so high a duty placed on the paint manufacturers raw material, the duty on English and other imported paint would require to be about 100 per cent. It is not at all likely that the Government will give effect to such figures now.

My view is that even at the risk of raising the price of paint, the Government might go a good way to assist the lead miners, provided a moderate percentage will serve the purpose. I believe some of the delegates have stated that anything less than the high rates named will not serve the purpose. If that is admitted it means that nothing can be done, but if, for example, ¾c. per lb. would be satisfactory to the miners, either in the way of bounty or Customs duty, there may be some hope of success for them.

The paint makers certainly would prefer to have matters remain as they are. Their protection is low, but they don't worry much about it, because there is so much competition among themselves.

They feel naturally adverse to any great addition being made to the cost of their raw materials, because an important advance in the cost of paints would naturally exert some check on consumption.

The patriotic desire to keep Canadian money in Canada and help forward our domestic industries is the one consideration that prevents the paint makers from offering strong opposition to a movement which they look upon with no little anxiety.

PERFECTION LAWN SPRINKLER.

Among the new goods which The James Morrison Brass Manufacturing Co., Limited, Toronto, are Introducing this year, is a lawn sprinkler, the "Perfection," which they claim can be adjusted to throw the finest spray of any sprinkler made, which will make it particularly valuable for sprinkling flower beds, as it will not destroy the blossoms. The spray will cover at full pressure from 15 to 20 feet, and will reach about 8 feet high. The sprinkler is made on stand or with spike. It is all iron except the spray head, which is of brass.

CATALOGUES, BOOKLETS, ETC.

BICYCLE ACCESSORIES.

IT would be asking too much to expect a greater range of bicycle accessories than are presented in the neat, compact catalogue of these lines issued by The Canada Cycle and Motor Co., Limited, Toronto Junction. The lines included are saddles, handlebars, pedals, spokes, grips, tool bags, chains, bicycle pumps, lamps and bells, tires, rims, cements, enamels and repair shop supplies. In addition to the many lines made by the firm there is also full attention paid to the many lines made by outside firms whose goods have obtained a world-wide name. No bicycle dealer can afford to be without this catalogue, which will be sent upon application to readers of HARDWARE AND METAL.

DROP FORGINGS.

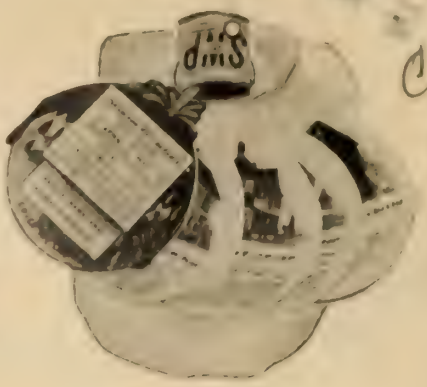
The 1903 catalogue of J. H. Williams & Co., manufacturers of iron, steel, copper, bronze and aluminum drop forgings, Brooklyn, N.Y., is now ready for distribution. The lines included are wrenches of all kinds, spanners, tool post fittings, wedges and rings, crank handles, lathe dogs, caliper guages, "Vulcan" hooks, rope sockets, eye bolts, crank shafts, rod and yoke ends, valve stem forgings, levers, parts for automobile steering gear, chain pipe wrenches, tack claws; also special drop forgings, made to order. This firm has such a reputation that the leading manufacturers who use these lines keep in close touch with them. A copy of their catalogue, which, by the way, is a creditable production from the artistic as well as the mechanical point of view, will be sent to any dealer or manufacturer who mentions this paper.

VANCOUVER HARDWARE CONTRACT

McLennan, McFeely & Co., Vancouver, have received the contract for supplying that city with hardware, the tender aggregating about $1,000. The Vancouver Hardware Co. put in a tender, and had it not been for an omission to explain that the usual customer's discount appertained in connection with their tender, The Vancouver Hardware Co. would have been the lowest tenderer. A letter explaining that this condition applied to their tender was received yesterday, but as the letter was received after the tenders were opened by the finance committee, it was not considered.

M. N. Stevens, of M. N. Stevens & Sons, general merchants and millers, Glen-Cairn, Ont., is dead.

Sells Paint for You



The Calendar Circular, which we mail to lists of property holders furnished by our Agents, is the most forceful paint seller ever used by any house. It is an advertisement for your whole store.

It sells paint.

It is, however, only one of the many advertising helps we give those who handle

THE SHERWIN-WILLIAMS PAINTS

CEMENT TRADE NEWS AND COMMENTS.

THERE is to be a large expansion of the demand for cement for building purposes in Canada, as its good points are recognized. Among the advantages claimed for it is its fireproof quality. In an article in Cement, New York, Professor Newberry is quoted as follows: "Portland cement is practically infusible, and the water which it combines in hardening is given off very slowly under the action of heat. The surprising feature of its behavior when strongly heated is that it does not crumble, crack, warp or scale off, as most other materials do. Even after long calcination at high temperatures it still shows considerable cohesion and adhesion to metal, resists the impact of powerful streams of water, and does not crack under sudden cooling. On moistening with water after ignition it again hardens."

The same article publishes several views of buildings after severe fires, showing the slight damage done to cement floors and walls as compared with floors and walls of tile and terra cotta in several kinds of buildings. The article comprises a strong argument for the use of cement in building, particularly in the construction of factories.

It would be to the advantage of hardwaremen to encourage the use of cement for building purposes, and to establish a strong connection for its supply to local builders.

* * *

The Prescott, Ont., Town Council decided on Monday night to build about as much more granolithic walks this year as were completed last season. It was not decided whether they would be done by day labor or contract.

* * *

T. Beasley, city clerk of Hamilton, Ont., is asking for tenders for the supply of Portland cement for that city. Tenders must be in by February 17, noon.

ST. JOHN HARDWAREMEN DINE.

THERE is no lack of originality in the executive of the St. John, N.B., Board of Trade Hardware Association. A feature of their annual dinner has been for some time a souvenir menu, always of distinctive character. The menu this year, a copy of which has been received by "Hardware and Metal," is exceptionally clever and unique. It is a representation of a two foot rule, made in four divisions, of strong cardboard, of an orange tint. On the inner folds of the menu, toast list and list of officers and committees are given.

It will be seen from the following menu that the members of this Association, while both artistic in spirit and progressive in business matters, know how to appreciate the "good things" of life:

Oysters on the Shell

Consommé — Mock Turtle

Boiled Chicken Halibut, Egg Sauce

Creamed Sweetbreads,
With Mushrooms and Truffles, Sherry Sauce
Plain Lobster on Shell, French Dressing
Roast Beef, Roast Turkey
Boiled Ham

Potatoes — Spinach — Green Peas

Quail on Toast

English Plum Pudding, Brandy Sauce
Wine Jelly, Pineapple Jelly, Strawberry Jelly, Charlotte Russe
Frozen Fruit Pudding
Celery — Cheese Balls

Coffee

Nuts — Raisins. — Fruit.

Confectionery

"The King," the first toast, was responded to with musical honors and due enthusiasm.

"Our Association," was the theme of the president, W. H. Thorne, who reviewed the nine years' history of the organization, from the time he had the pleasure of giving the first dinner to the members, until the present, when the Association was one of power and influence, contributing much to the general welfare of the trade.

"Our Sister Associations," was proposed by the vice-president, John Keefe, and responded to by R. B. Emerson, Thos. McAvity and J. J. Foot.

Ex-President W. S. Fisher then proposed "The City of St. John," paying some high compliments to the services rendered by members of the Board of Trade and the city council. In responding, Mayor White referred to the assessment problem and harbor facilities as the vital questions affecting the business life of the city, suggesting a commission of experts to deal with the first matter and a harbor trust to deal with the latter. President W. M. Jarvis of the Board of Trade, referred to the steady industrial growth of St. John, and to the Mayor's harbor trust scheme, which he fully endorsed.

"The Iron and Hardware Manufacturers" was proposed by M. E. Agar and responded to by E. Perkins, the humorist; W. S. Fisher, who advocated technical education for boys in the school; James Pender, who desired a rearrangement of the tariff; C. Macdonald, John McAvity and John Keefe.

"Our Guests" was proposed by Vice President Keefe, and responded to by Messrs. McGill, of Montreal, and Allan Dobbee, of Woodstock, N.B.

In every respect the dinner was a success for which credit is due, in a large degree to the dinner committee, President A. M. Rowan, J. A. McAvity, J. P. Macintyre and Secretary J. J. Barry.

IN THE CASE NOW PENDING

wherein Hardware and Paint Dealers everywhere are the judges, the people of Canada and other countries the jury, and **CHURCH'S COLD WATER**

ALABASTINE

for twenty-five or more years on trial, it is very evident that **ALABASTINE** is the only wall-coating in demand. The judge in charging the jury—stocking **ALABASTINE**—and the jury in rendering the verdict—buying and using **ALABASTINE** have shown conclusively that the claims of the **ALABASTINE COMPANY** have been clearly and emphatically established. The evidence submitted is in order as follows:

SUPERIORITY—To sell goods of any other manufacture, the dealer **must** recommend them "the same thing, or, as good as ALABASTINE."

DURABILITY—ALABASTINE is manufactured from a cement base; can be recoated, and hardens with age, a claim that no other manufacturer has substantiated.

ARTISTIC BEAUTY—Made in twenty beautiful tints and white. Any degree of decorating can be done with ALABASTINE from plain tinting to the most elaborate in relief decorating known to the decorator's art,

IS SANITARY—Sanitarians condemn in strong terms the use of wall paper for the walls of living rooms, on account of the poison used in its manufacture, and the decaying mouldy paste on the back of it. Kalsomines that rub off on everything that comes in contact with them are not to be recommended. Physicians all agree that "walls to be healthy must breathe." ALABASTINE is porous and permits the free passage of air.

IS CONVENIENT—Being ready to use by mixing in **cold water**. The inventor of this process, Mr. M. B. Church, was the first to produce a wall-coating to be mixed with cold water that was practical. This feature is patented in Canada and other countries. ALABASTINE in this form has absolutely displaced hot-water preparations, and forced kalsomine manufacturers, at the risk of patent infringement, to attempt to imitate this process.

In accordance with above verdict and the facts stated, this court hereby affixes the great seal of the manufacturers of the greatest wall-coating to be found anywhere in the world.

The trade supplied by Wholesale Hardware and Paint Dealers. Also by

THE ALABASTINE CO., Limited, PARIS, ONT.

MACHINERY

RAILWAY AUTOMOBILES IN EUROPE.

RAILWAY automobiles seem likely to be an assured fact in France and England, according to The London Times. On June 18 next, at 8.50 a.m., there will start from the Lyons Station, in Paris, a train composed of three "autonomobile" carriages—that is to say, carriages that are both autonomous and motor cars which will enter the Dijon Station at noon. The 315 kilometers (195 miles) between Paris and Dijon, will thus have been covered in three hours and 10 minutes, or a normal speed of 100 kilometers (62 miles) per hour; and the same speed may be maintained between Dijon and Lyons, Lyons and Marseilles, Marseilles and Nice, and Calais and Paris uninterruptedly, so that the distance between Calais and Nice can be covered in 14 hours.

This invention is now neither a project nor an experiment, but exists and works, and its application is merely postponed for some months for the construction of the actual rolling stock. To form an accurate idea of the attention which this new mode of traction and locomotion calls for it will be sufficient to say that the eminent firm of Gardner & Serpollet undertake the construction and organization of the autonomobile carriages.

It is interesting to note the transformation which, with the progressive developments in proportion to the construction of the carriages and the resources of the companies, the conveyance of passengers will undergo. First of all, as its name indicates, the autonomobile supercedes the locomotive—that is, it dispenses in every train, short or long, slow or fast, with a weight of 140 tons. It saves the considerable cost of locomotives. It abolishes smoke, steam, noise, vibration, the jolt incidental to stopping and starting, and the necessity of stopping to take up water. It also abolishes all the men in charge of a locomotive except the engine driver. The new carriage is 17 meters (56 feet) long—that is to say, the length of the present corridor carriage. Of these 17 meters, a space of 2.6 meters (8.5 feet) in front is occupied by the traction apparatus, while the remaining 14.4 meters (47.5 feet) will comfortably accommodate 40 passengers and the 1,200 kilograms (2,645 lb) of luggage allowed them. The cost of the autonomobile is the same as that of the first-class corridor carriage, while the weight, including the traction apparatus, is also the same. Thus the abolition of the locomotive is an accomplished fact, and the rails which now have to bear the weight of the locomotive and tender, as well as of the carriages, are relieved therefrom.

The system is one which, in an embryo form and dating back several years, has been applied to short and fast tramway lines, but never to practically unlimited distances. While not, perhaps, using the technical expressions which would be employed by a specialist, I believe I am not mistaken in stating that by means of the slightest possible quantity of petroleum the smallest possible quantity of water can be converted into the greatest propelling power of steam which can be produced. The extremely powerful vapor thus obtained acts directly on the wheels of the autonomobile. Of course, the petroleum is consumed, but the water, first transformed into vapor, condenses afresh, reverts to its original condition, and is then more easily transformed into steam, because it retains its heat. Thus, though the petroleum has disappeared, the water remains, which in temperate climates, is of no inconvenience and in dry countries is of priceless value. Consequently, in front of every autonomobile is an apparatus producing with a liter of petroleum per kilometer (1.05 qts. per 0.62 mile) the steampower requisite for propelling the carriage with its 40 passengers and 1,200 kilograms of luggage at a normal and almost minimum speed of 100 kilometers (62 miles) an hour, and that, too, without interruption, noise or jerk. In order to overcome the air resistance with such a speed entails, the autonomobile in front and behind is so shaped as to cut the air, which thus becomes an auxiliary rather than an obstacle. As each autonomobile has its own apparatus, the carriages, of course, might go singly as easily as when coupled together. I may add that the weight of the apparatus, apart from the petroleum and water carried, is trivial. As to the latter, to go from Paris to Nice, 1,100 or 1,200 kilograms, (290.5 or 317 gallons) of petroleum and 4,000 or 5,000 kilograms (1,056 or 1,321 gallons) of water will be required. This will allow of the whole journey being made without a stop; only care must be taken to guard against overheating.

The Northeastern Railway of England is building at its York works two auto cars to run on its railway, each of which will carry a complete apparatus for generating its own motive power. At one end of the car there will be a Napier petrol engine of 85 brake horse-power, with four cylinders. This engine will drive a dynamo, generating electricity for two motors, which will apply the power to the wheels of the "bogie," underneath the engine compartment. Two of these four-wheeled "bogies," of practically the normal railway-carriage type, will carry the framework of the car, but the body will be much lighter than that of an ordinary carriage, approaching closely to the tram type. In fact, the vehicle will be a tram-salon, with an engine compartment at one end, and a conductor's compartment at the other. Seating accomodation will be provided in each car for 52 passengers; and, as storage is provided for 30 gallons of petrol, it is expected that the autonomobile will be able to work five hours at a stretch without replenishing. It is calculated that by this system a speed of 30 miles an hour can be got up in as many seconds, which is a very much quicker acceleration than is possible with an ordinary train. It is not proposed to use these auto-cars at first for the longer-distance traffic of the Northeastern Railway, but to employ them rather for accelerating the service on those sections of the system where an ordinary train can only make a slow rate of speed, owing to the number of stopping places.

MACHINERY AND ELECTRICAL NOTES.

H. B. McGIVERN, of Ottawa, has applied for a charter to run a railway between Toronto and Hamilton, Ont.

Prescott, Ont., will purchase an up-to-date hose-wagon fitted with Stempel fire extinguisher.

W. T. Farrell is building a new sawmill near Vancouver, and will be installing machinery shortly.

Sherbrooke, Que., is taking steps to acquire the gas plant owned by The Sherbrooke Gas and Water Co.

A 36-in. pedestal bandsaw was shipped to Kennedy-Davis Milling Co., Lindsay, Ont., by H. W. Petrie, Toronto.

The trouble between The Kingston Locomotive Works and the machinists brought from Germany by that concern, has not yet been settled.

The Mississauga Lumber Co., Hamilton, Ont., are building a sawmill, to employ 100 hands, near the mouth of the Algoma River, Ont.

S. W. Bradley, Cornwall, Ont., has purchased from H. W. Petrie, Toronto, a fine 24-in. x 10 ft. screw cutting engine lathe, "Crossby" make; also a 20-in. shaper.

A No. 4 "Jewel" automatic engine, capable of developing 18 h.-p. was installed in the factory of Arthur Home, Toronto. This engine was furnished by H. W. Petrie, Toronto.

The city corporation of Quebec intends to again ask the Legislature to empower it to impose a special annual tax of 25c. upon each telegraph, telephone or electric light pole in the city streets.

The Schultz Bros. Co., Brantford, Ont., are materially enlarging their machine shops in order to increase their output, as they intend to make an attempt to capture a share of the South-African trade in their lines.

Benj. Watkins, foreman of the M.C.R. shops, at St. Thomas, Ont., has accepted a lucrative position as manager of an automobile manufactory in New York City, and will shortly leave the city to assume his new duties.

The Page-Hersey Iron and Tube Company, of Guelph, Ont., have purchased an engine lathe with 30 in. swing and 14 ft. bed; also a "Buffalo" blower and portable forge. The above machine was installed by H. W. Petrie, Toronto.

The Manufacturers' Association have asked the Ontario Government to extend the period of exemption from taxation, except for school purposes, of machinery used in manufacturing expires at the end of this year, and asked that legislation be adopted at the next session, extending the period until such time as the present system of taxation in the Province is revised.

The Webster Gasoline Engine Co., Hamilton, Ont., last week shipped via New York, to H. Carpenter, Sydney, Australia, to be placed in a private launch. The heavy duties prevent many from being sent across the border, while Australia admits them free. The engine weighs about 500 lb., and is constructed of cast steel, brass and Tobin bronze, the latter being of a much harder composition, a necessity for use in salt water.

A. Angstrom, recently manager of The Bertram Engine Works and Shipbuilding Company, Toronto, has resigned, to take the general management of the new Canadian shipbuilding company in which F. Nicholls, W. R. Brock, Senator Cox, Wm. Mackenzie and W. D. Matthews are interested. The company are preparing plans, securing sites and in other ways preparing to start active operations on the erection of their works on the Upper Lakes in the early spring.

WILL MAKE AUTOMOBILES.

The Central Canada Foundry and Machine Works, of Carleton Place, Ont., which has been part of the James Gillies estate, is about to be transferred to a joint-stock company. It is learned that there will be a large amount of money spent in erecting new buildings and installing new machinery during the coming season. This, no doubt, will mean a boom for Carleton Place, as the greatest demand for gasoline engines, especially for farmers' use, will warrant the company to go into the manufacturing of them on a very large scale. They will continue the manufacturing of the Gillies launches, and it is also learned that they will manufacture automobiles and will continue to a general foundry and machine business.

RECOVERY OF TIN FROM SCRAP.

According to Dr. Mennicke, Germany possesses seven works by which tin is removed from scrap by an electrolytic process. About 30,000 tons of scrap were dealt with by the electrolytic processes. Germany herself is unable to provide the enormous amount of scrap required, and the supplies of raw material for these works are largely drawn from England, France and Switzerland. The average percentage of tin contained in the scrap is only about 3.0 per cent., but 88 per cent. of this can be economically recovered by the electrolytic methods in use, and both the tin, which is obtained as a spongy deposit at the cathodes of the cells, and the iron, after metallurgical treatment, are sold without difficulty to metal merchants. The author discussed at some length the advantages and disadvantages of various electrolytes which have been used for stripping the tin from the scrap by electrolytic action, and recommends the use of a simple alkaline solution of sodium hydrate. This yields a solution of sodium stannate comparatively free from other impurities. The tin can be electrolytically deposited from this solution in the spongy state without risk of contamination by iron. The addition of sodium chloride to the alkline solution, in order to increase its solvent action, is not approved of by the author, since this addition largely increases the amount of impurity present in the electrolyte.

OPPOSED TO MUNICIPAL CONTROL

IN making an argument against the proposition that Winnipeg should acquire and operate a gas plant, Wilford Phillips, superintendent of The Winnipeg Electric Street Railway Co., said:

"If the proposed city plant was not more successful than the city street lighting plant, it would be a doubtful investment. This plant, it was claimed at the time, would not cost more than $40,000, if the city got the use of the company's poles, which was agreed to, and yet the cost had gone to the large figure of over $65,000. It was now found that the street lights cost the city more for operation than the price tendered for by the company, namely, 29c. per light for new lights and 25c. for the company's lights then in use, the cost to the city being found by the city engineer and electrician, on investigation, to be considerably over 30c. per light per night.

"In calculating the cost there was omitted a large part of the fuel used and practically nothing was charged for depreciation, which, in an electrical plant, usually amounts to from 12 to 15 per cent., and nothing was charged for the building, while the plant and machinery, as shown by the official reports of the city electrician, are far from being in the highest state of repair.

"As to gas, Mr. Phillips said the company's prices are $1.85 for lighting gas and $1.60 for fuel gas per 1,000 net. The price of oil, coal, labor and working expenses are increasing, as everybody knows, and the street railway company is having all it can do to make expenses from its gas business, and when the electrical power at Winnipeg River is developed and prices of electric lighting reduced in Winnipeg, which will be the case very shortly, the future of gas lighting will be very uncertain.

"The future of gas in Winnipeg depends altogether on the development of the electric works now under construction, and cheap electricity would make the city uncomfortable with a gas plant on its hands, while the street railway, who now operate the gas plant, will have to seriously consider the whole question in view of electrical competition."

THE UNEXPECTED TEST.

EVERY progressive business man, no matter how far-sighted he may be, finds himself at one time or another in danger of being the victim of conditions that were as unexpected as they are unfavorable. Then comes the test. He may not realize his danger until too late, when the inevitable happens, and he is fortunate if he can effect a compromise with his creditors. Or, perchance, he may see the trend of circumstances in time, and, by putting his back to the wall and going into the matter with determination and redoubled efforts, he may come through the crisis. When he wins such a fight he is bound to be stronger in his own confidence and in the eyes of the business world than before the test.

An instance of this nature is related by an exchange of the experience of a small tradesman who had invested all of his available means in one big contract. After his working capital was locked up in the contemplated contract, unexpected litigation made it impossible to secure collection on it, and before long difficulties began to present themselves. Bills were earnestly pressed for payment. There was no remedy unless he could secure more money than was coming in the regular channels. He decided to do some extra work; made it a rule to collect his accounts more closely than he had ever done before. He was soon able to make small payments to all of his creditors, as an evidence of good faith and to secure further credit. He was untiring in his efforts to procure such new work as he could make the most money out of, by the use of his own practical knowledge and the skill of his employes, and by doing it promptly. This extra exertion continued until finally collection was made on the big contract, which placed him on a stronger financial basis than he had ever been in his life. Moreover, he had learned the advantage of prompt collections, of completing the work promptly, and of employing the most skilled labor he can secure. As a result he now has around him the best class of workmen, who receive the best pay; the establishment has the choicest class of patronage from people who can afford to pay their bills, which are not allowed to wait long for collection.

While it is not likely the test will come to every business man in the same way it will come to many in one way or another. The man who stands such a test is the man who will eventually win.

THE BENNER PROPHESIES.

CONSIDERABLE attention has of late been directed to the "Benner Prophesies," which have been referred to more than once in these columns. It will be remembered by older business men that the author of these prophesies, an Ohio farmer named Benner, after a comprehensive study of the prices of several staple articles during a long term of years, claimed to have discovered that, during that period, prices had moved up and down in cycles.

The truest barometer of trade, he argued, was pig iron, in which the period between high prices ran along successively for eight, nine and ten years. The intervening years, during which prices were declining and then advancing, were divided, according to the above order, into six years down and two up, five years down and four up, seven years down and three up.

The belief in the soundness of the Benner arguments has been strengthened greatly by the fact that, since 1875, trade has responded closely to the theory of price cycles advanced by Benner.

According to this theory the last apex of high prices was reached in 1899 and now we are in a nine-year period, of which the lowest point should be touched next year, after which prices should move upwards for four years.

This theory, it should be pointed out, is based on conditions in the United States, and while Canada follows rise and fall in that market rather closely, the greater solidity of our financial and commercial institutions has prevented this country from feeling the years of depression as they have been felt in the United States. Moreover, in view of the remarkable development of the Canadian Northwest the "low point" likely to be reached next year is not likely to seriously interfere with business conditions, in Canada at least, unless something unforseen and unusual happens.

PIG IRON PRODUCTION.

THE threatened shut-down of Ontario smelters on account of the scarcity of coke came to pass on Saturday last, when the Hamilton smelter stopped operations, probably for several weeks. This, coming at a time when the Canadian smelters have orders booked month in advance, is inopportune, to say the least.

The cause of the scarcity of coke is not due to any decrease in the production of that article, but to the congestion of traffic in the Pittsburg region. The matter is tersely expressed in Dun's Review as follows:

> Miles of loaded cars and thousands of tons of coke piled in the yards at Connellsville tell the story of conditions in the iron and steel industry. Furnaces are closing because of the fuel shortage, which at many points is now more acute than at any previous time. By giving coal, live stock and perishable goods precedence over all other freight, the railroads helped consumers everywhere, but at the expense of the leading manufacturing industry. Not only is it impossible to move coke freely to blast furnaces but equally difficult to get pig iron to the mills, and finished steel products to consumers.

In the face of the difficulties of production on this side of the water it is gratifying to note that Scotch pig iron, in view of the scarcity of Canadian iron, is offered in liberal quantities at about the same [illegible] as the home product, and that Canadian foundrymen and machine shops have bought over thirty thousand tons of this pig iron during the past few months.

TORONTO UNIVERSITY AND ITS DEFECTS.

ON another page we print a letter from Mr. James Loudon, president of the Toronto University, in reply to an article which appeared in THE CANADIAN GROCER, of January 23, criticising the University and its methods. For President Loudon we have the highest respect. As executive head of the University he stands high in the public estimation, and we regret exceedingly that in criticising the institution, of which he is the honored head, he should seem to share in it.

For the particular defects in the University which we dealt with, it was not intended to throw any blame upon Mr. Loudon. He, no doubt, does his best. And probably does as well as any other man could do under the circumstances.

The fault has not been with President Loudon, but with the system under which he is compelled to labor—a system which is probably as objectionable to him as to many other well-wishers of the University.

It is quite true that, through the inadvertence of a member of the staff who drew up the names, a partial mistake was made in the list given of gentlemen who compose the governing bodies of the McGill and Toronto Universities. But, while this is true, it does not affect the force of our argument.

We maintain that the Senate of the University, while embracing some men eminent in their respective professions, is not composed of the proper material to govern that institution as far as its educational facilities are concerned.

Being professional men, they have, by implication, at least, laid down the principle that the University was designed for training men for the professions only. At any rate, what else can be inferred from the curriculum? Like begets like. This President Loudon will not dispute. And, if like begets like, how can it be expected that a governing body composed of professional men can bring forth a curriculum designed for any other than the manufacture of professional men?

Not for one moment would we maintain that the end-all of a University training should be to fit men for making money The chief end of a University should be to make men. Men in the highest sense of the term. Men who are qualified for the practical affairs of life: in other words to perform well their part as citizens. And that does not mean as members of the learned professions alone. It means practical and intelligent men in the world of commerce and agriculture—men who are of practical use in developing the great natural resources of the country. This the Toronto University is not doing. It has turned out some good men; in fact some exceptionally good men. But even the educational institution of "Mr. Squeers" turned out some good youths.

But the impractical character of the Senate is seen not only in the curriculum but is reflected even further back. We have reference to the professors occupying some important chairs. If, as Preisdent Loudon thinks, the Senate is entirely fitted for their position it might be well to account for the appointment of some of the professors who are making serious failures of their chairs. That these failures exist even President Loudon himself cannot deny

Mr. Loudon points out that upon the Board of Trustees are the names of such business men as Messrs. B. E. Walker, J. Herbert Mason, G. S. Gzowski and the late Senator Wood. True, but these men have nothing to do with the curriculum. And Mr. Loudon weakens rather than strengthens his case by pointing this out.

In his concluding paragraph but one, Mr. Loudon, after giving a list of the positions occupied by graduates of the University, says: "The above * * * ought to be sufficient to indicate that you are mistaken in your impression that Toronto is not doing her full share in advancing the development of industry."

We presume he means by "Toronto" the University. We are sorry we cannot agree with him that the evidence he offers is sufficient to prove his case. We have already said that the University has turned out some exceptionally good men. But a comparative few out of many thousands no more proves the efficiency of an educational institution like that of Toronto University than that one swallow makes a summer. A robin was seen in the Queen's Park the other day, but we have not yet had a glimpse of spring. It is only a dead tree that does not bear some fruit.

THE BICYCLE AS A HARDWARE LINE.

A FEW years ago the natural outlet for the sale of the bicycle was through the hardware store. Owing, however, to the large number of bicycle manufacturers and jobbers who had travellers drumming the country and placing samples with all classes of men, and, in fact, making anybody an agent for the sake of getting in one wheel, the hardware dealers gradually became disgusted with the business. In addition to this many trashy bicycles were on the market, which gave the dealers a great deal of trouble in connection with repairs. This has all changed of late years; the few bicycles of reputation now on the market require very little attention from the dealer, both for the reason that imperfections have been pretty well overcome, and also that the riding public understands the bicycle better. The margin of profit is good, and being a natural hardware line dealers could in many cases add a bicycle department to their business with decided advantage.

Another fact to be considered is that the bicycle enjoyed the boom greater than that of any merchantable product of modern times, with the result that it grew into a craze, and the consequent reaction always incidental to a boom of this kind in any sort of business brought a depression in the bicycle trade, giving many people the idea that the bicycle business was dead.

The results of British companies during the past season show that bicycle trade is again in a prosperous condition there, and we learn that the surplus stock accumulated by over-production in the United States for the past few years has been pretty well disposed of during the past season. The same we learn is true of Canada, with the result that bicycles offered for 1903 will be for the most part bright new models. A decidedly healthy revival is apparent in the business, and the addition of the line is well worth the consideration of the hardware trade.

A REPLY FROM PRESIDENT LOUDON.

Dear Sir.—In your issue of January 23, in an article entitled "Business Men in University Affairs," you indulged in some rather severe criticism on the University of Toronto, animadverting more particularly upon its administration and on the alleged want of success of its graduates. In this latter respect you contrasted the University, much to its disadvantage, with McGill University, instancing particularly the demand for engineering students of McGill in implied contrast with Toronto.

Now, permit me to say that the authorities of the University do not object to criticism which is based on knowledge and fact; but in this particular instance the force of your main argument is so obviously based on a misconception that any inferences which your readers might draw therefrom would be entirely vitiated; while, on the other hand, your contrast concerning the demand for engineering students is so totally at variance with fact that it would prove equally misleading. I can hardly suppose that it was your intention to mislead your readers in either of these respects, and I am sure you will gladly allow me the opportunity of setting the matter in its true light.

First, as regards the administration. You invite your readers to compare the governing bodies of the two institutions as printed in parallel columns, and you find in the comparison the "direct explanation" of what you term "disappointing results." A little more knowledge, on your part, of the organization of the two universities or the ordinary precaution of informing yourself, would have at once made you aware that your comparison is absurd. In your first column are printed the names of the gentlemen who constitute the board of governors of McGill University; in your second column, the names of the Senate of the University of Toronto. In other words, you have practically been comparing the financial board of McGill with the academic board of Toronto. The Government of Ontario and our board of trustees conjointly discharge duties similar to those of the board of governors of McGill, and here your comparison might properly have lain. On our board of trustees are such men as John Hoskin, K.C., B. E. Walker, J. Herbert Mason, C. S. Gzowski and the late Senator Wood—men, whose business capacity you will not, I am sure, question. I may point out that our Senate, having to do with curricula and examinations, is necessarily and properly largely academic in its personnel, as is the corresponding body in McGill and other universities.

Secondly, as regards the implied difficulty of our engineering graduates in obtaining employment: I am informed by Principal Galbraith, of the School of Practical Science, that the demands for graduates of the school since the opening of the session in October have been so numerous, that he has found it impossible to satisfy them. At present there are 341 graduates, who, almost without exception, are employed in work for which they were trained in the school. The prosperity of the school has been increasing year by year, the number of students at present being 349, the largest, by far, in the Dominion. The ultimate reason for its steady growth must be found in the success of its graduates. The principal occupations in which they are engaged, are the steel and iron industries, transportation, mining, electrical and power development, municipal work, drainage, etc. Canada gives employment to 73 per cent. of the graduates, the remainder being scattered over the United States, Mexico, West Indies, England, South Africa, India, etc. Among the positions occupied by them are the following:

Chief Engineer Vancouver, Victoria and Eastern Railway, Vancouver.

Chief Engineer Dominion Iron and Steel Company, Sydney.

Chief Engineer Drainage Commission, New Orleans.

Assistant Chief Engineer P. & L. E. E. Railway, Pittsburg.

Chief Engineer Lake Erie and Detroit River Railway, Walkerton, Ont.

Consulting Engineer Structural Steel Works, New York.

Manager Sullivan Machinery Company, New York.

Consulting Electrical and Mechanical Engineer, Montreal.

Engineer Ontario Power Company, Niagara Falls, Ont.

Consulting Engineer, Foundations, Bridges, New York.

Division Engineer Trent Valley Canal, Peterboro'.

Engineer Chambly Electric Works, Chambly.

Manager Toronto and Hamilton Electric Company, Hamilton.

Assistant Electrical Engineer Bell Telephone Company, Montreal.

Consulting Engineer National Boiler and General Insurance Company, Manchester, England.

Mechanical Engineer Consolidated Gold Fields of South Africa, Johannesburg.

Manager Simcoe Canning Company, Simcoe, Ont.

Manager Mikado Gold Mining Company, Rat Portage.

Chief Chemist and Assistant Manager Alameda Sugar Company, Alvarado, Cal.

Superintendent Playfair Lumber Company, Midland.

Manager Goldie and McCulloch Engine Works, Galt.

Chief Chemist Nova Scotia Steel Company, Ferrona, N.S.

Assistant Engineer Gas, Light and Coke Company, Cleveland.

Chemist National Tube Department United States Steel Corporation, McKeesport, Pa.

Chief Engineer Gurney Foundry Company, Toronto.

Secretary Ontario Bureau of Mines, Toronto.

Professor of Physics, Muir Central College, India.

Engineer Main Officers Slate Quarry Company, North Wales.

Mining Engineer Los Reys Gold Mining and Milling Company, Mexico.

Manager Batavia Electric Light Company, Java.

Manager London Electric Construction Company, London.

Chief Chemist Crow's Nest Pass Coal Company, Fernie, B.C.

Assistant Superintendent Canadian Electro Chemical Company, Sault Ste. Marie, Ont.

The above are only a tithe of the positions held by our graduates. The full list, however, which I send herewith, ought to be sufficient to indicate that you are mistaken in your impression that Toronto is not doing her full share in advancing the development of industry. It would be equally easy to show that graduates of other Faculties of the University are playing an equally important part in the intellectual development of Canada.

A word in conclusion as to your commendation of the staff of McGill University and your depreciated reference to that of Toronto. I might remark that your opinion of the Toronto staff and its work is evidently not shared by the governors of McGill, as evidenced by the fact that they have secured on their staff the services of no less than six graduates of the University of Toronto.

J. LOUDON.

University of Toronto, February 2, 1903.

TO ENCOURAGE CANADIAN SHIPPING.

The Dominion Government have passed an Order-in-Council intended to insure that Canadian products or manufactures shall be transported or towed by Canadian vessels, even when they pass from one Canadian port to another over waters outside the Dominion. These regulations were made to stop the practice lately in vogue whereby a Canadian tug would take rafts or scows from the Canadian ports to the open lakes and there transfer them to United States tugs which would take them, almost to the Canadian port the goods were being shipped to, when another Canadian tug would take them in. Under the new rules, goods going from Canadian ports to Canadian ports must go all the way in vessels carrying the British flag.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, February 6, 1903.

HARDWARE.

THE wholesale hardware trade is very busy at present endeavoring to keep up with the orders being received for spring shipments. In fact, the largest dealers say that January, 1903, was the busiest January in years. Horse nails have seen another advance since last week, and as yet there is no market price on "M" brand. The discount on "Monarch" has been changed and is now 60 per cent. Building paper is another line that is on the up grade, and has advanced generally. Carpet felt is now quoted at $45, instead of $40. Soldering irons have also advanced and are quoted about ½c per lb. higher. An increase of 8c per dozen is also noted in re acting washing machines, and are now quoted at $4.50 each for round and $4.75 for square. The price of screen-wire cloth is very firm and the market is active. Snow shovels are still moving in small lots, and the trade expect to carry over a very small supply.

LAWN MOWERS.—A steady movement is noted in lawn mowers, and the prices are firm. We quote: 10½ in. wheel x 12 in. cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14 inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—There is a small amount of business doing and the market is still steady. There are no changes in the quotations, which are as follows: $2.80 per 100 lb. f.o.b. Montreal; $2.15 f.o.b. Cleveland, in carlots of 15 tons; $2.67½ f.o.b. Cleveland, in smaller lots.

GALVANIZED WIRE. No change to note in galvanized wire, and little business is being transacted. Our prices are as follows: No. 5, $3.70; Nos. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—The market is unchanged and is very quiet. We quote as follows: Bright and annealed, $2.50 per 100 lb. f. o. b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE WIRE.—A small business is reported this week in fine wire. The discount is still 25 per cent., with the following extras: 1 and 2 lb. hanks, 25c. per 100 lb.; ½ lb. hanks, 37½c. and ¼-lb. hanks, 50c.

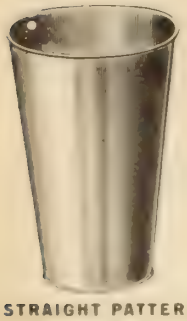
BRASS AND COPPER WIRE.—The discount remains at 62½ per cent., and the market is steady.

FENCE STAPLES. Spring business is good and the prices are firm. Our prices are as follows: $3 per 100 lb. peg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

WIRE NAILS.—A fair trade is being done in wire nails this week. Our prices are as follows: Carlots, $2.40 and small lots, $2.45 per keg f.o.b., Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

CUT NAILS.—A decided improvement is noted in this market during the last two weeks. In carlots, the price is $2.40 and in small lots, $2.45 per keg.

SAP PAILS and SPILES



STRAIGHT PATTERN

FLARING PATTERN

HORSE NAILS.—Another advance has taken place in horse nails since our last issue. We quote: "M" brand, prices on application; "C" brand, 10, 10 and 7½ per cent. off; "Monarch," 60 per cent.; and "Peerless," 51 and 7½ per cent.

HORSESHOES.—A fair trade is being done in horseshoes and the prices are steady this week. Our quotations are as follows: Iron shoes, light and medium, pattern, No. 2 and larger, $3.35; No. 1 and smaller, $3.60; snow pattern, No. 2 and larger, $3.60; No. 1 and smaller, $3.85; X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.45; No. 1 and smaller, $3.70; feather weight, all sizes, 0 to 4, $5; toe weight, all sizes, 1 to 4, $6.25. Shoes, more than one size in a keg, 10c. per keg extra. f.o.b. Montreal only.

RIVETS AND BURRS.—There are a few orders coming to hand, but the market is quiet. Discounts are as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—The demand at present is very light. Discounts follow: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent.; full square carriage bolts, 55 per cent., machine bolts, 50 and 5 and 10 per cent., coach screws, 66 2 3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50, 5 and 10 per cent. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3¼c. per lb. off list; hexagon nuts, 3¾c. per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—There is no change in the prices of screws and the trade is quiet. We quote: Round head bright, 82½ and 10 per cent.; flat head bright, 87½ and 10 per cent.; brass, round heads, 75 and 10 per cent.; brass, flat heads, 80 and 10 per cent.

CORDAGE.—A fair demand is reported for manila rope. We quote as follows: Pure manila, 11c.; British pure manila, 12c.; sisal, 11c.; double lathyarn, 11c.; single lathyarn, 10½c.

BUILDING PAPER.—There are several changes this week, and our prices are now as follows: Tarred felt, $1.75 per 100 lb.; 2-ply, ready-roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 55c. per roll; dry fibre, 55c. per roll; tarred fibre, 60c. per roll; O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN WIRE CLOTH.—This market is firm with a brisk demand. We quote $1.40 per 100 square feet.

FIREBRICKS.—The market is quiet and the prices remain the same as last week. We quote as follows: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—There is little doing in cement at present, and we quote: Canadian cement, $1.90 to $2.25; German, $2.20 to $2.30; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel ex store, and American, $2.10 to $2.20 ex cars.

OPEN HEARTH STEEL

...SHOVELS. A number of small orders for immediate shipment have been received during the week. We quote as follows: "Habitant," $2.25 to $2.40; "Vulcan," 40 per cent. off; steel railroad shovels, 15 and 5 per cent. off.

FIRE SHOVELS. The trade in fire shovels is fair at the same discounts as mentioned last week, as follows: No. 70, 85½ to 90c. per dozen; No. 55, 55 to 60c.; No. 57, $2½ to 90c.; No. 60, $2½ to 90c.; No. 65, $1.37½ to $1.45; No. 80, 50 to 55c.; "Duplex," No. 7, $1.21; No. 9, $1.52; No. 11, $1.82.

COAL HODS. There is a fair inquiry for sorting up, but the bulk of the trade is over, and our quotations are as follows: Japanned, 16 in., $4.50 per doz.; 17 in., $4.80; 18 in., $5.10; with gold band, 17-in., $5.10; 18-in., $5.40. Galvanized, 16-in., $6.20; 17-in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

LANTERNS.—The demand is good and prices steady. Our quotations are as follows: Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7 per doz.; dash-board, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper-plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

METALS.

The activity in the metal market continues and a few lines are likely to increase in price in the near future. A slight advance has taken place in bar iron and it is now quoted 10c. higher. The shortage of coke and the scarcity of cars are making the pig-iron furnaces afraid of a shortage in supplies. In fact, during the past few months, it is claimed that 30,000 tons of pig have been imported from Scotland. All pig iron imported from Scotland this year has come in under the preferential tariff, at a duty equal to $1.67 net per ton. So far, most of the Canadian furnaces have been able to operate, but the owners appear somewhat afraid they will have to close down. The outlook for copper is very bright, and it has been stated by good authority that copper will not sell less than 13c. per lb. in the United States this week. The tin and lead markets are also very firm. On the foreign markets Canada plates are somewhat weaker, and bright Canada plate is now quoted at £8 5s. per ton. Terne plates are quoted 3d. per box higher in sympathy with the advance in lead and tin.

BAR IRON. There is a slight increase in bar iron this week. We quote as follows: Merchants' bar, $2.10; horseshoe iron, $2.35; forged iron, $2.30.

BLACK SHEETS. A fair demand continues and the prices are firm. We quote 28 gauge, $2.65; 26 gauge, $2.60; 20 to 24 gauge, $2.50; 8 to 20 gauge, $2.50.

GALVANIZED IRON.—Business is quiet and the market prices remain unchanged. Quotations follow: No. 28, Queen's Head, $4.40; Apollo, 10½-oz., $4.30; Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand, $4.05. For less than case lots 25c. extra is charged.

LEAD PIPE. There is no feature in the lead-pipe market this week. Composition and waste are quoted at 8c. and ordinary at 7c. The discount is 37½ per cent.

IRON PIPE. There are a few changes in iron pipe that we would call to the

"SUN," care of Hardware and Metal, 232 McGill St., Montreal.

attention of our readers. Quotations follow: Standard pipe, per 100 feet, in lengths under 19 feet: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1 in., $5.20; 1¼, $7.35; 1½, $8.95; 2 in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.15; ½, $3.85, ¾, $5; 1-in., $7.20; 1¼, $10.05; 1½, $12.20; 2-inch, $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, ½, $4.20; ¾, $5.25; 1-in., $7.55; 1¼, $10.55; 1½, $12.75; 2 in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1-in., $9.55; 1¼, $13.25; 1½, $16; 2 in., $21.90. For threads and couplings, 5 per cent. is added. Trade discount, 5 to 7½ per cent.

TINPLATES.—The prices are very firm on the local market. We quote: Cokes, $4.25 to $4.50 and charcoals, $4.75 to $5.00.

SOIL PIPE AND FITTINGS.—Business in soil pipe is very quiet and the prices remain the same. Discounts are: Light soil pipe, 3 to 6 inch, 50 per cent.; medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8-inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.: extra heavy fittings, 8-inch, 45 per cent.

PIG IRON.—The market is firm and no desire for future contracts. We quote $23.50 to $24.50, ex store, Montreal.

INGOT COPPER.—There is a tendency to advance in ingot copper. We quote $13.50 to $14.50 per 100 lb.

INGOT TIN.—A firm market is reported. We quote $32 to $33.50 per 100 lb.

PIG LEAD.—We quote: Carlots, $2.90 and less than carlots, $3.25.

STEEL.—There is a steady demand for steel and the market is firm. Our prices are as follows: Sleighshoe, $2.10 to $2.20; tire, $2.20 to $2.25; spring, $2.85 to $3; reeled machinery, $2.75 to $3.00; toecalk, $2.65 to $2.75; machinery (iron finish), $2.10; mild steel, $2.05; square harrow, $2.15.

TOOL STEEL.—The demand for tool steel is fair and prices are steady. Our quotations are as follows: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

CANADA PLATES.—There is a fair demand for Canada plates. We quote: 52s, $2.60 to $2.70; 60s, $2.70 to $2.80; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.45 to $4.55.

TERNE PLATES.—The market is firm. We quote $7.50.

COIL CHAIN.—The demand for all kinds of chain keeps good. We quote: No 6, 11½c.; No 5, 10 to 10½c.; No. 4, 9 to 9½c.; No. 3, 8 to 8½c.; ¼ in., 6½ to 7c. per lb.; 5-16, $5 to $5.20; 5-16 exact, $5.25; ⅜, $4.25; 7-16, $4; ½, $3.95 to $4.05; 9-16, $3.85 to $3.95; ⅝, $3.65 to $3.75, ¾, $5 to $5.20; ⅞, $3.30; 1 in. $3.15 to $3.25. In carlots an allowanre of 10c. is made.

SHEET ZINC.—The market is quiet. We quote from $5.75 to $6.

ZINC SPELTER.—There is very little moving in this line. We quote $5.25.

SOLDER.—Business is fair and prices remain unchanged. We quote: Bar solder, 20c. and wire solder, 18c.

Our Metallic Ceilings and Walls

Are an ideal finish for all kinds of buildings, because they combine both beauty and utility.

We make an almost countless assortment of artistic designs—the plates fitting accurately, the joins imperceptible and the pattern continuous in perfect precision throughout.

The sanitary superiority, fireproof protection, handsome effect and moderate cost appeal to all progressive people.

You can scarcely afford not to handle these goods.

The Metallic Roofing Co., Limited

TORONTO WINNIPEG MONTREAL

SCRAP METALS.

Business in scrap metals is quite brisk this week and the local dealers, in consequence have been preparing shipments. The prices are very firm, and in a few lines have a tendency to increase. Our prices are as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $15 to $16; No. 2, $7 per ton; machinery scrap, $16.50 to $17; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6½ to 6¾c. per pound.

RAW FURS.

No changes have been made in the prices of furs this week and the market has developed no feature of interest. Offerings are fairly satisfactory and a moderate trade is doing at the following prices:

HIDES.

There is no feature to note in the hide market this week, other than that a keen competition continues between the buyers. The prices are firm. We quote as follows: No. 1 hides, 8c.; No. 2, 7c.; No. 3, 6c. Calfskins, 8 to 10c., and lambskins, 75c.

—

MONTREAL NOTES.

Bar iron has advanced 10c. all around.

An advance of $3 per dozen has taken place in re-acting washing machines.

Ingot copper is very firm, and the price is expected to go higher in a few days.

CASTOREUM—.................... $5.00 to $6.00 per pound.

ONTARIO MARKETS

Toronto, February 6, 1903.

HARDWARE.

BUSINESS keeps up in a satisfactory manner. Shipments, so far this season, have been largely on account of orders from Manitoba, the Northwest Territories and British Columbia. There has been a great volume of trade booked in Ontario and Quebec for future delivery, but shipments to points in these Provinces have been of a small sorting nature. The heavy booking for future delivery would indicate that the retailers expect changes in the tariff, and in view of this expectation are keeping themselves well covered in staple lines. All factories seem to have as much business ahead of them as they are able to take care of for some months. They are, however, finding trouble in securing some lines of raw material, notably malleable iron. Advances are noted this week in washing machines and building paper. Other lines are unchanged.

BARB WIRE.—A few orders are still coming in. Base price is now quoted as follows: $2.55 from Cleveland, and 10c. less in carlots. From stock, Toronto, $2.80.

COILED SPRING WIRE.—Buying of this line has been active, but orders are now well in. Prices are steady. We quote: No. 9, $2.75; No. 11, $3.40; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlots of 15 tons, 5c. less, with freight up to 20c. allowed.

GALVANIZED WIRE.—A few orders come in still. Prices are steady, and are as follows: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE.—There is not much doing now. We quote the base price as follows: $2.50 per 100 lb. Oiling, 10c.; coppering, 60c. and tinning, $2 per 100 lb extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—The activity is about over, and our quotations are still as follows: $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS.—Prices are well maintained, but there is nothing doing. We quote $2.50 per keg.

HORSE NAILS.—No change. The demand is small. Quotations on "M" brand have been withdrawn. Prices are unchanged. Discounts are: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "Monarch," 65 per cent., and "Countersunk" head, 65 per cent.; "Peerless," 50 and 7½ per cent.

HORSESHOES.—There is a fair trade with prices steady. Our quotations are as follows: Iron shoes, No. 2 and larger, light medium and heavy, $3.45; snow shoes, $3.70; light steel shoes, $3.55; featherweight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—The demand is fairly active. We quote: Flat head bright, 87½ and 10 per cent. discount; round head bright, 82½ and 10 per cent.; flat head brass, 80 and 10 per cent.; round head brass, 75 and 10 per cent.; round head bronze, 65 per cent. and flat head bronze, 70 per cent.

RIVETS AND BURRS.—A more active demand is noted, and our quotations are as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—No change in the situation nor prices. Prices follow: Carriage bolts, common ($1 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—Shipments are light, but orders for later delivery are arriving in generous quantities. Prices are unchanged. The discount is 45 per cent, and the list price has been reduced $3 per dozen for Olds' goods, $2 for Gray's and $1 for Burns'.

ROPE.—Orders are of a small nature. We quote: Pure manila, 14c.; British manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3-cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—No change in discounts is noted, they continuing at 60 and 10 per cent.

LAWN MOWERS.—There is still an active demand, and we quote as follows: Woodyatt, 12-inch wheels, $7.50; Star, 12-inch wheels, $5.50; Daisy, 12-inch wheels, $4.90; Philadelphia, 10-inch wheels, $6; Ontario, 10-inch wheels, $12.75. The other prices are in proportion.

BUILDING PAPER.—An all-around advance of 5c. is noted. The demand keeps up well. The prices are as follows: Dry sheathing, grey or straw, 35c. per roll; tar sheathing, grey or straw, 45c. per roll; dry fibre, 50c. per roll; tarred fibre, 60c. per roll.

RANGE BOILERS.—There is still an active demand. The prices are steady: 18 and 30 gallon, $6; 35 gallon, $7; 40 gallon, $8; 52 gallon, $12.50; 63 gallon, $19; 82 gallon, $23; 100 gallon, $31, and 120 gallon, $37.

PLUMBERS' BRASS GOODS.—A good brisk business continues and prices keep firm.

STOVES AND RANGES.—There is not much doing. Last week's advance is well maintained.

SCREEN DOORS.—Orders continue to come in well. We quote as follows: Screen doors, common, two or three panel, walnut stained, 4-inch style, $6.60; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3-inch style, 20c. per dozen less.

CEMENT.—Business continues to improve and the prices are steady, as follows: Canadian Portland, $2.40 to $2.50; hydraulic, $1.35 per barrel.

METALS.

The conditions are practically the same as a week ago. The demand for shipment from stock is excellent for this season of the year, while bookings for forward delivery are also satisfactory. The general trend of prices on the market is upward, but no changes are reported.

PIG IRON.—The shutting down of the Hamilton smelter has accentuated the firm feeling in pig iron, but prices have shown no change. We quote: $23 to $25 for No. 1 and $22.50 for No. 2 at the Canadian furnaces. No. 2 Summerlee is quoted at $25 on track, Toronto.

STEEL BOILER PLATES.—We quote $2 per 100 lb. at Pittsburg.

TOOL STEEL.—There is an excellent movement, with prices firm. We quote: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8c. to 9c.; Park's "Silver," 12 to 14c.; Park's Special," 15 to 20c.

MILD STEEL.—Prices continue steady. We quote $1.90 per 100 lb. at Pittsburg and $2.75 per 100 lb. on track, Toronto.

SPRING STEEL.—No change, and we quote $3.50 per 100 lb. on track, Toronto.

BAR IRON.—The demand has been excellent and prices are well maintained. We quote the base price as follows: $2.05. Extras cut to length while rolling: 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft., by special agreement, according to length and size.

BLACK SHEETS.—The demand continues active. We quote as follows: Common, $3.15 for 28 gauge and dead flat, $2.50 for 26 gauge.

CANADA PLATES.—Import orders are of generous proportions and are being taken at about 10c. per box less than last year. Small orders from stock are being received. We quote as follows: All dull, $2.90 to $3; half-polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—The demand from stock is fair for this time of the year. Import orders are still being taken, prices being practically the same as last season. The stock prices keep steady, and we quote as follows: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—Business has eased off considerably. Prices are firm at last week's advance. We quote $31 to $32 per 100 lb.

TINPLATES.—A better demand is reported. Prices are steady. We quote as follows: Charcoals, $4.75 to $5 and for cokes, $4.25 to $4.50 per box.

COPPER.—Ingots are in better demand, as the outside markets are stronger. Sheet copper is also active. We quote as

follows : Ingot copper, $13 and sheet copper, $22 to $23 per 100 lb.

BRASS.—Unchanged. The discount is 15 per cent.

LEAD.—There is a good movement. The prices are unchanged at $3.50 per 100 lb for pig lead and $3.75 for bar lead.

IRON PIPE.—The demand keeps brisk. Prices steady. We quote per 100 ft.: Black pipe, ⅛ in., $3; ¼ in., $2.30 to $2.40; ⅜ in., $2.65; ½ in., $2.85; ¾-in., $3.65; 1 in., $5.20; 1¼ in., $7.35; 1½-in., $8.95; 2 in., $12.55; 2½ in., $20 to $21; 3 in., $24 to $25; 3½ in., $30 to $32; 4-in., $37.50 to $38.

ZINC SPELTER.—Brisk movement. We quote 5 to 6c. per lb.

ZINC SHEETS.—In considerable demand. We quote the base price as follows : Cask lots, $6 to $6.25 and part casks, $6.25 to $6.50.

SOLDER.—A better inquiry. The prices are steady at 20c. for guaranteed half and half, and at 17 to 18½c. for wiping

ANTIMONY.—Business is in small lots. The price is steady at $9 per ton.

PETROLEUM.

There is no change in prices. The volume of business is decreasing. The Union Petroleum Co.'s prices are as follows : Lily White, Canadian, 18c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less.

OLD MATERIAL.

The demand is active, but deliveries are moderate. No changes are noted. We quote : Heavy copper and wire, 10½c. per lb.; light copper, 8 to 8½c.; heavy red brass, 9½c.; heavy yellow brass, 7½ to 8½c.; light brass, 5 to 5½c.; lead, 2 to 2¼c.; scrap zinc, 3c.; iron, No. 1 wrought, $13 per net ton; No. 2 wrought, $4.50; machinery cast scrap, $15.50 to $16; stove plate, $10; malleable and steel, $6 to $6.50; old rubbers, 6½c. per lb. and country mixed rags, 50c. per 100 lb.

HIDES, SKINS AND WOOL.

HIDES.—There is a good supply and no change in the market. We quote as follows : No. 1 green, 7½c. ; No. 2, green, 6½c. per lb.; No. 1 green, steers, 8c.; No. 2 green, steers, 7c. per lb.; cured, per lb., 8¼ to 8¾c.

CALF SKINS.—We quote : Veal skins, No. 1, 6 to 14 lb. inclusive, 10c.; No. 2, 8c.; No. 1, 15 to 20 lb. inclusive, 9c.; No. 2, 7c. Deacons (dairies), each, 60 to 70c.

SHEEPSKINS.—Fairly good supply. We quote 80 to 90c.

WOOL.—An advance of 1c. is noted. We quote : Unwashed wool, per lb., 8½ to 9c.; fleece wool, 16c.; pulled wools, super., per lb., 15 to 17c.; ditto, extra, 19 to 20c.

TALLOW.—Tallow is very scarce. We quote 5¾ to 6c. per lb.

SEEDS.

Red clover is quiet after the recent excitement caused by the export demand. Prices are fairly maintained. In alsike there is a large offering with little or no export trade. Prices are dull. Timothy is quiet with a somewhat larger offering. Prices are steady. We quote as follows : Alsike, prepaid aboard at outside points, per bush., $5.75 to $7 ; red clover, prepaid aboard at outside points, per bushel, $6.50 to $7.25.; timothy, prepaid aboard at outside points, per bushel, $1.75 to $2.25.

NOVA SCOTIA MARKETS

Halifax, February 3, 1903

THE hardware trade of January was considered very satisfactory especially in all seasonable lines by the various business houses. The volume of business done has been more than the usual January average, and everything denotes a steady increase of trade between this and the regular opening of spring trade. Fairly good orders are being booked for later delivery, and the travellers are well satisfied with the work they are able to do in the way of immediate business. If nothing interferes with present plans, there will be a heavy spring and summer trade in all lines of builders' requisites. Much work in this line is being projected, and no doubt the greater part will be carried out.

* * *

Much interest centres now in turpentine. The price quoted here is now 20c. more than during the autumn months, and there is every prospect that the price will rule higher. The stocks on hand are not large, and if the primary market reports continue as they are at present, any advance will have to be marked up here. It is coming on the time when considerable of this article is handled and the upward movement is consequently disturbing calculations of contractors and others who may require considerable quantities. Linseed oil is also uncertain and prices unsettled. No change has taken place in the price during the week, but dealers are shy in booking orders for spring or summer delivery at a fixed quotation. The price of linseed oil, no doubt, will be affected by turpentine, in which there is reported an unusually small output.

* * *

To meet German competition, the barbed and galvanized wire manufacturers have made a reduction of about 15 to 20c. per 100 lb. This reduction will hold good, no doubt, until the small amount of German wire (about 5 per cent.), is entirely shut out. Dealers here admit that they prefer the Canadian or American article, but that customers sometimes demand the lowest-priced—regardless of quality, and they have to supply it. The present reduction will bring about a parity, with the chances in favor of the home product.

* * *

A new rolling mill is to be erected in Dartmouth, principally for the working up of old iron. The building is to be 200 ft by 90 ft. The carpenters are now figuring on the work, and construction will be commenced as soon as the weather permits ... ing the foundation

* * *

The retail hardware trade, which was unusually good during the holiday season, has continued steady through January, a large business being done in winter goods, such as horse rugs, sleigh bells, skates, small sleds and the apparatus for winter sports. Only a comparatively small amount of retail trade is looked for in January, and the dealers are quite satisfied with what has been done as compared with

MANITOBA MARKETS.

WINNIPEG, February 2, 1903.

TRADE is moving steadily, and houses are all working on spring shipments. The only change of importance during the week has been the sharp advance on bluestone. The advance amounted to $1 per 100 lb., making the present price $5.75. This is an important change here, where enormous quantities of bluestone are used for the disinfecting of seed wheat. Turpentine has also advanced 2c. per gal. There is talk of an advance in linseed oil, and quotations in white lead have been withdrawn from this market in anticipation of a change in prices. The new petroleum schedule has been given in this week's list.

We quote as follows :

NOTES.

Eden, Man., is to have a new hardware store, T. B. Williams having just put in a well-assorted stock.

The Canada Cycle Motor Co. has just moved into their new premises, corner of Princess and William avenue.

Hamilton & McConnell, Carman, have dissolved partnership, Mr. McConnell having bought out Mr. Hamilton's share of the business.

All the implement houses of Winnipeg are working steadily to get things in shape for spring. The orders already booked are unusually heavy, and it is expected there will be difficutly in meeting demands.

Myron McBride, who has had charge of the credit department of The J. H. Ashdown Co. for a considerable time, is now taking charge of the finance department of Geo. D. Wood & Co.'s business. Mr. McBride is well-known throughout Winnipeg and the West.

FOREST CITY GOSSIP.

Office of "Hardware and Metal."

IN reply to your London representative's query : "Well, how's business last week ?" the answer comes with a beautiness that corroborates the words: "Business is all right, it's good !" Wholesale dealers are in good spirits as to the turnover, but competition in all lines is lively and sharp, every firm realizing that life and energy, at minimum of expense, is the only way to have good results.

* * *

Paint and oil dealers are now already on the quivive, and the wire-fencemen say

that the bulk of their year's business will be done in the next four months.

* * *

Retail hardwaremen say it is amusing sometimes to hear the growling and grumbling remarks of the consumers, especially those from rural districts, at the unexpected high price of coal oil. The recent strikes of new wells in Western Ontario, has given many a notion that a revolution in prices of petroleum was nigh; but the unlooked for has happened, and higher prices than for a long time prevail.

* * *

About 75 years ago, when wolves and bears were still prowling around this neighborhood, the father of the present senior member of the firm of J. Darch & Sons, began the harness trade in a very small way, working late and early, attending to every detail of business, and with unvarying success. And during all these years the store of this firm, on the Covent Garden Market has been a landmark, known throughout Middlesex and over Western Ontario. But now, the business has grown to such proportions that the limits of the last building were insufficient for their needs, and newer and more extensive premises were imperative. Their new building on market square, just alongside the old one, is a commanding edifice. It is seven storeys high, including the basement, is 40 x 60 ft., and built of white brick, with every requisite and modern improvement. An excellent view of the city of London is to be had from the roof, this being one of the most elevated buildings within the corporation. This firm manufacture horse cellars of a special grade, horse blankets, rugs, saddlery, valises, commercial and other trunks, and everything required by the saddlery and harness trade. Many of the kinds of material they use are imported, but all available goods of Canadian manufacture are purchased by them in preference. Samples are already being got ready for their travellers for solicitation of fall orders.

Kelterborn, of Wellesley.

W. H. L.

FOUNDRYMEN ADVANCE PRICES.

ON Monday, this week, the prices of all castings turned out of Vancouver moulding shops will be raised a quarter of a cent per pound. Rates quoted on castings at present are from three cents per pound upward, according to the kind required. The firms interested in the advance are the Vancouver Engineering Works, Limited, Ross & Howard, Letson & Burpee, N. Thompson & Co., Rushton & Jagger and the Schaake Machine Works.

The base rate charged for work turned out by machine tools in Vancouver will also be raised from 60 to 70c. per hour, the higher figure being rendered imperative by reason of the introduction of improved tools by all the shops. It is asserted by the iron works that the new rate on machine work will still be well below the prices prevailing in other cities on the coast. By the introduction of improved tools it is claimed the time consumed in completing a job is greatly reduced, and in that manner the charges are equalized.

John Marshall, West Superior, Wis., is looking for an opening in Canada for a drop forge horseshoe and removable calk factory. The Brantford Board of Trade is looking into his proposition.

WE AIM TO KEEP OUR CUSTOMERS.

We made many new customers during 1902, and what's more we have kept them. If the best quality of goods, right prices and fair treatment go for anything we can't help but keep them.

Standard Silverware is largely advertised, and is easy to sell. It combines artistic beauty with first-class quality and our "money back" guarantee is behind it.

Let us make you a customer. There is more profit and pleasure in selling silverware than in almost anything else.

The Standard Silver Co., Limited, Toronto.

Our Catalogue will help you. Sent FREE on application.

INDUSTRIAL GOSSIP

The Northwest Elevator Company will erect 11 new grain elevators next spring at a cost of over $1,700,000.

Isaac Barkey, et al, foundrymen, Stouffville, Ont., have given a mortgage to J. H. Ratcliffe et al for $8,000.

Mr. Manette, of Muskoka, has closed a deal with Davis & Sons, Kingston, Ont., to build him a steam yacht.

The Manitoulin and North Shore Railway and the Kootenay Contract Railway both ask an extension of their charters.

Incorporation is asked for the Nipissing and Pontiac Railway Company to build from New Lisklard to the foot of Lake Laquinze.

The International Asbestos Company, of New York, has secured a mine and a mill at Actinolite, Ont., and proposes working them.

The Ottawa Electric Railway will ask from the Dominion Government the right to increase its bonding power and other amendments to its charter.

Theodore H. Macdonald has been appointed manager of The Albion Iron Works, Vancouver, B.C., and it is probable that the works will now be enlarged.

A Glasgow, Scotland, despatch says that owing to depression in the Clyde shipbuilding trade, that the wages of 30,000 men engaged in that industry must come down.

Freight traffic on the G.T.R. is so heavy that it will be necessary to enlarge the yards at London, Ont., where a congestion of traffic has been threatened several times lately.

W. T. Farrell, of Vancouver, B.C., has started the construction of a new sawmill, which is to give employment to 100 hands. It will cost, when fully equipped with machinery, about $30,000.

Carrol D. Wright, commissioner of labor, is quoted as saying that the wages now paid in the United States are higher than ever before in the history of the country. The highest level up to the present time, he says, was made in 1892.

A Vancouver despatch states that R. Marpole, superintendent of the Pacific Division of the C.P.R., has announced that the C.P.R. will expend $1,000,000 in British Columbia this year, and that a new grand division will probably be made.

The Rhodes Curry Company, of Amherst, N.S., have just secured some important contracts for the building of freight, flat and refrigerator cars. Mr. Curry, who was in Montreal on Saturday last, took home with him orders for 325 cars.

Charles F. Holme, John Gerken, Valentine Schmidt, of New York, and Clarence P. King, of Philadelphia, seek confirmation by Parliament of their title by purchase to the Brockville and Westport Railway, and an extension of the rights the old company enjoyed.

A despatch from Essen, Germany, announces that the great Krupp steel works have been turned into a limited liability company. The greater part of the shares will remain the property of BerthaKrupp, the daughter of the late gunmaker, who is the richest heiress in Germany.

Germany's pig-iron production in 1902 amounted to 8,402,660 tons, against 7,785,887 tons in 1901. The provisional estimates of Germany's foreign trade put the imports at $1,428,000,000, an increase of $500,000. The exports are calculated at $1,251,500,000, an increase of $123,500,000.

W. J. Thompson, of The Canadian Tin Plate Decorating Co., which recently established works in London, Ont., where they were given exemption of $15,000 for one year, states that they will move at the end of the year unless better terms are granted them. He announces that they are in correspondence with Hamilton and Berlin, Ont.

The output of pig iron in the United States during 1902 was 17,821,307 gross tons, as compared with 15,878,354 tons the previous year and 13,789,242 tons in 1900. The total production last year was divided as follows: Bessemer, 10,393,165 tons; basis, 2,038,590 tons; foundry and forge, 5,389,549 tons.

The Ontario Slate Roofers' Association are agitating for a reduction on the tariff on slate, which is now 75c. per square slate. The strongest argument made for the reduction is that slate is not quarried in Canada, the bulk of it coming from Philadelphia. George Duthie, of Toronto, was chairman of a meeting held in Hamilton last week to consider the matter.

The Aluminum Production Co., of New Brunswick is being organized for the manufacture of aluminum at Newcastle, N.B. It appears that underlying the coal deposits of Queen's county, N.B., is an abundance of fire clay, which has been carefully tested, and found suitable for the manufacture of aluminum. The abundant supply of coal insures the other requisite of cheap power.

Sydney's claim to be the Birmingham of Canada is very well borne out by the weekly pay-roll of its various industries, says an exchange. The Dominion Iron and Steel Company employ 2,000 hands, whose pay averages $2.50 per day. This means $35,000 weekly, or $1,820,000 per year. The Dominion Coal Company has a force of 6,000, each averaging $2 per day, or $72,000 per week of six days, which is at the rate of $3,744,000 a year.

The contracts for three of the C.P.R.'s large carshops in Montreal have been let. Wm. Greer & Co., Chicago, have the contract for erecting two of these. One of them, the machine shop, will be 903 x 162 feet, and will cost $290,000; the other, the boiler shop, will be 440 x 113 ft., and will cost $110,000. The blacksmiths' shop will be 600 x 130 ft., and will cost $90,000. Lessard & Harris, of Montreal, have the contract for the last mentioned building.

INDIAN IRON AND STEEL.

Theee large schemes are afoot for the development of the iron and steel resources of India, says a Calcutta cable. The Bengal Iron and Steel Company has erected great plants at Barakar and Tatta, and its experts are examining the ores in Central India. Sir Arnest Cassell has sent an agent for a similar purpose to Jubbulpore, and Mr. Phipps, the secretary of The American Steel Corporation, is now in Calcutta, it is believed with a view of looking over the same business.

LARGE ORDERS FOR LOCOMOTIVES.

It is announced that the Chicago, Rock Island and Pacific Railway have placed an order for 225 locomotives, to be divided between the passenger and freight service, the total cost being estimated at $4,000,000. This is one of the largest, if not the largest single order on record for locomotives. The additional power-equipment has been made necessary by the enormously increased traffic of the system, as well as by new construction and acquisition of other lines. The management of the railroad states that the order was placed in September, 1902.

PIG IRON IN UNITED STATES.

THE pig iron situation at New York is summed up by The Journal of Commerce as follows: "Advices from the south are to the effect that more inquiry is being received by the furnace interests, and that a number of good-sized deals are pending. Most of the transactions, it is reported, comprise deliveries during the first half of the year, but there is occasional interest manifested in later deliveries. Eastern Ohio and Pittsburg district furnaces are reported to be making delivered prices in the central west at prices much lower than quoted on southern brands. Pittsburg reports that many of the valley furnaces are banked for want of fuel. The correspondent of The New York Metal Exchange, writing on Saturday, said: 'This has been a trying week on blast furnaces, steel plants and small finishing mills, as coal and coke are so scarce that hardly a manufacturing plant, large or small, in the Pittsburg district, has been able to run full time. Railroads are making strenuous efforts to better the situation, but so far without apparently much success. There is a greater scarcity of iron and steel products than for months, and prices are strong, with decidedly upward tendency. Some big manufacturing plants have been unable to get any coal on account of the embargo placed on it by the railroad and are shut down. This includes several steel plants and half a dozen or more sheet and tinplate mills. It would be hard to imagine a worse condition as regards railroad shipping facilities than exists in the Pittsburg districs, and it looks as though it might be worse before it is better.'"

TO MAKE ROPE AT BRANDON.

The annual meeting of the Brandon, Man., Binder Twine Co. was held in that city last week. President N. Walverton occupied the chair. Secretary S. H. Christie read the annual report, which was passed. A resolution was passed to increase the machinery and plant sufficiently to add the manufacture of rope to the twine factory, and it was decided to apply to the Legislature for power to increase the capital stock of the company from $100,000 to $200,000.

HARDWAREMAN'S SUDDEN DEATH.

A very shocking event happened here yesterday forenoon in the sudden death of Mr. Allie Allen, who has been employed in Mr. P. M. Young's hardware shop, Almonte. Mr. Allen was well known in Perth and Smith's Falls, where he formerly resided and carried on business. He is a brother of Mrs. A. J. McAdam, of Almonte. A few years ago his brother lost his life by drowning in the Rideau. He leaves a widow and three children, who have the heartfelt sympathy of the community in their sudden and awful bereavement.

THE VALUE OF APPEARANCES.

SURROUNDINGS have a great deal to do with one's appreciation of anything, says Success. You might be very hungry, for instance, but, on entering a cheap restaurant, where everything was dingy and dirty, where the crockery was very much chipped, thick, and not even clean, where the sense of smell was offended by the mixed odors of fish, flesh, onions, and all kinds of vegetables, where the floors, tables, and napkins were dirty, and where the waiters were greasy-jacketed and generally untidy, your appetite would disappear as if by magic. Nothing would appeal to the eye or to the nostrils. No matter how good the fare, you could not eat heartily amid such repulsive surroundings.

Let the same food placed before you in the cheap, untidy restaurant be served to you in the Waldorf-Astoria, or some fashionable restaurant, with the accessories of delicate china, snow napery, silver and glass, amid palms, and flowers and lights, with uniformed, attentive waiters to anticipate your wishes, and you will eat with a relish that which, in different settings, almost nauseated the eye.

Successful merchants who have made a study of business methods are well aware of this susceptibility to surroundings and general appearances. They cater to the eyes as well as to the judgment and common sense of their customers. They pay men large salaries to "dress" their windows attractively so as to "draw" patrons. With the aid of tempting show-windows, a choice arrangement of wares and the general attractiveness of their stores, backed by polite, neatly-dressed clerks, they sell goods which would become shop-worn on the shelves of less effectively arranged stores on the very same street.

The same principle is true in many other kinds of business. If a man enters a barber's shop, for instance, and sees soiled towels scattered around, one in use, perhaps, on a customer, or if he sees dirty shaving mugs, hair brushes, combs, and other toilet articles that are not scrupulously clean, he is at once prejudiced against the place and will not return.

We are often, it may be unconsciously, greatly influenced by appearances. An attractive personality clothed in a well-made and becoming dress will often win against more solid acquirements when combined with a disagreeable personality and slouchy, unbecoming dress.

GO STRAIGHT FOR YOUR GOAL

IN the early days of railroading in laying a track through hilly or mountainous regions, engineers went around most of the hills and curves, followed the valleys, and often turned aside from even slight obstructions, says Success.

Many young men in laying the tracks of their careers follow the methods of early railroad construction. They avoid every hill of difficulty, go around long curves, turn aside from every obstruction, no matter how trifling, and always follow the line of least resistance.

In our day, however, railroad engineers, in laying a track, follow as direct a route as possible. They go through hills, tunnel mountains, and span huge gorges, not only because a straight line is the shortest distance between two points, and thus saves time, but also because it lessens the risk of being wrecked.

A young man who believes that making a life is more important than making a living, will follow the methods of the modern railroad engineer. He will not shrink from the obstacles that spring up in his path. He will not creep around hills or mountains of difficulty. He will forge the way to his goal by the shortest and most direct route, no matter what oppose his passage.

It costs a railroad company more to tunnel mountains and span chasms than it would to build its road around those difficulties, but the time saved to its passengers and the risks avoided by following the safest and most direct route more than trebles its profits.

So, it costs a young man more in energy and perseverance to span abysses of ignorance, to force his way through mountains of difficulty in order to attain a sound education and special training for his work; it takes more effort and self-denial to build a straight, well made road through the hilly, rock strewn country of Life, than to make a long, winding, uneven road by avoiding the hills and rocks of opposition; but, like the engineer, you will find yourself more than trebly repaid for your trouble in forcing your way through all obstacles to your goal.

A straight road for one's career means honesty, the respect of those who have any dealings with you, the confidence of your bank, good credit, a high standing in your community, influence, individual power, enlarged opportunities for doing good, and, crowning good of all, it means self approval.

NEW IRON AND NICKEL COMPANY.

The Ontario Gazette announces the incorporation of The National Iron and Nickel Corporation with a capital of $5,000,000 divided into 5,000,000 shares of $1 each. The provisional directors are H. R. Frankland, J. F. Hamilty, J. K. Leslie, J. J. Walsh, all of Toronto, and W. A. Everett, Duluth, Minn. The head office of the new company will be in Toronto.

ESSENTIALS TO SUCCESS.

THE extent of the business done by the average dealer, in a great measure, depends upon his knowledge of his business, tact, and ingenuity. That every merchant does not study what to do to extend his trade is a fact too common to excite comment. A writer under the name of "The Kicking Customer," in The Minneapolis Coal Bulletin writes as follows:

I must confess that I am sometimes filled with wonder that some merchants succeed at all. A Bradstreet man tells me that the percentage of failures is large but no one has been able to tell me why some merchants have not failed long ago. I have one in mind who at this season of the year spends most of his time by the stove. When I call to make a purchase he collects himself, and after severe exertion ambles behind the counter, if his listless clerks have not bested him in the slow race and are there ahead. He is an expert on politics, can demonstrate that the lumber tariff is a robbery and that insurance is a humbug, but to save his neck he could not tell whether black tea comes from Japan, India, or South Africa. His books are usually two months behind, and if his clerks are any good when he hires them, they soon become infected with the Arkansas fever permeating the atmosphere.

Merchants of this class are usually telling their troubles to the trade. If their competitors are selling goods cheaper, they take pains that the fact is well advertised. There is nothing more tiresome than being forced to listen to one of these chronic faultfinders while he fumbles the twine around a package and waits for the customer to endorse his remarks. I believe it would be a good thing for all concerned if these merchants joined the suicide club, instead of being taken into an association of live merchants. What does the customer care for the merchant's trade troubles?

Some clerks are not only listless, but are guilty of premeditated carelessness. If they are working on a fixed salary, where they can afford to make faces at small trade, they do not lose an opportunity to do it. The proprietor may be blissfully ignorant of it and will probably continue so until he wonders why certain lines are not selling well. He may see a great light if he continues his investigations earnestly. I have endeavored to buy half a dozen common tumblers in one store three times, but the clerk in charge is too busy to show tumblers. I went into a Minneapolis department store to buy a coat for myself and found several anxious and willing clerks. When I asked for a smaller item, one of the saleswomen curled up her lip and said it was not in stock. She was mistaken to put it lightly. Even a kicking customer has some rights, and I would not apply for a coat at that establishment again out of pure fear of the curled lip of haughty Marie.

The grocers in our town have added a delivery service. One of the delivery boys brings the mud of the outer world into the kitchen, and hammers on the back door as if he had it in for one of the panels. That is another trade-maker.

A NEW PRICE LIST.

There has been an advance of about 50c. per dozen in all the cheaper lines of Dundas axes, and $6 per dozen is the cheapest axe to be had on the market this year. Further changes are expected in the near future. The following is the revised price list of the Dundas Axe Works:

Royal Wood Chopper	$ 6 00
Western, Gatineau, Hickory Whacker	6 50
Empire, Western pattern	7 00
Empire, wedge or half wedge	7 00
Pine Tree, round handle	7 00
Dundas Champion	7 00
Peerless, round handle	7 50
Keen Cutter, bevelled	7 50
All steel, full polish	8 00
Dundas Leader	7 75
Flint edge, hand made	7 75
Crown Jewel	8 00
Perfection Phantom, bevelled	8 25
Perfect Jewel	9 00
Scoring	9 50
Canadian, up to 4 lb	7 00
Joiners	7 50
Framing	9 00
Peerless, double bits	10 00
Dundas Champion, double bits	10 00
Crown Jewel, "	11 00
Handling extra, No. 2 handles	1 50
" No. 1 "	2 00

APPROVE OF ANOTHER RAILWAY.

At a public meeting held in Truro, N.S., on Saturday last the following resolution was passed:

"That this joint meeting of the Board of Trade and citizens of Truro, having considered the question of another transcontinental railway on Canadian soil, is of the opinion that one is immediately necessary on account of the immense and rapidly increasing productions of the Northwest, which existing railways are entirely inadequate to transport.

"That we are of the opinion that the next railway to be built for the purpose should be located considerably north of the existing lines, so as not only to develop a new area of the fertile lands, but also to insure the export business of the country to Canadian ports only, and thus prevent re-occurrence of the disappointment which has been experienced by Maritime Province ports in the past.

"That such a line would also commend itself on account of the military defence of Canada, that the trans-Canada railway having adopted the route recommended by Sir Sanford Fleming, would seem to meet all requirements."

PAINTS We manufacture these brands:—"LION," "PEERLESS," "OWL," "RAVEN," also Ready-mixed House and Floor Paints, Roof, Barn, Bridge and Brick Paints, Coach Colors, Varnishes, Japans, etc. Our prices will interest you. Write us.

Window and Interior Displays

Timely Hints and Suggestions.

CHARLES AUSTIN BATES, an authority on advertising, says: "Breaking in for your share of the trade that someone else gets is easy or difficult according to the leverage you use."

Systematic, careful advertising gives, perhaps, the best results, but window display keeps a close second.

Advertising is the long-range gun, but window display is the bayonet.

You advertise to bring the customers, and trim your windows to sell them the goods once you have brought them.

Advertising doesn't complete your part of the business. You may spend half your profits in advertising and yet sell little goods.

You may pay your advertising man $50 a week and force people to read your ads.

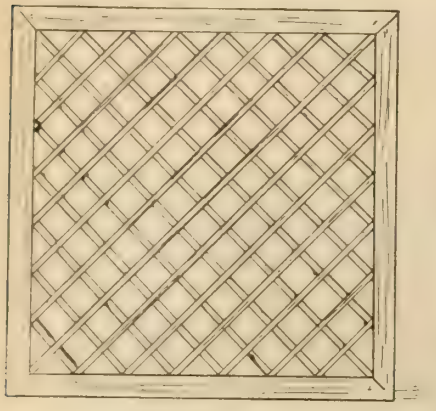

Fig 1.

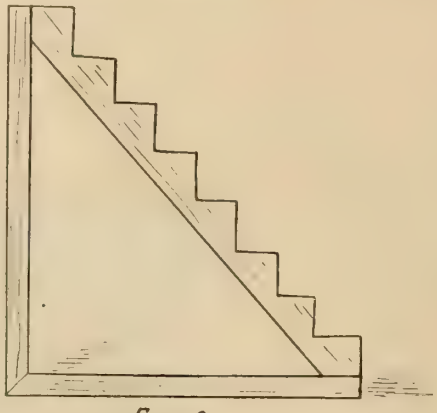

Fig 2.

Fig 3.

for their literary ability, but unless you have something to show to assist the advertising, your high-salaried clerk draws nothing but his money.

The advertising man and window-dresser must work hand-in-hand.

Quite likely you compose your own advertising matter, but don't attempt to do your own window-dressing if you wish to avoid neglecting the general business.

Window-dressing is not a branch of your business that occupies a few minutes a week and can then be dismissed for the rest of the week.

The man who wishes to make his windows talk must have the subject under constant consideration.

That is why I say employ a special clerk. He need not be constantly employed directly in the dressing of the windows, but his time will be fully employed in the auxiliary lines.

Your window-dresser can also be store decorator. Much of his time will be filled in looking up lines that are "stickers."

With these his usefulness or the opposite will quickly be evident.

If you have a line that has remained on your shelves for an unduly long time, or a line in which you are overstocked, tell him about it, and it will be his work to draw the attention of the people to it.

His ingenuity in this will soon determine his use to you.

But give him a free hand both in design and expenditure.

You must not expect him to obtain the best results by using your design to give the effect which is in his mind.

Let him alone and if he doesn't show results dismiss him.

Allow him to put a little money in his display. A good display cannot be made for nothing.

He may have in mind a cheap mechanical window, or find it necessary to build back-grounds, partitions, covered stands, shelves, ect., and simply because these will cost a trifle don't forbid them.

You must have variety in your window whatever it costs, and your window-dresser should have enough interest in your business to limit his expenditure to common-sense.

Remember that $5 spent on a window may sell $400 worth of goods, and in the majority of cases the trimming can be utilized in another display.

There is a point just here observed too little by window-artists. When constructing a foundation for any display make the parts solid so that they can be kept for future use.

In this way much time and money is saved, and subsequent exhibits can be made with less thought.

Many fixtures are made which can be arranged in such different ways that the different effects are as distinct as if made with entirely different designs and foundations.

THIS WEEK'S ILLUSTRATION.

The three figures shown this week are fixtures which every merchant should have, as with them very many displays can be arranged, and almost every elaborate window requires some one of them.

Fig. 1 shows a lattice form which can be placed at the back of the window, covered or uncovered. It is very useful, too, for dividing a window into sections. The height should be about 4 ft., and the length made to fit the position it is intended for.

Fig. 2 is a support for shelves on which to show small goods. The steps can be made any size in order to provide any number of shelves. Boards are laid along the steps. A brace can be fixed to the inside in order to insure solidity. A few different sizes will be found serviceable for exhibiting the different sized wares you wish to show.

Fig. 3 is a cylindrical shaped fixture made of round ends fastened together with slats. A half-dozen of these should be on hand of different sizes, as they form, perhaps, the most useful fixture that can be had. They are used for supports for shelves and platforms, and, in special arrangements, very effective windows can be made by use of these as supports for arches and overhead decorations.

These fixtures should be made of solid wood, solidly and neatly put together, as they are always serviceable. In the majority of cases they should be draped with cheap cloth, such as cheesecloth, or concealed in some way. Keep a supply of different sizes on hand, and the trimming of the window will be much facilitated.

THE WORLD OF FINANCE

Some of its Features.

TEN new branch banks have been opened in Canada since January 1. The Union Bank has new branches at Didsbury, Fort Saskatchewan and Limsden, in the Northwest Territories; the Metropolitan Bank at Brockville, Brussels and Milton, in Ontario; the Royal Bank at Caraquet, N.B.; the Sovereign Bank at Havelock, Ont.; the Bank of British North America at Fenelon Falls, Ont., and the Dominion Bank at Madoc, Ont.

* * *

Bradstreet's summary of failures for 1902 show that there have been 20.6 per cent. fewer failures and 27 per cent. less liabilities in 1902 than in 1901. Lack of capital is the predominating cause of failure, 134 of the total 1,095 being due to this. In spite of the great talk of the fever of speculation during 1902 only seven failures are traced to this cause, against eight last year and 10 in 1900. The excess of liabilities, too, are only $103,000, while in 1901 they were $243,000, and in 1900, $227,000.

* * *

Last year 256 limited liability companies were organized in Scotland with a total capital of £7,762,220, as against 202 companies in 1901 with a capital of £5,512,142. Of the companies registered last year, 60 per cent. were private concerns, i.e., the shares were not offered to the public. In 1902 the percentage was more than 70. The iron and steel trades, with 33 new companies, head the list in number. Chemical and oil companies, although only two in number, have the heaviest capital, which amounts to one-fifth of the total capital. The public are just as eager as ever to put faith in gold mines, and last year almost £1,000,000 were risked. In educational, theatrical and musical companies, about £175,000 was invested.

* * *

The tedious work of auditing the books of the British-Columbian Packers' Association is in progress. Fifty separate sets of books have to be examined, but Mr. Helliwell, the auditor, hopes to have it completed some time during the month of February. It is expected, according to a statement issued by AEmilius Jarvis & Co., that a dividend of 7 per cent. will be declared on the preferred stock and yet leave a good balance to the credit of the company. On account of the shortness of the run and the anticipated advance in prices, the company's agents in England have been ordered to stop selling.

* * *

For the past week Canadian-stock markets have been very quiet, but no cause for alarm is discernable. Money is easier on account of the large exports of cereals and the buying of American stock in London. By this means our foreign obligations have been considerably reduced, but until the reduction is greater, AEmilius Jarvis & Co., think that the banks will discourage speculation.

* * *

In the banks the only items of interest are the favorable aspect of Bank of Ottawa stock, which is selling around 225, due to the new issue of stock, and the statement of the Metropolitan Bank, after six weeks of business. This statement shows a profit of $1,696.66, after the payment of all expenses in connection with the organization of the bank and its management.

The strike of a second oil gusher in the Raleigh, Ont., oil fields has renewed the interest in drilling operations and is being made the most of by oil-company promoters. This second well is reported to have been so rich that when oil was reached it spouted nearly 60 feet, and with such force that the well could not be capped for half an hour. This is interesting, but it should also be remembered that the Gurd gusher started its career with a similar outburst, but has greatly moderated its force since. Moreover, since it was found, thousands of dollars have been sunk in speculative drilling, and the field has been almost abandoned by experts. It is believed now that there are several pools of oil in the district and that two of these have been struck. Whether they will yield anything like enough to pay for the money spent in drilling operations or not is as yet a question. The man who invests in an oil company is taking a long chance.

* * *

The Toronto branch of the Royal Bank of Canada, under the local management of W. F. Brock, was opened for business on February 2.

* * *

A branch of the Union Bank of Canada has been established at Baldur, Man.

* * *

A very satisfactory report was placed before the shareholders of the Metropolitan Bank at the first annual meeting of this institution. Besides the payment of all organization expenses, there remained a very creditable balance to the good. Two new branches are shortly to be opened in Toronto, as also one in Montreal and one in Petrolea. Their prospected new building, for head offices, to be located on the corner of King and Jordan streets, Toronto, promises to be an imposing piece of architecture.

* * *

We are very glad to learn that A. E. Jarvis has greatly improved in health and every thing points to his speedy and complete recovery.

* * *

The Bank of Toronto is opening a new branch in the Board of Trade Building, Montreal. The offices are rapidly approaching completion and will open for business about the beginning of March.

* * *

The annual meeting of the shareholders of the Beaver Paper Co., Limited, was held at the head office of the company, 7 Scott street, on Saturday, January 31. A most satisfactory and encouraging report was presented, showing that the company had a very prosperous year, the business having steadily increased every month until it is at the present time nearly double what it was one year ago. A hearty vote of thanks was tendered the directors by the shareholders for their careful and prudent management of the business in raising it to such a degree of success. A half-yearly dividend of 8 per cent. was declared. The direc-

tors elected for the ensuing year were: Geo. Powley, M. A. Benjamin, Chas. Burls and Jas. Donohoe.

FACILITATING SAVINGS.

UNDER new regulations recently adopted to govern the savings department of The Canada Permanent and Western Canada Mortgage Corporation, the facilities afforded its depositors have been greatly increased, and deposits may now be made and money withdrawn as may be desired according to the most modern methods. To enable all classes to avail themselves of the facilities and to encourage the savings of small sums, the company receives deposits of $1 and upwards. Interest at 3½ per cent is paid twice a year, or if not withdrawn by the depositor, is added to the account, and bears interest at the same rate. In its thoroughly modern and well-equipped offices on Toronto street is a trained and courteous staff of officers, and depositors who visit the office in person are assured of having their business transacted expeditiously and to their entire satisfaction. For the convenience of its lady customers a special writing room has been comfortably fitted up for their sole use. Every facility is also afforded those at a distance from the office for making deposits or withdrawing either interest or principal by mail. The company has a paid-up capital of $6,000,000, a reserve fund amounting to $1,500,000 and assets exceeding $23,000,000. It stands, therefore, in the front rank of our strong financial institutions.

PAINT, OIL AND BRUSH TRADES

TURPENTINE STILL ADVANCING.

ON Wednesday the price of turpentine was advanced in Toronto to 92c., a rise of 1c. in the week and of 10c. in less than three weeks. The rise, as has been already noted, is due to manipulation of prices in Savannah, where the turpentine output seems to have been successfully cornered.

The condition of the market in New York on Wednesday was reported by The Journal of Commerce as follows: "Holders were fairly firm in their views yesterday, though the market was by no means as responsive to the bullish Savannah advices as might have been expected. An advance of ½c. here was the only feature, and that did not occur very early in the day. In fact, all day some spirits were offering at 66c. for machine made barrels and 65½c. for oils, some even selling at these prices, but there were also sales at 66½c., with rumors of 67c. being asked, which tended to strengthen things a little. The large increase in the stock on hand in yard, however, creating an uncertainty as to how much of it would be offered on the market kept the prices from soaring and spirits could have been obtained at any time during the day for 65½c."

It will be seen from the above that the advance in New York has been from 3 to 3½c., almost as much as that noted here for the week. As matters now stand it looks as if record quotations might be reached before the reaction sets in, but it is probable that business will be of a hand-to-mouth nature until a lower level of quotations is introduced by the new crop.

PAINT PRICES UNCHANGED.

The item which appeared in these columns some weeks ago stating that The Francis Frost Co., Limited, Toronto, had advanced their prices, was erroneous. It seems that our quotation on this firm's famous "Ark" brand paints had been too low, and the new price furnished us was a correction of this low figure, not an advance recently made.

GETTING AFTER PAINT TRADE.

"I believe in hustling after paint trade," said a live retailer the other day. "When I hear that anyone in my town or district is going to build, I get after him right off, and get his order for as many lines as I can. I make it a point to sell to such buyers goods of the best quality I can persuade them to take. I get a comfortable margin, and, as a rule, I find that one customer secured in this way, brings others. In getting after this trade I find, too, that I get information that leads to many sales of other lines. I used to believe that I could not afford to leave the store, but I find I gain a great deal more than I ever can lose, if I ever lose anything in this way, which I doubt."

THE MACHINE OIL TRADE.

The hardware trade could make their grip on the oil trade by devoting special attention to a study of the requirements of machine and implement oil; be in a position to recommend the best oil for any specific purpose, and keep such a stock that any machinery or implement user in their district could at any time get supplies from them. The volume of business done in this line is not great, but it brings in some revenue and helps to bring the retailer into closer touch with the buyer.

PAINT AND OIL NOTES.

G. F Walsh, painter, etc., New Westminster, B.C., is selling out by auction.

It is reported that a 300-barrel-a-day oil well has been struck in Alberta, but particulars are lacking.

The death occurred on Thursday, last week, of Gilbert Pearcy, father of Sanderson Pearcy, head af Sanderson Pearcy & Co., the Toronto wholesale paint and oil house.

It is reported that The Standard Oil Company is making an investigation into the conditions prevailing at the oil fields of Calicia with a view of purchasing the entire properties. The price named is $10,000,000, but this is exclusive of some of the largest oil wells.

A SMALL BLAZE.

Fire was discovered in the paint warerooms of P. D. Dodds & Co., 188-190 McGill street, Montreal, on Tuesday night. The firemen responded quickly to the call, and one stream was sufficient to extinguish the outbreak. The shelves containing lamp-black and kalsomine were somewhat damaged. The loss will be fully covered by insurance.

PREPARED PAINT TRADE.

The feature of the paint and oil trade just now is the remarkable activity in orders of prepared paints for spring delivery. Retailers all over the country seem to be optimistic as to the activity of painting operations during the spring and summer months, and are anticipating such activity by exceptionally generous orders. The total volume of business of this nature is reported to be in excess of all previous records.

PAINT AND OIL MARKETS.

MONTREAL.

THE paint and oil market is active, and orders for future delivery are arriving by every mail. The demand for white lead continues unabated and is now becoming the main feature of the paint trade. Dealers are not at all anxious to sell. Linseed oil is a little easier this week. We quote 1c. per gallon less than last week. On the other hand, however, turpentine continues to increase and is 4c. higher than it was a week ago. The paris green market continues to be brisk, and a larger quantity is expected to be used this year. We quote:

GROUND WHITE LEAD.—Best brands, Government standard, $5.00 to $5.25; No. 1, $4.27½ to $4.87½; No. 2, $4.40 to $4.50; No. 3, $4.02½ to $4.12½; No. 4, $3.65 to $3.75 all f.o.b., Montreal. Terms, 4 months, or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—$5 in casks, and in kegs, $5.25.

DRY WHITE ZINC.—Pure dry, in casks, 6¼c.; in 100-lb. kegs, 6¾c. No. 1 zinc, in casks, 5¼c.; in 100-lb. kegs, 5¾c.

WHITE ZINC (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No.2, 6c.

PUTTY.—We quote: Bulk, in barrels, $1.80 per 100 lb.; bulk, in less quantity, $1.95; bladders, in barrels, $2.10; bladders, in 100 or 200-lb. kegs or boxes, $2.25; in tins, $2.20 to $2.50; in less than 100-lb. lots, $2.75 f.o.b., Montreal, Ottawa, Toronto, Hamilton, London and Guelph. Maritime Provinces, 10c. higher, f.o.b., St. John and Halifax. Three per cent. discount for cash in 30 days.

ORANGE MINERAL.—Casks, 7c.; 100-lb. kegs, 7¼c.; smaller quantities, 8¼c.

RED LEAD.—Genuine red lead, in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities, $5.75 per 100 lb. No. 1 red

USE ARK BRAND

That's good advice to give to any paint customer, because "Ark Brand" is an absolutely honest paint that gives perfect satisfaction.

"Ark Brand" is a most profitable line to carry, because it means increased patronage and consequent increased profits.

Dealers will find that a great selling feature of "Ark Brand" is the following guarantee: "Every can of "Ark Brand" is guaranteed to give perfect satisfaction if used according to directions. If it proves otherwise your dealer is hereby authorized to refund the amount of the purchase price."

This guarantee ought to be sufficient for any consumer and shows the confidence we have in the product.

Write for our special proposition for the exclusive handling of "Ark Brand."

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 9 to 9½c. per lb., and 10 to 10½c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 93c.; 2 to 3 bbls., 92c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

GASOLINE AND BENZINE.—We quote as follows: Benzine, 19¼c. and gasoline, ordinary, 21¼c. and engine, 22¼c. f.o.b. Toronto.

WINDOW GLASS.

MONTREAL.

The market for glass is steady, but as yet very little outside business is doing. Locally, however, trade is fair and several good-sized orders have been booked from contractors. Quotations are as follows: First break, 50 feet, $2; second, $2.10 for 50 ft.; first break, 100 feet, $3.80; second break, $4; third break, $4.50; fourth break, $4.75.

TORONTO.

There is a steady market, as prices are now well maintained. Import orders are coming in liberally and are of good volume this week. Our quotations are as follows: Under 26 in., $4.25; 26 to 40 in., $4.65; 41 to 50 in., $5.10; 51 to 60 in., $5.35; 61 to 70 in., $5.75; 71 to 80 in., $6.25; 81 to 85 in., $7; 86 to 90 in., $7.75. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days. Discount, 15 per cent.

The Klondike Mines Railway Company propose to extend their present railway to Gordon's Landing, on the Stewart River, a distance of 85 miles. E. C. Hawkins, the principal shareholder of the company, Seattle, Wash., has gone north, to examine into the proposition.

SYSTEM IN BUSINESS.

By J. E. W.

HARDWARE AND METAL has always endeavored to meet the needs of the storekeeping community in as many directions as possible. And to this end it is preparing to devote space from week to week for the discussion of business methods, and systems for taking care of business, and will not only urge storekeepers everywhere to see to it that their business be run in a somewhat methodical and systematic manner, but will offer practical and simple suggestions that will enable them to do so. Some system is an absolute essential in the conduct of any business, and storekeepers will find it in their own interest to keep track of suggestions that may be made from time to time.

Not that we have in mind, or approve elaborate schemes for small businesses that would only cumber and add to clerical work and worry, but suggestions which they themselves will apply and find as simple as they are practical. In short, suggestions which can be worked into any business, no matter how crude its operations have been. We will insist on the importance of systems, though there are instances in our mind where systematizing has gone mad, some houses spending enormous sums in expert services, only to find the suggestions unsuited to the conditions of their business.

The ideal system at all times, we are convinced, must be one fitted naturally to the requirements of your business and one which will carry it smoothly and easily with a minimum of error and anxiety.

It seems deplorable that there should be any neglect in so important a matter, and while in the past men have prospered in spite of this, conditions of trade have so far changed that we can safely say no success is now possible without some knowledge in this direction. Instances come to our notice from time to time of business conducted without any attempt whatever to employ system. We will not go into details here, but reserve some notable examples for another number. There is little doubt that failures frequently occur that might have been avoided by a little elementary knowledge of how to keep track of stock and accounts.

Happily, merchants everywhere are seeing the need of this, and it is the exception oftener than the rule to find the extremes of this deplorable indifference.

This is a time of rapid development and progress. The race is to the young and strong and we may add the knowing. There is no such strength as knowledge in any walk of life, and to succeed in business one must first learn the simple rudiments of the care of business.

NIAGARA AGREEMENT.

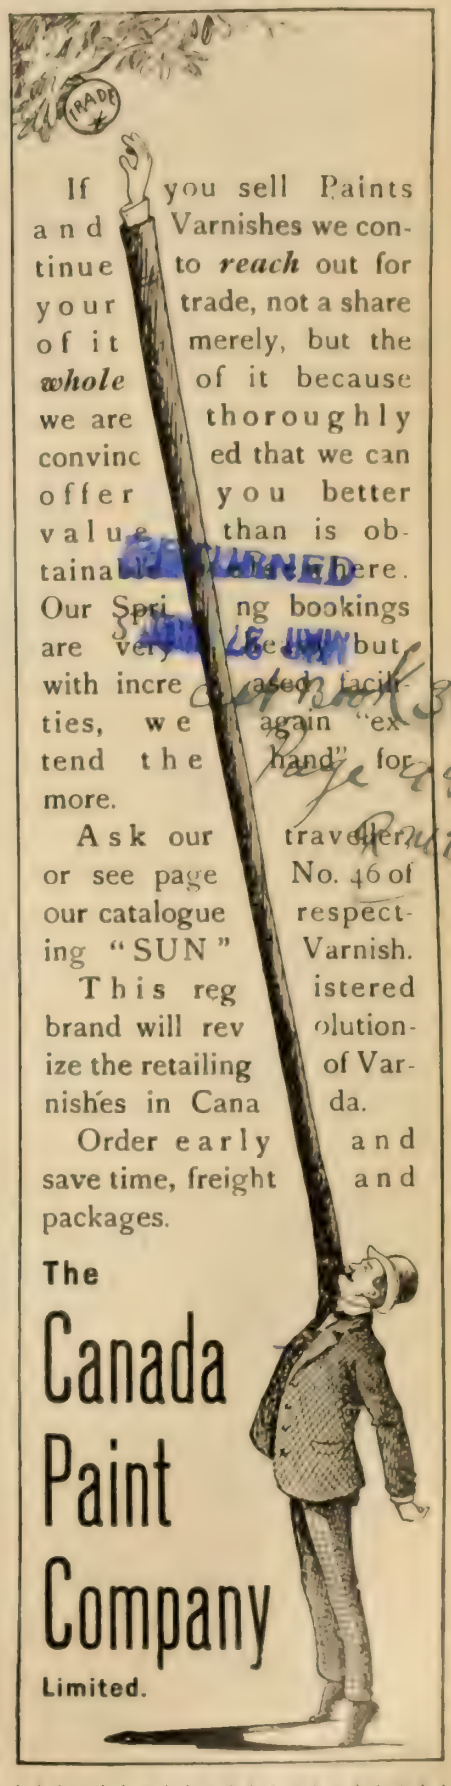
THE terms of the agreement between the Toronto and Niagara Power Co., the company controlled by Messrs. Mackenzie, Nicholls and Pellatt, of Toronto, and the Niagara Falls Park Commission, which have been approved by the Ontario Government, were given out on Saturday. The most important clause provides that the company shall not pool its interest nor amalgamate with other companies, this clause reading as follows:

"The said company shall not amalgamate with any other corporation or company heretofore or hereafter incorporated * * * for the purpose of generating and transmitting electricity without the consent of the Lieutenant-Governor-in-Council for such amalgamation, nor shall they enter into any arrangement or agreement for that purpose with any such company which may directly or indirectly have that effect, or which may or shall have the effect of keeping up the price or prices of said power, nor shall they enter into an agreement with any such company for pooling the receipts of the said company or of any part thereof with those of such other company, nor which shall provide for or have the effect of establishing a common charge or schedule of charges for the use of the said power, or any part thereof."

Another clause provides that the charge for electrical horse-power in Canada shall not exceed the price charged to cities, towns and consumers in the United States at a similar distance from Niagara Falls for equal amounts of power, and for similar uses, and this applies to all three companies chartered by the Ontario Government. From this provision, it is contended, the public will not only have the benefit of the competition between the three companies in Canada, but will also profit by the circumstances which keep down the price in the United States.

A POSITION VACANT.

A large hardware manufacturing concern in Montreal is advertising in this week's HARDWARE AND METAL for an experienced man to take general charge of their office. They are a reliable firm and salary will not stand in the way of the right man. A man speaking both languages is preferred.



HEATING AND PLUMBING

A NEW WAREHOUSE.

It gives us pleasure to note the expansion of the large business carried on in Quebec City by W. H. Wiggs, under the name of the Mechanics Supply Co. This business he founded in 1889 and has since occupied the same premises, but the great increase in his business during the last few years has obliged him to seek larger premises.

He has bought a large piece of ground on St. Paul street, with entrance in the rear on St. Andrew street, where he intends building one of the most up-to-date warehouses in Canada for the expeditious shipping of the various specialties he handles for plumbers, gas and steamfitters and electricians. These premises are only a stone's throw from those he now occupies, and are right in the heart of the wholesale business section of the city and in close proximity to the Canadian Pacific, Grand Trunk, Intercolonial, Great Northern, and Quebec and Lake St. John Railways, as well as to the Princess Louise Basin where all the shipments by water arrive and leave Quebec. The electric street car system passes his premises both back and front.

Staveley & Staveley, architects, have the plans on hand, and they will have produced a building which will be an ornament to the city. The base or first storey will be of cut stone, and the remaining three storeys of Milton and Laprarie pressed brick. Large and commodious warehouses will also be erected in the rear for storing iron pipe, radiators, boilers, and other heavy goods which they handle in large quantities.

Special attention has also been given to the office and advertising department, where everything of the most up-to-date will be installed ; being in a separate annex in the rear of the main building, they will be well lighted, large and roomy, and in close proximity to the selling and shipping departments. Mr. Wiggs' own office having a commanding view of all these several departments.

"GOT THE TOOLS" TOO SOON.

A meeting of the joint grievance committee representing the Toronto Master Plumbers' Association and the Toronto Journeymen Plumbers' Union held a second meeting this week to consider the case raised by the journeymen against W. Harris, Yonge street, who had, they claimed, given an apprentice "the tools of the trade," or, in other words, had allowed him to work as a journeyman before he was three years at the trade.

President Robert Ross occupied the chair, Messrs. Mansell, McGuire, Clapperton and Wilson represented the masters, and a committee of four the journeymen. The evidence was carefully heard, and the decision given that the apprentice in question should work until August, 1903, before being given the tools.

TORONTO MASTER PLUMBERS MEET.

There was a record-breaking attendance at the meeting of the Toronto Master Plumbers' Association on Tuesday evening. The addition of about a score of new members brings almost all the master plumbers of the city into the membership.

The reports of committees showed that the Association is in strong shape in every way, and that much interest is taken in its work by all the members.

The election of officers was the feature of the evening. President Robert Ross, of Parkdale, had done such good work during the past year that his re-election was insisted upon, though he desired to resign. The other officers elected were as follows : 1st vice-president, Geo. H. Cooper ; 2nd vice-president, Fred. Maxwell ; recording secretary, W. G. Adams, Parkdale ; financial secretary, T. W. Slean, Bloor street west ; treasurer, James Wilson ; sergeant-at-arms, Robert T. Robinson ; grievance committee, Wm. Mansell, George Clapperton, James Wilson, Louis Le Grow, Walter Benson, Geo. Cooper and J. McKetrick.

BUILDING PERMITS ISSUED.

TORONTO.

T. Falconer, for a $2,000 dwelling at 156 Sorauren avenue.

Geo. Henry, for a pair of $2,250 dwellings at 380-2 givens street.

B. G. Austin, for a $1,800 residence at 338 Marguerette street.

H. Larkin, for a $2,500 dwelling near Springhurst avenue on Close avenue.

Donald McArthur, for four dwellings on McGill street, to cost $10,000 ; D. Richards, architect.

Chas. Moulds, a $2,500 dwelling at the corner of Royce and Perth avenues ; F. Bird, architect.

The Flett-Lowndes Syndicate, Limited, for a $30,000 warehouse at 142-4 Front street west ; Symons & Roe, architects.

Geo. H. Hees, Son & Co., for a $10,000 warehouse on Pears avenue rear Avenue road ; A. R. Denison & Co., architects.

MONTREAL.

The following building permits were issued in Montreal during the month of January :

Paul Boucher, St. Hubert street, two-storey dwelling, $900.

Timothy Trupin, 704 Huntly street, one-storey dwelling, $1,000.

The C.P.R. blacksmith shops, $70,000 ; boiler shop, $110,000, and machine shop, $290,000.

PLUMBING AND HEATING NOTES.

Townsend & Walsh, plumbers, Ottawa, have assigned to A. P. Mutchmore.

The Canada Radiator Co., Limited, have registered to do business in Montreal.

Marcotte & Marcotte have been appointed curators of L. H. Gaudry, plumbers' supplies dealer, Quebec, who recently assigned.

Cann & Wetmore, plumbers, Pictou, N.S., have dissolved, and have been succeeded by Estella D. Wetmore, under the style of C. W. Wetmore & Co.

Master and journeymen plumbers of Ottawa are registering at the city hall these days, as required by the new plumbing by-law. Hereafter in building construction it will be necessary to take out a plumbing permit prior to commencing plumbing work.

Philip Gies, plumber and tinsmith, Berlin, Ont., has taken an interest in the J. Y. Shantz & Son Button Co. He will assume the duties of assistant superintendent, and spend a portion of the time on the road in the interest of the company. Mr. Gies thinks he will retain an interest in his present business, though no definite arrangements have as yet been made regarding this branch of the transfer. Mr. Gies has been for 14 years in the plumbing and tinsmithing business, seven years with partners and seven years by himself.

TRY A GOOD PAINT LINE

It is one of the helps to a good business in these days.

The **RAMSAY** Paint lines are studied out to give you a good business, to please your customers, to give you a profit, and to satisfy all.

BUILDING NOTES.

JOHN HACKNELL has decided to erect a block of stores on his property in Ottawa. Plans are now being prepared and they will be ready in about a month's time.

Wm. Braid, Vancouver, has announced that he will erect a $40,000 business block on Hastings street, Vancouver.

Residences will be erected in Hartney, Man., this summer by Mrs. Dycer, and Messrs. A. Mains, F. G. Lewis, G. Davidson.

Simington Bros., Moose Jaw, Assa., will erect a two-storey hardware store, 80 feet long, as soon as the frost is out of the ground.

Darling & Pearson, architects, Toronto, are preparing plans for the Canadian General Electric Company's new office building, which is to be a five-storey 122 x 186 ft. structure.

There is an opening for a contractor and builder in Paris. Among the buildings contemplated this season are a Y.M.C.A., public library, fire hall and electric light station. Further particulars can be secured from James Smiley, secretary of the Paris Board of Trade.

The Dominion Public Works Department has awarded the contract for the construction of a breakwater at Green Cove, Victoria, N.S., to Hugh McDonald, of North Sydney. The contracts for a breakwater at Sandy Cove and one at Tiverton, Digby County, have been awarded to Haydon & Oliver, of Digby, N.S.

PLUMBING AND HEATING CONTRACTS.

TORONTO.

The John Ritchie Co. have contracted for reconstructing the plumbing and heating of the Turnbull building, Opera House lane; for plumbing a building on the Esplanade for the Eckhart Casket Co., and the Toronto Roller Bearing Co.; for additions to the Nasmith Co.'s building, corner Jarvis and Adelaide streets.

Purdy, Mansell & Co. have the contract for plumbing six houses on Wells street for C. O. Dinnick; for plumbing and heating Mrs. W. G. Jaffray's residence on Grenville street; for plumbing and heating two houses on Delaware avenue for Mr. Robertson, Delaware avenue.

ST. JOHN, N.B.

John S. Coughlan, plumbing and heating engineer, has been awarded the contract for the heating and gas-piping and plumbing in Rufus R. Smith's new house, Seely street; also, the plumbing and gas-piping of John W. Vanwart's new house, Duke street. Mr. Coughlan is also steam-heating the York Theatre.

STANDARD IDEAL SANITARY COMPANY.

The corner stone of the factory of the Standard Ideal Sanitary Company was laid recently at Port Hope. The building is being erected in an admirable position near the docks, with excellent railroad and steamboat facilities. By May it is expected that the factory will be in operation, with a staff of some fifty-five operators.

The company has a capital of $100,000 and is composed principally of United States capitalists, who are bringing over not only the capital but the many years of experience in this line of work. The head office will be at Port Hope, with branch offices at Toronto, Cleveland and Detroit. The present manager, H. T. Bush, needs no introduction to the Canadian trade, having been long known to them as vice-president of the Ideal Manufacturing Co.

The company will manufacture porcelain enamel bath tubs, lavatories, sinks, soil pipes and fittings and waterpipes.

THE SPASMODIC ADVERTISER.

PROBABLY there is no class of business man so trying to the advertising man and publisher as the spasmodic advertiser. He is trying to the advertising man because he is always expecting to get him to do something permanent, and he is trying to the publisher because he does not give his publication a fair trial. You invariably find him an individual who knows it all. He talks learnedly about advertising, he will tell you that he tried several advertisements in such a publication and could trace but very little benefits therefrom. After quizzing him a while you will learn that he placed some half-dozen advertisements in the publication referred to and scattered them over a period of three years or more.

He will tell you that his uncle or his father, or some person else, retired from business a quarter of a century ago worth in the neighborhood of $150,000, and he never spent one dollar in advertising. He appears to forget that things on this mundane sphere have been moving pretty quickly within the past 25 years.

The merchant who was a success in business 25 years ago would be lost in the race for public favor to-day, unless he adopted modern methods. The merchant whom he referred to as having accumulated a comptence a quarter of a century ago and retired from business without spending a dollar in advertising, would undoubtedly be a back number in this age.

The spasmodic advertiser of to-day is a cross, in a business sense, between the merchant of 25 years ago and the up-to date advertiser of the present. Just so long as he is holding his own in the business world, even if he be only making a fair living, he is satisfied.

You will find that when he has a large stock of goods on hand, with business dull and bank drafts coming due in the near future, he will resort to the use of printer's ink to help him through.

Just so soon as he gets sailing in open water again, and no breakers appearing immediately in front of his business ship, he stops advertising, just when he should inaugurate an intelligent and well-planned campaign and forge right ahead. If he be a wholesale merchant and his traveller, when on a business trip call on and fail to sell to a certain retail house, will he, upon the return of his representative, request him not to call there again? No! Not much. He will command his traveller to call on the buyer of said retail house when on his next trip and keep on calling until such time as he gets an order. The business man should treat advertising in the same manner as he treats his traveller and his business. It necessitated several calls from his representative to make a sale to the retail merchant.

If a first advertisement fails to do the work, try a second; if the advertising matter is carefully prepared, profitable results will be forthcoming in the very near future.

Every business can be brought prominently before the people you desire to reach if you are wise in the selection of the proper medium. If you be a retailer, you are after the patronage of the consumer, then your best medium is the daily newspaper of widest circulation. If you are a manufacturer, wholesaler or jobber, you are after the retail merchant, then the best medium for you to employ to carry your message is the reliable trade newspaper.

Don't do your advertising in fits and starts; if you have something to sell all the time you should be on the lookout for buyers all the time. Select the best mediums in which to place your advertisements, see that your advertisements are properly constructed; if this be done intelligently and correctly, success will surely crown your efforts.

NOVELTIES.

There is a large and ever-growing demand for novelties that will sell in the mail-order field. It seems that when something of this sort does spring up and it is advertised extensively and with good results, then there are at once a score or more of mail-order dealers after that particular article of merchandise. As a result the sales of all are lessened and the article ceases to be of value. Novelty is one of the essentials to the success of the mail-order business and novelty backed by merit is almost sure to be successful. The latter part of this clause is nevertheless absolutely essential. Merit must constitute one of the principal attributes to the successful novelty in order to insure its continued success. If possible, in selecting an article or articles for exploitation through mail-order mediums, there should be an effort made by the dealer to secure something that is patented and something that he can absolutely control—not necessarily something that he has patented himself, but an article that he can consistently back for a certain sum with a division of profits with the inventor. There is a happy medium between the expensive and the absolutely cheap line of mail-order goods that should be striven for. Anything that can be profitably sold at prices, ranging from 50c. to $2, will bring good results. It is true the sales may be fewer, but the final results will be much more satisfactory, for, in addition to the large profit on each sale, there will also come to the advertiser a continuity of business that is desirable. Staple goods are in many cases advertised with profit. In this case the results largely depend upon the preparation of copy and the selection of mediums, the copy being made to fit the medium desired and the medium selected to be of such a calibre as will appeal to the class of people who will in all probability be interested in the goods.—Ad. Sense for August

---

BE LOGICAL.

In advertising there is nothing more essential than logic. Persistence is a valuable portion, but logic does more to sell the goods. A low price will not accomplish much unless the reason for that low price is logical and appeals to the judgment of the people. There are many times when the reason is omitted entirely. It may be from oversight or because the advertiser fails to appreciate the value of giving a reason. If the article is worth selling it will appeal to a larger number of people by a plain statement of why it is worth selling, but the reason won't sell the article unless it is presented logically. There may be many points about an article which make it attractive, but unless these are presented in a clear, attractive form, there won't be any use of expecting the returns to be very great. Advertising which lacks logic is like music that lacks harmony, in that it is not what the performer expects it to be. Advertising may not be good and still be logical, but the chances are that the logical advertisement will gain an interested person's reading and the logic of the proposition should do the rest.—Advertising World.

STOPPED GROWING.

The business man who is contented with his business, remarks Printers' Ink, has stopped growing. The man says he has business enough, therefore has no need to advertise, has reached the full flood of the tide. But after the flood is the ebb always. It is a law of nature that nothing shall remain in a state of rest. Everything grows, or it decays. No business can remain at a standstill for any considerable time.

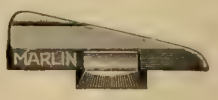
P. N. Garrepy, general merchant and miller, St. Paul's Bay, Que., is dead.

John H. McVean, of McVean & McVean, hardware merchants and agricultural implement agents, Dresden, Ont., is dead.

"ROCKY MOUNTAIN" FRONT SIGHT.

The Marlin Fire Arms Co., New Haven, Conn., have made an improvement to their "Rocky Mountain" front sight. The new sight, as will be seen from the accompanying cuts, acts as a bead sight, and is



claimed to be an improvement on any existing sight of this nature. It has all the advantages of an ivory bead sight, and, as the blade is made of strong German silver and in one piece, it should be more serviceable than ivory, because of its greater strength. The base is made standard size, so will fit any rifle with standard sight slot. It is made in four heights—low, medium, high and extra high. One of these sights will be sent to any reader of HARDWARE AND METAL desiring to examine it in detail upon receipt of 50c., stamps or cash. When ordering, advise model and calibre of rifle, as different calibres require a sight of different height.

A good galvanized-iron worker knows the different makes of his stock, and uses the one that pays him best.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

A PROFITABLE OPPORTUNITY

should be taken advantage of. Especially so when the tendency of Stoves and Ranges is upward in price.

Another advance last week makes it imperative to every energetic dealer to consult his own interests to buy where he can buy the best—quality considered.

We make **Stoves** and **Ranges** second to none and control our own prices. Let us quote you.

They are profitable and interesting.

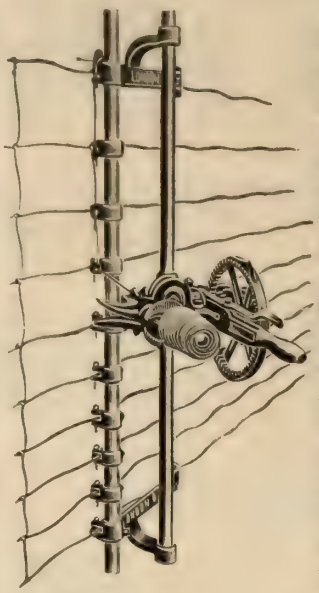
A FACT SAYS WEBSTER, "IS THAT WHICH IS REALITY."



It is a fact that it costs more for labor to weave wire fences in the factory and stretch it afterwards than to do it in the field with a LONDON

It is a fact that heavier, stronger and better built fences are being built all over this country with LONDON FENCE MACHINES

It is a fact that there is as much profit to the dealer in selling LONDON MACHINES and COILED WIRE as in roll fencing.

The extra cost of roll fence is in the factory; the trouble with it is in erecting. It can't be done perfectly.

Sell your farmer friends a LONDON. It will build a perfect fence and win their approval every time.

Write for prices.

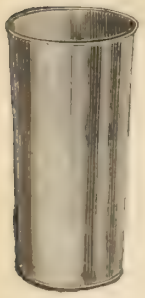
MONTREAL Limited TORONTO

Supplies for the Maple Syrup Season.

Sap Buckets . . .



—EXTRA DEEP AND STRAIGHT.
—THREE SIZES.

They possess many advantages over the ordinary flaring Buckets—being small in diameter they do not catch the rain or snow, and as they are very deep, they hang perpendicularly, and consequently will not overflow until full.

—Covers supplied if required.
—They nest close for shipping or storing.

We can also supply the ordinary Flaring or Western Sap Pails.

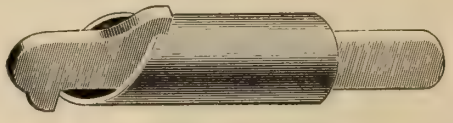
E. T. Sap Spouts.

MADE OF RETINNED STEEL—STRONG AND DURABLE.

Only require a ⅜-in. hole in tree.

It does not cover the inside surface of the hole; therefore a larger amount of sap is obtained.

Packed in card-board boxes.



Maple Leaf Sap Spouts.

Made in Bronzed Steel.
Require a ½-in. hole.
Has a shoulder which prevents it being driven in too far.
The hole in the tree is not exposed to wind and snow; consequently, sap will flow longer.
Packed in card-board boxes.

Syrup Cans, round or square.

Plain or decorated. Made in ¼, ½, and 1 gallon sizes.
Either Wine or Imperial Measure.

A full stock carried in all lines; orders shipped promptly.

TORONTO, CANADA.

HARDWARE AND METAL

VOL. XV. MONTREAL AND TORONTO, FEBRUARY 14, 1903. NO. 7.

COMMENT ON CURRENT TOPICS.

TRADE is expanding and it is only natural we should swell with pride.

• • •

Pelf is evidently more appreciated by Mr. Gamey than principle. And the fact that the pelf is for his constituency and not for himself does not materially alter the case.

• • •

Grains of truth will build a reputation and grains of wheat are building up the Canadian Great West.

• • •

Everyone is concerned in the transportation problem and its solution will doubtless fill everyone with transports of joy.

• • •

Now that war has started between Brazil and Bolivia we may expect many Brazilian "nuts" to be cracked.

• • •

In Canada the farmers cannot get enough "help," and in Europe the "help" cannot get enough work.

• • •

Some politicians are most self sacrificing. They are willing to sell themselves and their principles and to buy the "other fellows."

• • •

Canada's Great West is being built up by grains of wheat.

• • •

New Brunswick is to have a general election in a few weeks; and no doubt we shall hear of many professional men offering themselves as fit and proper persons for carrying on the business of the Province.

• • •

The promoters of the proposed Grand Trunk Pacific Railway have decided that the main line shall pass through Winnipeg. To have left Winnipeg off the main line would have been like Hamlet without Hamlet.

One hears a good deal these days from both political parties about "building up Ontario," but in pursuance of this object certain of the politicians do not appear very anxious about building up their own reputations.

• • •

The Socialist believes in the distribution of wealth, but when Andrew Carnegie proposes to distribute his wealth among public institutions the world over, he demurs. Is there not some inconsistency here?

• • •

It is thought that in union there is not strength as far as the efficiency of the Toronto Fire Brigade is concerned. And thus is the order of old maxims sometimes reversed.

• • •

Now that an election has been fought and won in Burrard, B.C., the contestants are preparing for a round or two in the courts.

• • •

The people of the Canadian Northwest have long had unbounded faith in the possibilities of their country. And judging from the tide of immigration which has set in towards the Northwest from Great Britain and the United States, there are many in these two latter countries who are imbued with similar faith. Faith can evidently build up a population as well as remove mountains.

• • •

York County Council a few days ago discussed the question of scarcity of farm hands and suggested that the Government interest itself in the matter. Perhaps, in an emergency, the clerks in the stores might be persuaded to come to the aid of the farmer in his hour of need.

• • •

Longshoremen's strikes drove shipping away from Quebec. It is to be hoped the threatened strike of the longshoremen at Montreal will be averted in order that the experience of the "Ancient Capital" may not be repeated in the "Commercial Metropolis."

• • •

The Toronto Trades and Labor Council has spurned the offer of Andrew Carnegie to give $350,000 to the "Queen City" for library purposes. Mr. Carnegie may or may not have been wrong in his method of dealing with his employes. But granted that all the wrong was on his side, can he make better restitution than by distributing his fortune, not for the benefit of the wealthy but for the benefit of students and others who cannot possibly buy for themselves the books they desire to study and read? If the idea of the Trades and Labor Council prevailed and the offer of Mr. Carnegie was rejected, Toronto would simply be cutting off her nose to spite her face.

• • •

Is it possible that the skeleton of the monkey found the other day while the old Parliament Buildings at Toronto were being torn down is the missing link between the legislators of the past and the legislators of to-day?

• • •

The seat for North York in the Ontario Legislature was vacated in order that the hard feelings and recriminations attendant upon election trials might be avoided. Judging from the character of some of the political speeches in that riding during the last few days, one would be almost inclined to the belief that the seat had been vacated that the opportunity might be afforded of repeating the recriminations of the last general elections plus those that have been raked up since.

• • •

It is to be hoped that Dr. J. Orlando Orr, the new manager of The Industrial Exhibition, will be able to successfully

prescribe for the ailments of the organization.

* * *

Business on the new Pacific cable via Canada is not very encouraging. It is claimed that the influence of The Eastern Extension Company has something to do in the premises. It certainly has a great deal to do in delaying the construction of the cable and it is scarcely likely that its adverse influence would cease with the construction of the line. Corporations do not stop fighting while there is a shot in the locker, whatever individuals may do.

* * *

The street railway strike in Montreal reminds one that while walking is good for the health it is extremely bad for the temper of those not accustomed to the pedestrian exercises of our forefathers.

* * *

The United States House of Representatives has adopted the Anti-Trust Bill. It is sometimes advisable for merchants to adopt a similar law.

* * *

The farmers of North Ontario met in Cannington on February 7 and formed an Association. The chief planks in their platform are opposition both to bonuses and to tariff increases. On both these questions the Parliamentary candidates will be asked to express their views, and the nature of their reply will determine the support each will get from the members of the Association. At least that is the intention. As the questions are delicate we may expect to witness some clever gyrations.

INCANDESCENT LAMPS.

The Ontario Lantern Co., Hamilton, manufacturers of the "Radiant Shelby" lamp for Canada, have recently decided to manufacture the Edison type lamp, in addition to the Shelby, and are now prepared to supply this pattern in the different candle-powers at special prices.

As the shape of the Shelby bulb is entirely different from that of other make lamps, they do not correspond when attached in fixtures with the Edison type lamp. For this reason they have thought best to manufacture and supply both kinds. This lamp will be called the new "Brilliant."

On account of some recent developments in connection with the spiral filaments "Brilliant" lamp, which they had intended placing on the market before this, it has been decided not to market this lamp until they succeed in overcoming the objectionable features, when the trade will be duly advised.

The Ontario Lantern Co. are now producing 1,500 incandescent lamps daily.

WINNIPEG OPINIONS RE LEAD DUTY.

At the annual meeting of the Winnipeg Board of Trade the question of increased protection to the lead industry was considered, the subjet being introduced by a report from the committee appointed to consider the matter. The report expressed the verdict that it would be a great benefit to Manitoba if the Dominion Government would grant such measures of relief as would place the lead-mining industry of British Columbia in a position to sell their product in Canada.

Treasurer A. Strang stated that there had been only five present at the committee meeting, and it was not advisable that so small a number should express an opinion. The Board had been careful not to ask the Government to impose higher duties. He didn't profess to understand the lead business. He was not opposed to assisting the people of British Columbia to develop their mining interests and find a market for their products; still, he understood that, no matter what protection they had, they would not be able to manufacture and export to other countries; they would only get the home market; the only question was whether the Government should tax the rest of the people to give them that.

J. H. Ashdown moved that the recommendation of the committee be endorsed by the Board. He was in the same position as Mr. Strang as to increased duties on products coming into the country; but, unfortunately, we have a protective tariff, and while that is the case, and we have an industry in the West which can be developed and can do a great deal for the population of the country, but which is languishing, he didn't know why we should not adopt the policy with them as is pursued with others. If we were on a revenue tariff it might be levelled up, but with protection it was a pity to allow the lead industries of British Columbia to suffer. The manufacturers of Montreal and the seaboard wanted lead as raw material, and were not willing to allow others to have the same protection as themselves; but while we have a protective tariff we should protect all.

A. L. Johnson said that previous to 1900 the lead was almost all exported to the United States notwithstanding the high duty, owing to favorable prices; but in January, 1900, The American Smelting and Refining Trust absolutely withdrew from purchasing Canadian product. As a result, some 50 mines had to shut down, and there was danger of the industry becoming extinct. While 30,000 tons of metallic lead was produced in Canada in 1900, last year there was produced less than 12,000 tons. The consumption in Canada was about 10,000 tons of lead, which is to-day Mexican lead, which is corroded in the United States and brought into Montreal on a low tariff. The Winnipeg Board of Trade should point out strongly to the Dominion Government the necessity of protecting this industry. He seconded the motion, which was then carried.

ADVANCE, HALIFAX!

A. M. Bell & Co., a progressive hardware and paint firm of Halifax, N.S., have found their present premises on Water street too small for their rapidly increasing business. They have purchased from H. G. Woods his property on Granville street, with 45 ft. frontage and running through 120 ft. to Hollis street. This is a fine site for a hardware store, being well located for retail business and not too far from shipping facilities for wholesale trade.

Bell & Co. will tear down the buildings at present on the property, and begin at once the creation of a handsome five-storey brick structure, which they hope to occupy in time for the summer and autumn trade.

A member of the firm may take a trip through the middle and western part of Canada on the lookout for new ideas along this line. In the meantime they would like to get ideas from readers of HARDWARE AND METAL.

WINTER EXCURSIONS TO THE WEST INDIES.

The ss. Dahome, of the Pickford & Black Line, which sailed from Halifax on January 26, had over 30 first-class passengers; the ss. Ocamo, on February 9, has 25 now booked, and the ss. Orinoco, which will sail February 23, already has 18 or 20 on her passenger list. She will probably have between 40 and 50 excursionists making the round trip to Demerara, calling at 12 different islands. The voyage takes 42 days, and costs $130, meals and berth included.

Geo. P. Ridge, hardware and flour and feed merchant, Pontypool, Ont., has sold out to Thos. Pollard.

C. M. Irwin, hardware merchant, of Grand Valley, Ont., has sold that branch to Nicholl, McCulloch & Duke.

The stock of F. J. Mayhew, general merchant, Thamesville, Ont., was advertised to be sold by auction on February 11.

A. E. Mathews, general merchant, of Clareholm, Man., has sold out to The Clareholm Co-operative Co., Limited.

Good Selling Values.

The Sherwin-Williams Household Varnishes are quick selling and profitable for the dealer.

Strongly advertised directly to the consumer and of good quality, they are specialties that every dealer should investigate.

They are not experiments. Each one has proved itself a worthy article, specially adapted for its purpose.

Excello — A rubbing and polishing varnish of exceptional value. It is pale in color and suitable for the finest work.

KOPAL — For general use outside and inside. A good hard drying varnish at a popular price.

No. 1 FURNITURE VARNISH. — A reliable varnish for furniture and general use.

MAR-NOT — A durable floor varnish. Has a tough elastic wear-resisting surface.

They're good varnishes, every one of them. They're trade-winning specialties that every dealer should have on his shelves.

Write us to-day for prices and full information on this line.

WINNIPEG DEPOT, 147 Bannatyne St., East.

Willson & Ingram, agricultural implement agents, Wollesley and Sintaluta, have sold out the Wolseley business to McPhail & Thompson.

NEW FIRMS AND CHANGES

A. Lemoine & Frere, general merchants, St. Eugene de Grantham, Que., have registered.

The Canadian Automatic Light Co., Limited, Walkerville, Ont., has obtained a charter.

Ross Bros., Limited, hardware merchants, Edmonton, N.W.T., have become incorporated.

W. Felton & Co., general merchants, of Atikokan, Ont., have been succeeded by Snellgrove Bros.

Savage & Wilson, general merchants, of Port Burwell, have been succeeded by Williams & Wilson.

W. H. Reid, agricultural implement agent, Strathclair, N.W.T., has been succeeded by C. E. Crawford.

S. E. Thompson, agricultural implement agent, Watford, Ont., has been succeeded by Richardson & Saunders.

The Aluminum Projection Co., of New Brunswick, Limited, are applying for a charter; capital, $1,000,000.

J. T. Bell, agricultural implement agent, Medicine Hat, N.W.T., has been succeeded by Rhodes & Bell.

FIRES

H. Donohue, grocer, Montreal, has been burned out; insured.

John Wootton, general merchant, of Manitou, Man., has been burned out.

Duncan Gunn, hardware merchant, of Manitou, Man., has been burned out.

May Bros., hardware merchants, Montreal, were partially burned out; insured.

The Hudson's Bay Co., general merchants, Fort Frances, have suffered loss by fire.

TRADE IMPROVING IN B.C.

A. B. Trites, general merchant, Fernie, B. C., is in Toronto on business. He will visit New York and return home via Kansas City. He says trade is improving in British Columbia. Mr. Trites went to British Columbia a few years ago from the Lower Provinces, and is now one of the most successful business men in the West.

BOYCOTTED A FACTORY AND LOST IT.

THE residents of Beaver Falls, Pa., are probably now realizing how absurdly shortsighted they have been during the past year. Last year 35 machinists employed by The Keystone Driller Co. struck, and were soon replaced by non-union men. The strikers then made every effort to drive the non-union men out of town, and fights were numerous. The boycott was also resorted to, and when it was seen that the plant continued to operate despite their riotous acts they became even more bitter. The plant was destroyed by fire last November, and while it was never learned how the fire started, indications pointed strongly to incendiarism. Throughout the strike the local authorities sympathized with the strikers, and the machinists employed were given no police protection whatever. Nor did the authorities show any great interest in apprehending those supposed to have caused the fire, although circumstances pointed strongly in certain directions. For this reason the stockholders who have their money invested have decided to remove the plant to Scottdale, Pa., and there is every indication that Beaver Falls will lose an industry that employed fully 100 of its cltizens and disbursed more than $2,000 in wages weekly.

CELLULOID VS. BONE.

The practical economies of manufacturing cause many changes in the uses to which some materials are put, as has been well illustrated of late in regard to bone, although owing to the excellence to which the manufacture of celluloid has now been brought, says Ironmonger, the use of bone in the cutlery trade is gradually dying out, it appears that the latter material now plays quite an important part in the making of surgical appliances. A Sheffield dealer in hafting material has just shown me an order for 100 gross of bone pipes for enemas, which he intends to turn out of corner-pieces of shank-bones. Formerly such pieces were thrown on the waste-heap. The same dealer also tnrns many bone joints, for use with rubber surgical appliances, and uses odds and ends of bone in a dozen other ways for the same branch of trade, besides supplying bone in various forms for veterinary instruments. Evidently bone is regarded as a good antiseptic material.

The Fred. Robinson Co., Revelstoke, B.C., are enlarging their saw mills at that place, at Comaplix and at Camborne.

IN THE CASE NOW PENDING

wherein Hardware and Paint Dealers everywhere are the judges, the people of Canada and other countries the jury, and **CHURCH'S COLD WATER**

ALABASTINE

for twenty-five or more years on trial, it is very evident that **ALABASTINE** is the only wall-coating in demand. The judge in charging the jury—stocking **ALABASTINE**—and the jury in rendering the verdict—buying and using **ALABASTINE** have shown conclusively that the claims of the **ALABASTINE COMPANY** have been clearly and emphatically established. The evidence submitted is in order as follows:

SUPERIORITY—To sell goods of any other manufacture, the dealer **must** recommend them "the same thing, or, as good as ALABASTINE."

DURABILITY—ALABASTINE is manufactured from a cement base; can be recoated, and hardens with age, a claim that no other manufacturer has substantiated.

ARTISTIC BEAUTY—Made in twenty beautiful tints and white. Any degree of decorating can be done with ALABASTINE from plain tinting to the most elaborate in relief decorating known to the decorator's art,

IS SANITARY—Sanitarians condemn in strong terms the use of wall paper for the walls of living rooms, on account of the poison used in its manufacture, and the decaying mouldy paste on the back of it. Kalsomines that rub off on everything that comes in contact with them are not to be recommended. Physicians all agree that "walls to be healthy must breathe." ALABASTINE is porous and permits the free passage of air.

IS CONVENIENT—Being ready to use by mixing in **cold water.** The inventor of this process, Mr. M. B. Church, was the first to produce a wall-coating to be mixed with cold water that was practical. This feature is patented in Canada and other countries. ALABASTINE in this form has absolutely displaced hot-water preparations, and forced kalsomine manufacturers, at the risk of patent infringement, to attempt to imitate this process.

In accordance with above verdict and the facts stated, this court hereby affixes the great seal of the manufacturers of the greatest wall-coating to be found anywhere in the world.

MACHINERY

SAFE-GUARDING MACHINERY IN THE SHOP.

ALL civilized nations have enacted laws for the safety of working people employed around machinery, writes Julius Moersch, in the Journal of Political Economy. Specific laws which refer to the safeguarding of machinery are general. The beneficial effects of such legislation can best be observed in the efforts of mechanical engineers to devise means by which all points of danger to an operator of a machine may, as far as possible, be guarded, and the modern manufacturer, in this country at least, has shown great skill and ingenuity in solving this problem. He has been so successful that it is safe to say, safety guards, aside from being useful, to-day, are also an ornament to machinery.

"Let us look at some modern laundry machinery. There we find that all gears and cogwheels are effectively shielded. The big steam mangle with its three pairs of large rollers has a roller guard in front of the feed roller, which makes it absolutely impossible for the operator's fingers to be caught between the heated rollers, and the top of the mangle is protected by an iron screen. This screen is there for the sole purpose to prevent the operator from reaching over the rollers if she should want to rescue a sheet which has been going the wrong way, or to straighten out a piece of fabric which got doubled up. The extractor has been provided with a foot brake, and the outside bowl is covered by a wire hood, and it is impossible to reach down into the revolving inner bowl as long as the same is in motion. The pressman in a modern printing establishment may work with a feeling of perfect safety around his press, for all gearings have been guarded by ornamental shields. Woodworking machinery, which is operated at high speed, has also received due attention. The old-fashioned wooden tables of jointers, shapers, and saws have been replaced by solid and smooth iron tables, and their different mechanical devices for the purpose of guiding the operator in his work are safe and easy to handle. A great source of danger by the operation of circular saws has been eliminated or reduced by the adjustment of a steel splitter to the saw table, behind the saw. The splitter prevents the wood which is to be worked upon from binding on the saw; for, if a piece of wood closes in on the saw, it will be hurled back with great force, and numerous are the fatal accidents which in this way have occurred. Passenger and freight elevators have been provided with self-arting safety devices, which hold the cab securely to the sliding guides in case of a break of the cable, and the former chains and handbars on freight elevator landings have been giving way to automatic raising and lowering gates. Statistical researches ascribe fully 50 per cent. of all accidents to workmen on machinery, to exposed collar set screws and unsafe shaft couplings, but the old fashioned collar with its protruding, square-headed setscrews and the shaft coupling with exposed boltheads and ends, an eyesore to a mechanic, have been replaced by safety collars and couplings. To-day there is hardly any excuse for an accident caused by exposed collar setscrews or shaft couplings with projecting bolts, and operators of establishments where any such accidents occur should be held to strict account for the same. Safety collars and couplings do not cost any more money than the old-fashioned ones, and it is hard to conceive why their use has not become universal. Some machine shops which have no conception of the progress of times cling stubbornly to old customs, old practices and styles. They absolutely disregard the safety factor in the construction of machinery, and, to-day, as well as in former days, they will turn out old type collars and couplings. But the number of these is steadily decreasing."

ANOTHER POWER COMPANY.

The incorporation of another large power concern, The Hamilton, Cataract Power, Light and Traction Co., is announced in The Ontario Gazette. The authorized capital is $5,000,000 and the provisional directors are: Hon. J. M. Gibson, James Dixon, J. R. Moodie, J. W. Sutherland, of Hamilton; John Dickenson, M.P.P., Glanford township; and J. A. Kammerer, Toronto, several of whom are now connected with a company of a similar name. Mr. Kammerer stated recently that the new company's relation to the old one would be determined at the annual meeting of the latter at Hamilton. The capital of the old company was $4,000,000 stock, besides bonds. The idea was to extend the existing plant two miles south of St. Catharines, where 5,000 h. p. was now developed.

OTTAWA'S INDUSTRIAL PROGRESS

ON Thursday evening, last week, in an address on "Ottawa's Industrial Progress," James W. Woods gave some information of interest to manufacturers. He said: "The fact that Ottawa enjoyed the same privileges of freight rates as Montreal and Toronto, indicated that its position, situated as it was on the main line of railroad connection, was quite as favorable from the point of view of transportation as that of either of its two older and as yet larger rivals. Large manufacturers of certain goods quoted similar prices delivered at Montreal, Toronto and Ottawa.

"It is not necessary in Ottawa, as is so often the case in larger places, to locate at an inconvenient distance from Customs house, post office, banks, and other centres. Land may still be secured in the very centre of the city at reasonable prices. In fact, land well situated for manufacturing or commercial purposes can be obtained at from 10 to 50c. per square foot.

"There is no other place in Canada or the United States where such large and easily-developed waterpowers exist in such close proximity to a city already raised to a position of importance by its railroad connection and water communications, only awaiting the development of its natural resources to place itself in a

position of the first importance as a manufacturing centre. The development of this waterpower is proceeding rapidly and has already reached 50,000 h.-p., while within reasonable distance there are waterpowers sufficient to develop over 750,000 h. p. The total minimum h.-p. of the portions of rivers within reasonable access or railways or canals is estimated at 917,403, of which only 58,400 is now in use, leaving 859,003 h.-p. available. This power can be readily obtained in large quantities for $15 per h. p., as compared with $25 up to $40 per h.-p. elsewhere, and the close proximity of the powerhouse insures a much more satisfactory and uniform energy, with a minimum of waste.

"The second of the two most important items in this cost of production or manufacturing is that of labor. Up to the present time the manufacturers of Ottawa have been particularly fortunate in their labor market and everything points to a continuation of this great advantage. In spite of the growing demand for labor, skilled and unskilled, there has never been any dearth of competent workmen in Ottawa. Living for the laboring man is cheap, wages fair, work always to be had, a fact which attracts labor.

"Ottawa enjoys as low insurance rates as any other city in the Dominion.

"The total industries of Ottawa and Hull number 221, and the capital invested reaches $13,083,790. The number of employes was 9,353 and the entire amount spent annually in wages $3,158,304, while the value of the products was $10,885,748. These figures are large, but not as large as they should be, for they were taken shortly after the big fire, when many industries were destroyed, which have since been rebuilt on a much more extensive scale."

SCOTCH ENGINE BUILDERS COMBINE.

A London, Eng., despatch states that the Scottish locomotive builders have practically completed a combination of the trade in Scotland. Hitherto there has been frequently mutual rivalry among the builders, which hindered successful competition with foreign makers. The Scotchmen believe that by combining they will be enabled to multiply the recent successes achieved by them in Canada, Japan and India against American and German competitors. The capital of the combination will be between £2,000,000 and £3,000,000 sterling. The combination at present embraces three Glasgow firms, Neilsen, Reid & Co., The Hyde Park Locomotive Works and Sharp, Stewart & Co., employing 7,000.

MACHINERY AND ELECTRICAL NOTES.

THE Jenckes Machine Co., of Sherbrooke, Que., have installed in The Granby, Que., Reduction Works, one of the largest ore-crushing plants in Canada.

The Roberval, Que., Electric Company have applied for incorporation.

Carmichael Bros., machinists, have registered to do business in Montreal.

Robt. W. Runciman, machinist Wingham, Ont., has sold out to J. Vasbinder.

The People's Light and Power Company, Limited, are applying for incorporation.

The Brennan Mill, Hamilton, Ont., will be ready for the installation of machinery in April.

The Canadian Automatic Light Co. have been incorporated in Walkerville, Ont., with $40,000 capital stock.

The Dominion Coal Co., Limited, will erect a modern coal-landing plant in St. John. G. H. Duggan is preparing the plans.

The Stuart-Arbuthnot Machinery Co., Limited, Winnipeg, have changed their style to The Stuart Machinery Company, Limited.

The Sherbrooke Iron and Manufacturing Co., Sherbrooke, Que., are changing their name to The Megantic Iron, Steel and Electric Power Railway Co.

After a legal struggle with L. A. Campbell, of Rossland, the city of Nelson, B. C., has secured a site for a power station and will develop its own electricity.

The St. John, N.B., Street Railway Company will expend $250,000 in improvements to the powerhouse. Much of this will be spent on new machinery and wires.

Robert Murray, of The Rat Portage Iron Works, returned home from a trip to the east last week. He made arrangements while away for the establishment of new machine works in Winnipeg.

The electricity of the Shawenegan Water and Power Co., brought from the Falls, 84 miles, to the limits of Montreal, over aluminum wires, and thence distributed, was turned into the city on Wednesday for the first time over the Lachine company's wires.

A representative of Nelson, Reid & Co., the large locomotive builders of Glasgow, Scotland, was in Montreal last week soliciting orders. He has been successful in getting one from the Canadian Pacific for 20 engines, making a total order of 40 engines for this company. He also expects to receive an order from the G.T.R.

The Waterous Engine Works, Brantford, Ont., have just completed a 1,200-gallon engine, the largest yet built by them, for Montreal. The boiler has been finished without the lagging, a new device in the construction of engines, which enables the easy detection of leaks and the remedying of them without trouble. A second engine is now being built for Montreal.

WINNIPEG WANTS MACHINERY.

C. J. Brown, city clerk of Winnipeg, is calling for tenders before February 17 for one No. 7½ Gyratory crusher, together with belting, pulleys, couplings, etc.; also one simplex-automatic engine, one boiler, duplex feed pump, two horizontal tubular boilers, with smokestack and smokebox, Tenders will be received at the office of the undersigned up to 8.30 p.m.

All machinery is to be delivered f. o. b. Winnipeg, and each tender must be accompanied by a full set of specifications and blue prints, showing setting of engine boilers and smokestack. Tenders may be for the whole or part of the above-mentioned machinery. Full information may be had from the manager, City Quarry, Winnipeg.

DEVICE TO PREVENT COLLISIONS.

A PATENT has just been issued to E. Peterson, St. Hilaire, Que., for a device which is to act as a pneumonic to train despatchers and telegraph operators.

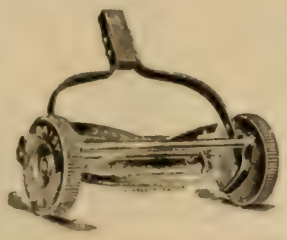
It is claimed that most of the railway accidents, especially those of recent occurrence, have been due to errors on the part of these officials. One explanation that has been advanced is that they are now burdened with too many duties. The majority of them are obliged to act as station agent, ticket agent, switchman, baggageman and at the same time keep their ears open for the ticker. With so many details the operator is liable to forget an order and allow a train to pass unnoticed and without the order intended for it.

Mr. Peterson's device consists of a convenient box or receptacle for train-order blanks, placed immediately behind a semaphore or signal-board lever which virtually locks its contents (the order blanks) till the lever is raised from across it, this process puts the semaphore or signal-board at "danger," thus preventing an operator accepting train orders for delivery before it is so set. Should an attempt be made to lower the semaphore or signalboard lever before the object of the extracted order blank has been accomplished and the blank returned to the box, the operator is warned by an electric bell. The bell also rings should the semaphore or signalboard fail to properly respond to the lever. The device is in operation on the Grand Trunk at St. Hilaire.

OUR LEADERS

The Woodyatt has been well tried, and is being made this season HIGH GRADE to maintain its enviable reputation.

The Star, an extremely popular, medium-priced mower, made throughout of good material.



The Daisy, a well-made, easy-running, low-priced mower for people with small lawns or slim purses.

A "BULLISH" VIEW ON COPPER.

AN old time copper man, one who has been identified with the industry even prior to the Secretan syndicate, in an interview with The Montreal Gazette, says:

"I have recently returned from New York where I have been in conference with some of the largest copper producers and copper consumers in the country. I have also been in touch with a gentleman who was permitted, through the courtesy of Mr. Broughton, the son-in-law of H. H. Rogers, to go through the Perth Amboy works, where a year ago the Amalgamated people had accumulated a vast stock of copper. He tells me there is not a pound of surplus copper at these works to-day.

"I am convinced by reason of my investigations into the real status of the copper situation that we are on the eve of a big upward movement in the price of copper and copper shares.

"Mr. Chas. F. Brooker, the Connecticut brass manufacturer, who consumes yearly 100,000,000 lbs. of copper, tells me that he is running on a hand-to-mouth basis, and has practically no working supply on hand. I believe his position reflects the position of other large consumers.

"In the old Secretan days, and I may say incidentally that I was present at the bankers' conference when efforts were being made to dispose of the vast surplus stock then existing without further demoralizing the market, I was a buyer of the metal as a speculation at 8⅜c. per lb. I made more money in this little speculation commensurate with the funds invested than I ever made before or since. At that conference I, the youngest man present, was called upon to express my views of the situation. I apologized for my youthfulness and inexperience, but stated that I believed the increasing electrical developments and new uses for copper would within a very few years so increase the consumptive demand as to put copper to above 10 and even 11c. per lb. The situation was so dark at that time, however, that even 9c. looked like a very satisfactory figure.

"I am just as firmly convinced to-day that we will see much higher prices for copper in 1903 as I was at that time that we should quickly recover from the 8½c. level.

"It is a mistake to say that the Amalgamated people were, several months ago, depressing the market for any other purpose than simply that of selling copper. They have got all they want of storing supplies of the metal.

"It may not be amiss to state what I know to be the facts regarding the determination of the Amalgamated people two years ago against the strenuous opposition of the late Leonard Lewisohn to maintain a 17c. market. It is generally conceded that Leonard Lewisohn was the brainiest copper merchant the industry has ever known. He told Messrs. Rogers, Rockefeller, Broughton, et al., new men in the business, that they were acting like children in their mad policy of attempting to hold the price of copper at 17c. 'They got mad with me,' said Mr. Lewisohn, but before very long saw the error of their ways. After they had accumulated 250,000,000 lb., they were determined to unload in a hurry and put the price to 10c., if necessary, but I again urged them not to go below 12c., as the world would take all and more at this figure. But no, the new men in the business would have their way, and the result is that they sold their 250,000,000 lb. of accumulated copper, and 150,000,000 lb. more at an average of 11c. They were compelled to keep the price at a low level for some time in order to cover the sale of the 150,000,000 lb. which they did not own.'

"The consumption of copper to-day is enormous, and a smaller stock of visible and invisible supplies exists in proportion to the consumption than was ever before known in the history of the metal."

MONTREAL ROLLING MILLS ANNUAL.

The staff and employes of The Montreal Rolling Mills Co. held their third annual dinner on Saturday night, February 7, in the Place Viger Hotel. The affair was one of the most enjoyable of any yet held, and included a large number of guests.

Speeches, songs and recitations enlivened the evening. The toast list brought out several entertaining speeches. To "Our Guests," proposed by J. L. Waldie, secretary, three happy replies were heard from A. Morris, F. S. Hickey and J. Dougherty. J. R. Kinghorn, sales manager, proposed "Our Chief," and Wm. McMaster, vice-president and general manager of the company replied. "Our Works" was proposed by W. E. Fessenden, and responded to by the general superintendent, M. F. Derrick.

Musical and literary selections were given by F. S. Hickey, J. G. Poole, J. Dougherty, W. R. Boyd, J. Meyers, H. T. Diplock, E. Osborne and F. Singer. The last musical selection of the evening was a chorus by the entire company entitled "God Save the King."

COMMUNICATION WITH P.E.I.

BUSINESS men can scarcely look on with unconcern while communication between Prince Edward Island and the main land is, for days at a time during the winter, wholly cut off.

When, day after day, neither mails nor merchandise can be transhipped either to or from the Island, it is time that ways and means were seriously considered for overcoming the difficulty.

When Prince Edward Island was taken into the Dominion it was with the distinct understanding that the Federal Government should provide means for maintaining communication between the Island and the main land the year around. This it has not succeeded in doing. We are reminded of this year after year.

Something certainly should be done. For its size there is no part of the Dominion richer in agricultural possibilities than Prince Edward Island. It is a veritable garden. But its possibilities are necessarily curtailed by the lack of regular and permanent means of communication with the rest of the Dominion during the winter months.

What is best to be done in the premises we are not prepared to say. A tunnel would be a costly undertaking, but if a tunnel is the only remedy for the unsatisfactory state of affairs which is being experienced year after year, then the sooner we set our face to the task of building it the better. In the meantime the Dominion Parliament should carefully consider the matter, and obtain advice from competent engineers.

With proper communication with the main land, Prince Edward Island would become a more valuable asset of the Dominion.

THE BINDER TWINE TARIFF.

A DEPUTATION, representing eleven factories, waited upon the Minister of Customs on Wednesday, February 11, asking for the imposition of a duty of 12½ per cent. on binder twine. It will be remembered that in the tariff revision of 1897, binder twine was put upon the free list, the change going into effect on January 1, 1898. Thus, for over five years the manufacturers of binder twine have been without any protection whatever. The duty prior to this was 12½ per cent.

At the time binder twine and barb wire were put upon the free list, we protested that it was unfair to single out these two industries for a free trade experiment. If it was decided to introduce free trade, it should have been applied to all industries alike and not these two singled out. The barb wire industry has certainly been killed in this country as a result. And while the binder twine industry has not suffered a similar fate, it has had an extremely hard time of it.

The year that binder twine was put upon the free list, the importation of that article was valued at less than $500,000, while, during the fiscal year 1902, the imports were $1,507,311.

It is estimated that 75 per cent. of the binder twine used in Canada now comes from factories in the United States. It is true that when binder twine was put upon the free list, the raw material, which enters into the manufacture of the same, was also put upon the free list; but the manufacturers claim that this is of no value to them, as undressed hemp has always been admitted free in Canada. But the mere fact that there is no protection on binder twine is not the only difficulty encountered by the manufacturers in Canada. As our readers are well aware, most of the fibre from which our binder twine is manufactured comes from Manilla, on which there is an export duty of about ½c. per lb. This tax does not come upon the United States manufacturers at all, as Congress, about 11 months ago, passed a law authorizing the refunding of this ½c. per lb. to the home manufacturers importing manilla fibre. This means that on the raw material they have an advantage of ½c. per lb. over the manufacturers in Canada. Besides this, they have a protection of 45 per cent. under the tariff, which Canada has not. Therefore, it is practically impossible for the latter to export their surplus to the United States.

When binder twine was first made in Canada there was a protection of 25 per cent., and, under the circumstances, we feel justified in urging the Government to restore the rate of duties existing prior to 1898, namely, 12½ per cent.

COURTESY IN BUSINESS.

WHAT is more pleasant than to meet a courteous business man, one who is the gentleman in season and out of season? Who is more popular than the man who is considerate of the rights and feelings of others at all times?

Yet, how many one meets in a day who are lacking in the fundamental characteristic of the gentleman, viz., courtesy. There is the merchant who is always "too busy" to say even a friendly word to the traveller, employe or customer who wants to have five minutes' conversation with him; there is the traveller who so lightly regards the rights of others that, without even an apology, he breaks in on a conversation to rush through "his little say" to the merchant he desires to reach. There is the customer who is bound to be served the moment he or she enters the store, regardless of those ahead, and there is the boor who has not much "on his hands," and who spends sometimes hours in useless talk.

Examine yourself. Are you as courteous, as considerate as you might be? If not, it is time to start along new lines, for courtesy, like charity, "never fails." It is one of the most valuable qualities that any business man, whether clerk or employer, can possess. Are you losing business or friends by discourteous treatment? If so, you can easily stop the loss in future, for it is easy to be obliging and pleasant when one desires to.

VULGAR COMMERCIALISM.

THE Toronto Globe has come to the aid of the Toronto University. Besides printing a copy of President Loudon's letter, which appeared in last week's issue of HARDWARE AND METAL, it comes out with an editorial which exhibits quite a little temper. Among other things our contemporary says :

> Such criticisms are made, not by this writer alone, but by others whose ideal of a university is an overgrown, third-rate commerciai college. They care for nothing in education but what in their intellectual blindness they call "practical"; not knowing that what they call practical education is the merest vanity unless solidly based on a broad and genuine culture. They scorn philosophy and count the study of literature useless, and they care nothing for languages except in so far as a smattering of them may be useful for commercial purposes. Their interest in the sciences is not for the sake of scientific culture, but only that they may have the "offer of a place." To make a living is their aim, and unless a university, in the easiest and vulgarest way, helps them to that low aim, they count it of no avail.

It is evident The Globe is not clear in regard to the position taken by HARDWARE AND METAL. We have no desire to make Toronto University a commercial college, even of first-rate, let alone third-rate, calibre. "Broad and genuine culture" we would not for one moment depreciate. On the contrary, we recognize that it is all too scarce a quality these days. Culture is defined by Webster as "enlightenment and discipline acquired by mental training."

But the more useful and practical this mental training makes those who are subject to it the better. The word "practical" appears to be offensive to The Globe. But we cannot understand why it should. That which is practical is "capable of being turned to use or account," or as another definition puts it, is "being ready to apply knowledge to some useful end."

All we ask is that the studies in Toronto University be made more attractive to those whose aim in life is not law, medicine, dentistry, music, or the church. Surely no sensible and unprejudiced man would hold that while there is no transgression of the principles of culture when a young man enters the university to prepare himself for law, or medicine, or the church, the aim is "low" and the way "vulgar," when he enters its precincts to prepare himself for commerce or agriculture.

Ninety-nine out of every one hundred men who enter the University of Toronto, or any other university for that matter, have some aim in life. Those who, perchance, have not are scarcely the material from which successful men are made, either for the professions or any other vocation. Those students who have an aim in life naturally make choice of those subjects in the university curriculum which are deemed most helpful in preparing them for their future career. They should be commended, not blamed, for this.

Our contention is that the young man whose aim in life is other than one of the professions should be given the same opportunities in the university as he who has a professional career as his goal. Because we demand this for the University of Toronto, and urge that the Senate be made more representative in its character in order that this end may be obtained, President Loudon demurs, and The Toronto Globe waxes indignant, and that in the face of its own editorial statement that "the University of Toronto is not what its best friends would like to see it."

We fear that those who are displeased with the movement for remodelling the Senate of the University of Toronto with the object of making it more representative, is born of the old aristocratic idea that those engaged "in trade" were an inferior class.

But just as the admission of the burgesses to the Parliament of 1295, completed the fabric of the British representative constitution, so, in time, when more modern ideas obtain, may we expect to see the fabric of the Senate of Toronto University more representative of the industrial life of the Province and the curriculum broader in its provisions.

"Our universities," said Samuel Johnson, are impoverished of learning by the penury of their provisions." And this in a sense can also be said of Toronto University.

LOOKING AHEAD.

THE unusual demand at this season of the year for bicycle sundries leads one to think that there are a great many men amusing themselves at home these winter evenings cleaning and overhauling their wheels, intent on being in the swim when the season opens up. No doubt they have caught the general feeling that the revival of wheeling as a pastime will be very much in evidence this year.

The bicycle is here to stay, and with its cushion frame has reached perfection. It must be acknowledged that the wheel is of relative value as a means of transportation to either our railways or the horse. At the same time, we must admit that we cannot do without the horse, and the same applies to the bicycle. Although we have several new methods of locomotion, the horse will always be with us and the bicycle will keep it company.

As an evidence for the demand of bicycle hardward, we would instance the fact that it has been found necessary to build a large addition to the factory of the largest firm of bicycle and accessories manufacturers in Canada for the growing trade of this branch of the business. This should inspire confidence with the hardwaremen to stock an assorted line of bicycle sundries early, as there is no douht from now on there will be a steady and growing demand for them. This business should not be turned away and allowed to drift into the hands of irresponsible dealers.

A STEP TOWARDS A SETTLEMENT.

WITH the ratification on the Alaskan agreement by the United States Senate another step has been taken toward what is to be hoped will be a settlement of a long-standing boundary dispute between Canada and the United States.

The action of the Senate in ratlfying the agreement was rather unexpected, in view of the outspoken statements of some of the senators who are opposed to it. When the matter came before the Senate in an executive session on Wednesday, the opposition was very slight indeed, and the resolution ratifying the agreement was adopted without even the yeas and nays being called. It is possible that the influence of the President has been at work.

Although the last obstacle, or what is practically the last obstacle, in the way of the appointment of the jurists who will consider the boundary question has been removed, we must not build too much hope upon the question being finally settled by them, for it must be remembered that there are on each side three jurists, and, as no provision is made for an arbitrator, should these be unable to come to a decision, a deadlock will ensue and the question will still be the subject for further negotiations.

In view of this, it is most important for both countries interested that the jurists appointed by each shall be men not only thoroughly competent to deal with the question, but men of an open mind.

INDUSTRIAL GOSSIP

THE Canadian Northern Railway have orders placed for 1,000 freight cars. They are also having 29 engines built at Kingston.

W. F. Farrell will erect a new sawmill at Vancouver.

The Kingston Locomotive Works will import 75 more machinists from Germany.

A new sawmill is to be erected by Messrs. Ludgate, of Vancouver, at Arrowhead, B.C.

About 60 miles of the Temiscaming Railway are under construction, 2,000 men being employed in the work.

D. D. Mann stated in Halifax last week that the construction of the South Shore line in Nova Scotia would be started in March.

A railway 8½ miles long, from Preston to Berlin, Ont., was opened last week. The electrical equipment is not yet quite complete.

It is rumored in Eastern Ontario that Beach, the Winchester stove manufacturer, may move his foundry to Brockville in order to obtain better shipping facilities.

The Kawartha Lake Navigation Co., of Lindsay, have been incorporated with $50,000 capital. Provisional directors are: John Carew, Joseph B. Parkin and T. H. Hamilton.

The Point Edward Elevator Co. have been incorporated with $200,000 capital. Provisional directors are: Thomas Long, J. J. Long, D. S. Laiser, J. K. Hooper and H. F. Moyers.

The Toronto Iron Moulders' Union have decided to ask for a reduction of an hour in their day's work, making a nine hour day, and that the present rate of wages $2.75 per day be continued.

The by-law submitted to Guelph citizens in favor of taking $25,000 stock in the electric road to Hespeler, carried by 486. A lady 87 years of age was one of those who voted for it. The legality of the by-law will now be tested.

The Eastern Canada Coal Co., of Toronto, have been incorporated with $2,000,000 capital. The provisional directors are: H. J. Wright, John Payne, Richard Credicott, W. J. Gilchrist and Henry Townbee.

Notice is given from Toronto that the Mexican Light and Power Co. will apply to the Parliament of Canada for an Act authorizing the company to acquire and operate railways, tramways, telegraph and telephone lines to utilize a concession in Mexico.

The contract for the construction of a railway from Halifax or Dartmouth, N.S., to the Strait of Canso, via St. Mary's and Guysboro has been signed, and as soon as it is ratified by the Nova Scotia Legislature the construction work will be started.

The C.P.R. has promised to take the first year's output in the way of locomotives of The Canada Foundry Co. at that company's new works at Toronto. The company will start in to develop a permanent business in locomotive buildings as soon as their works are completed.

Moose Mountain, Limited, have been incorported with $100,000 capital stock, with object of handling the Hutton Township iron deposit, the directors being Chas. S. Osborn and Otto Fowle, Sault ste. Marie, Mich., and John McKay, W. H. Hearst, and Jas. L. Darling, Sault Ste. Marie, Ont.

Graham Fraser, of The Nova Scotia Steel and Coal Co., predicts that the output of coal at Sydney Mines next year will be between 4,000 and 5,000 tons, that the coke ovens now in course of construction at the former place would be in operation next July and that the new blast furnace would be ready in the autumn.

Among the companies incorporated in Ontario last week were: The Belleville Packing Co., meat packers, $50,000; James Jolley & Sons, Hamilton, saddlery, $100,000; Barton Building Co., Hamilton, $40,000; St. Mary's River Navigation Co., Sault Ste. Marie, $40,000; Midland Coal Dock Co., $50,000; Renfrew Nurseries Co., Renfrew, $40,000.

A new foundry building is to be erected to the plant of the Niagara Falls (Ont.) Machine and Foundry Co. The building will be 100x60 ft., and the town has granted a nine year lease of the land on which the building will be erected to the company. The rapidly increasing business of the Machine Company makes the enlargement of their plant necessary.

Capt. G. L. Cates is constructing a marine railway in Vancouver capable of docking vessels up to 400 tons. Most of the machinery and ironwork has been bought. The power necessary to operate the cradle will be electricity. A 60-horse-power motor will be installed at the head of the ways. This motor will furnish power to a large drum capable of winding on 500 ft. of steel cable per minute under the power mentioned.

Application will be made at the next session of the Manitoba Legislature for the incorporation of a company to build and operate a steam railway from Winnipeg to St. Agathe, Man., of the Manitoba Constructive Co., Winnipeg, whose object is to carry on business as building contractors; to The Dominion Oxygen Light Co., Limited, who propose to supply lighting by means of a new invention in carbureters, and to the Hartney, Man., Farmers' Elevator Co.

BUSY BRANTFORD

An industrial boom is anticipated in Brantford, Ont., this summer. The Cockshutt Plow Co. and The Malleable Iron Works are being rapidly constructed. The Wm. Buck Stove Co. will erect a new enlarged plant in the spring. The Wm. Paterson & Son Co. will erect a large addition to their plant. All this means the employment of hundreds of new men and added activity in building circles.

MILLS BURNED AT HAMPTON

The Elewelling Co.'s mills at Hampton Village, N.B., were destroyed by fire on Friday last. The saw mill, grist mill, box factory, shingle mill, dry house and all their contents, except, perhaps, the boilers, which were full of water, are a total loss, covered by $25,000 insurance. The actual loss is unknown, but many times that. About 150 hands are thrown out of employment, and, unless the mill is rebuilt at once, Hampton will become a deserted village; in any event, there will be much suffering.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, February 13, 1903.

HARDWARE.

THE hardware trade is being rushed at present and nearly all the wholesale houses are working their men at nights in order to keep up with the demand. Winchester rifles have advanced and the list price on Model 1895 is now $30 instead of $25. The price of German Holland chains for spring and summer deliveries is somewhat lower. The list price for lanterns for next season is out, and the prices will remain the same as we have been quoting. Building paper has declined and is now sold at the same prices as quoted previous to last week's advance, namely. Dry sheathing, 35c. and tarred sheathing, 45c. The market for horse nails is very unsettled, and although there is a discount price to be had on nearly every brand, they are all subject to change without notice. A few inquiries have been received this week for cement, but the market does not really open until about the middle of March.

LAWN MOWERS.—There is a bright outlook for lawn mowers, and already a good trade is doing. Our quotations are as follows: 10½ in. wheel x 12 in. cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—The market is steady and a fair trade is doing. We quote: $2.80 per 100 lb. f.o.b. Montreal; $2.15 f.o.b. Cleveland, in carlots of 15 tons; $2.67½ f.o.b. Cleveland, in smaller lots.

GALVANIZED WIRE.—Little business is being transacted in galvanized wire, and prices remain unchanged. We quote as follows: No. 5, $3.70; Nos. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—This market is without change and business is quiet. We quote: Bright and annealed, $2.50 per 100 lb. f. o. b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE WIRE.—Several inquiries have been received during the week for fine wire. The discount is still 25 per cent., with the following extras: 1 and 2 lb. hanks, 25c. per 100 lb.; ½ lb. hanks, 37½c. and ¼ lb. hanks, 50c.

BRASS AND COPPER WIRE.—Trade is quiet and the discount remains at 62½ per cent.

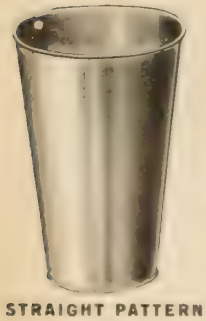
FENCE STAPLES.—The market is firm and a good trade is reported. The prices are as follows: $3 per 100-lb. keg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

WIRE NAILS.—A good movement is reported in wire nails. Our quotations are now as follows: Carlots, $2.40 and small lots, $2.45 per keg f.o.b., Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

CUT NAILS.—There is a brisk demand for spring delivery, with the prices firm. In carlots, the price is $2.40 and in small lots, $2.45 per keg.

HORSE NAILS.—The market is quite unsettled and is inclined to advance. We

SAP PAILS and SPILES

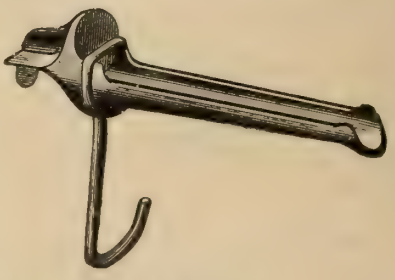


STRAIGHT PATTERN

FLARING PATTERN

These goods will be needed before long, and your customers may ask for them any time now.

If you require either spiles or pails, we can ship you any quantity the same day the order reaches us.



Sap Pails

Made in six sizes in both straight and flaring patterns.

"Eureka" Cast Iron Sap Spiles

The superiority of these spiles over all others is well known to the trade.

Tinned and Galvanized Iron, in the following sizes and Gauges, for sap pans, always in stock:

Tinned Iron	*Galvanized Iron*

MIDLAND, ONT. Limited

quote "M" brand, "O.K." and "New City" brads 55 per cent.; countersunk heads prices quoted on application. Clipper brand, 40, 10 and 5 per cent. off. "Monarch," 60 per cent. and "Peerless," 50 per cent.

HORSESHOES.—The demand is steady and prices are unchanged. They are as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.45; No. 1 and smaller, $3.60; snow pattern, No. 2 and larger, $3.60; No. 1 and smaller, $3.85; X L. steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.45; No. 1 and smaller, $3.70; feather weight, all sizes, 0 to 4, $5; toe weight, all sizes, 1 to 4, $6.25. Shoes, more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—A few orders are being booked but the market is generally quiet. The discounts follow: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coppers rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5 lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—The demand is slow and prices are steady. Discounts are: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent.; full square carriage bolts, 55 per cent.; machine bolts, 50 and 5 and 10 per cent.; coach screws, 66 2/3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50, 5 and 10 per cent.; T bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3½c. per lb. off list; hexagon nuts, 3½c. per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—The trade is quiet and the prices are unchanged. Our quotations follow: Round head bright, 82½ and 10 per cent.; flat head bright, 87½ and 10 per cent.; brass, round heads, 75 and 10 per cent.; brass, flat heads, 80 and 10 per cent.

CORDAGE.—There is a fair trade doing in rope. Our quotations are as follows: Pure manila, 14c.; British pure manila, 12c.; sisal, 11c.; double lathyarn, 11c.; single lathyarn, 10½c.

BUILDING PAPER.—The prices in building paper have declined 5c. during the past week. Tarred felt, $1.75 per 100 lb.; 2 ply, ready roofing, 90c. per roll, 3 ply, $1.15 per roll, carpet felt, $2.25 per 100 lb., dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 55 per roll; tarred fibre, 60c. per roll. O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60 per roll.

SCREEN WIRE CLOTH.—A brisk demand is reported and the demand is firm. We quote $1.10 per 100 square feet.

FIREBRICKS.—There is no change in the market for firebricks. We quote as follows: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—A few inquiries have been received, but as yet the spring trade is quiet. Quotations are as follows: Canadian cement, $1.90 to $2.25; German, $2.20 to $2.30; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel ex store, and American, $2.10 to $2.20 ex cars.

SNOW SHOVELS.—Business is about over for snow shovels with the exception

OPEN HEARTH STEEL

of a few small orders. Prices are as follows: "Habitant," $2.25 to $2.40; "Victor," 10 per cent off; steel railroad shovels, 18 and 5 per cent off.

FIRE SHOVELS.—There is a fair trade doing and the discounts are: No. 70, 38½ to 40c. per dozen; No. 55, 55 to 60c.; No. 57, 82½ to 90c.; No. 60, 82½ to 90c.; No. 65, $1.37½ to $1.45; No. 80, 50 to 55c.; "Duplex," No. 7, $1.21; No. 9, $1.52; No. 11, $1.82.

COAL HODS.—The market is quiet. We quote: Japanned, 16 in., $4.50 per doz.; 17 in., $4.80; 18 in., $5.10; with gold band, 17-in., $5.10; 18-in., $5.40. Galvanized, 16-in., $6.20; 17-in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

LANTERNS.—There is a small trade doing in lanterns, and the prices are firm. We quote: Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7 per doz.; dashboard, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper-plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

METALS.

There is every indication that the spring trade in metals will be quite up to that of last year. Pig iron on spot is not plentiful, and foundrymen in various sections of the country are somewhat embarrased in their operations by the lack of supplies. On a fair-sized lot of ordinary $21 net terms was paid. Pig lead is very firm and an advance is likely to take place in the near future. Sheet copper is also firm and prices may go up. Brokers report a big demand for boom chain and chain generally, while the prices are steady and no advance is looked for. The cause for this brisk demand is the opening of the lumber business. There is no special feature to mention in connection with the foreign markets, other than that Canada plates are 1s. 3d. lower per ton and the market is easier than it was a week ago.

BAR IRON.—The market is steady. We quote: Merchants' bar, $2; horseshoe iron, $2.25; forged iron, $2.30.

BLACK SHEETS.—The demand continues good and the prices firm. We quote: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 24 gauge, $2.50; 8 to 20 gauge, $2.50

GALVANIZED IRON.—There is not much doing in galvanized iron at present. We quote: No. 28, Queen's Head, $4.40; Apollo, 10¾-oz., $4.30; Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand $4.05. For less than case lots 25c. extra is charged.

LEAD PIPE.—Business is good and the market is steady. Composition and waste are quoted at 8c. and ordinary at 7c. The discount is 37½ per cent.

IRON PIPE.—A steady demand for spring delivery is reported. Quotations follow: Standard pipe, per 100 feet, in lengths under 19 feet: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1-in., $5.20; 1¼, $7.35; 1½, $8.95; 2 in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.45; ½, $3.85; ¾, $5; 1-in., $7.20; 1¼, $10.05; 1½, $12.20; 2-inch, $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, ½, $4.20; ¾, $5.25; 1-in., $7.55; 1¼, $10.55; 1½, $12.75; 2-in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1-in., $9.55; 1¼, $13.25; 1½, $16; 2-in., $21.90. For threads and couplings, 5 per cent. is added. Trade discount, 5 to 7½ per cent.

TINPLATES.—The local market is firm We quote: Cokes, $4.25 to $4.50 and charcoals, $4.75 to $5.

SOIL PIPE AND FITTINGS.—A few spring orders were received during the past week. The discounts follow: Light soil pipe, 3 to 6 inch, 50 per cent.; medium and extra heavy soil pipe, 2 to 6 inch, 60 per cent.; extra heavy soil pipe, 8 inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.: extra heavy fittings, 8 inch, 45 per cent.

PIG IRON.—There is a rumor of an advance in prices in the near future. We quote $23.50 to $24.50 ex store, Montreal.

INGOT COPPER. The ingot copper market is very firm and the present prices are $13.50 to $14.50 per 100 lb.

INGOT TIN. The market is very firm We quote $32 to $32.50 per 100 lb.

PIG LEAD. We quote: Carlots, $3.15 and less than carlots, $3.25.

STEEL. The demand is steady and the market very firm. We quote: Mild, $2.05; sleighshoe, $2.10 to $2.20; tire, $2.15 to $2.25; spring, $2.85 to $3; reeled machinery, $2.75 to $3; toecalk, $2.60 to $2.75; machinery (iron finish), $2.10; mild steel, $2.05; sqdare harrow, $2.15.

TOOL STEEL. There is a steady demand for tool steel at the following prices: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c per lb.

CANADA PLATES. Locally, a fair trade is doing Quotations are: 52s, $2.60 to $2.70, 60s, $2.70 to $2.80; 75s, $2.80 to $2.85, full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.45 to $4.55.

TERNE PLATES.—The market continues very firm. We quote $7.50.

COIL CHAIN. The demand for chain is brisk and the prices steady. We quote: No 6, 11½c.; No. 5, 10 to 10½c.; No. 4, 9 to 9½c.; No 3, 8 to 8½c; ¼ in., 6½ to 7c per lb; 5-16, $5 to $5.20; 5-16 exact, $5.25; ⅜, $4.25; 7-16, $4; ½, $3.95 to $4.05; 9-16, $3.85 to $3.95; ⅝, $3.65 to $3.75, ¾, $5 to $5.20; ⅞, $3.30; 1 in., $3.15 to $3.25. In carlots an allowance of 10c is made.

SHEET ZINC.—There is not a great deal of business doing in sheet zinc We quote from $5.75 to $6.

ZINC SPELTER. A small movement is reported. We quote $5.25.

SOLDER. Prices remain unchanged and a fair trade is doing. We quote: Bar solder, 20c and wire solder, 18c.

SCRAP METALS

Business in scrap metal is brisk and the market is firm. Copper has shown a slight advance and is strengthening every week. This is the dull season with the small dealers as regards shipments. Our quotations are as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c., light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $15 to $16; No. 2, $7 per ton; machinery scrap, $16.50 to $17; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6½ to 6¾c. per pound.

HIDES.

The buyers have sufficient competition to keep prices steady, and tanners are purchasing in fairly large lots. We quote as follows: No. 1 hides, 8c; No. 2, 7c, No. 3, 6c. Calfskins, 8 to 10c and lambskins, 75c.

RAW FURS.

This market has continued unchanged since our last report. Offerings are fairly good. Dealers are looking forward to the March fur sales to change prices on this market. We quote:

MONTREAL NOTES.

An advance is looked for in sheet copper

Building paper advanced last week and is back to the old prices again

Canada plates have declined a little this week on the English market.

The Handsome Effect of Our Sheet Metal Fronts

Makes them wonderfully popular, either for new buildings or improving shabby exteriors.

We make them complete, including Cornices, Door and Window Caps, etc.—a most durable, economical, finish, giving fireproof protection, as well as fine appearance.

We can supply you with all kinds of building requisites in Sheet Metal—trustworthy goods of the highest grade.

The Metallic Roofing Co., Limited

TORONTO WINNIPEG MONTREAL

ONTARIO MARKETS

Toronto, February 13, 1903

HARDWARE.

SHIPMENTS continue to be principally on account of orders from the Northwest, and are of a general sorting nature, though there is a particularly good demand for tools and builders' hardware. There is a good sorting demand from nearer points for immediate delivery of churns, washing machines, harvest tools, etc. Repeat orders are coming in liberally for cross-cut saws and axes, while a good sale of chains for lumbering purposes is reported. The discount on horse nails is now 5c. lower

THE MARKETS

than last week. The advance of 5c. in tarred building paper, made last week by manufacturers, has been withdrawn as a result of pressure from jobbers, who had sold ahead without covering themselves by placing orders with the makers. It is claimed that as soon as these difficulties are cleared up the advance will be again made. Everything considered, business is in a steady, satisfactory condition.

BARB WIRE.—Orders continue to come in fairly well. The base price is quoted as follows: $2.55 from Cleveland, and 10c. less in carlots. From stock, Toronto, $2.80.

COILED SPRING WIRE.—The demand for this line has been a feature of the season. Quotations are as follows: No. 9, $2.75; No. 11, $3.40; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlots of 15 tons, 5c. less, with freight up to 20c. allowed.

GALVANIZED WIRE.—A few orders still arrive. Prices are steady, and are as follows: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE.—The demand for oiled and annealed wire has not been up to the usual this season. It is believed that farmers are erecting more all-wire fences than formerly and less rail fences, which calls for much of the oiled and annealed wire sold. We quote the base price as follows: $2.50 per 100 lb. Oiling, 10c.; coppering, 60c. and tinning, $2 per 100 lb extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—There is a moderate demand. Prices are steady. We quote as follows: $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS.—Prices are well maintained, but there is nothing doing. We quote $2.50 per keg.

HORSE NAILS.—Discounts have been reduced 5 per cent. on "Monarch," "Countersunk" and "Peerless" brands. The demand is small. Prices on "M" brand have been withdrawn. Prices are unchanged. Discounts are: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "Monarch," 60 per cent. and "Countersunk" head, 60 per cent.; "Peerless," 45 and 7½ per cent.

HORSESHOES.—Trade is within small compass. Prices are steady, as follows: Iron shoes, No. 2 and larger, light medium and heavy, $3.45; snow shoes, $3.70; light steel shoes, $3.55; featherweight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—The demand is about as usual at this season. Quotations are as follows: Flat head bright, 87½ and 10 per cent. discount; round head bright, 82½ and 10 per cent.; flat head brass, 80 and 10 per cent.; round head brass, 75 and 10 per cent.; round head bronze, 65 per cent. and flat head bronze, 70 per cent.

RIVETS AND BURRS.—A fairly active demand is noted this week. Quotations are as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—Business is just about the same as usual at this season. No change in the situation nor prices. Our quotations are as follows: Carriage bolts, common ($1 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—Orders are generous, but shipments are not yet heavy. Prices are unchanged. The discount is 45 per cent. and the list price has been reduced $3 per dozen for Olds' good, $2 for Gray's and $1 for Burns'.

ROPE.—Orders are of a small nature. We quote: Pure manila, 14c.; British manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3-cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—A good trade is now reported. No change in discounts is noted, they continuing at 60 and 10 per cent.

LAWN MOWERS.—The activity continues. Prices are firm. Quotations follow: Woodyatt, 12-inch wheels, $7.50; Star, 12-inch wheels, $5.50; Daisy, 12-inch wheels, $4.90; Philadelphia, 10-inch wheels, $6; Ontario, 10-inch wheels, $12.75. The other prices are in proportion.

BUILDING PAPER.—Last week's advance has not been maintained for reasons noted above. We now quote the same as a fortnight ago: Dry sheathing, grey or straw, 40c. per roll; tar sheathing, grey or straw, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll.

RANGE BOILERS.—There is still an active demand. The prices are steady: 18 and 30 gallon, $6; 35 gallon, $7; 40 gallon, $8; 52 gallon, $12.50; 63 gallon, $19; 82 gallon, $23; 100 gallon, $31, and 120 gallon, $37.

STOVES AND RANGES.—Some activity in summer lines is beginning to manifest itself. Prices are unchanged.

BRUSHES.—Manufacturers are arranging an advance. We have not learned the exact amount as we go to press, but understand it is about 10 per cent.

SCREEN DOORS.—A good movement still manifests itself. Quotations follow: Screen doors, common, two or three panel, walnut stained, 4-in. style, $6.80; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3-inch style, 20c. per dozen less.

CEMENT.—Business is picking up nicely and manufacturers expect the demand to be fully up to the supply. We quote as follows: Canadian Portland, $2.40 to $2.50; hydraulic, $1.35 per barrel.

METALS.

Business continues to manifest a healthy spirit, no weakening influences being felt. Iron and steel are particularly firm, some of the jobbers predicting with great assurance that an advance must come. The United States Steel Corporation have withdrawn all quotations, which is taken as an instance of the strength of the market. Scotch iron is offering for spring delivery at unchanged prices. Canadian iron is still being sold months ahead, but quotations are unchanged. Other lines are unaltered, though firm throughout.

PIG IRON.—The strong feeling continues. Prices are as follows: $23 to $25 for No. 1 and $22.50 for No. 2 at the Canadian furnaces. No. 2 Summerlee is quoted at $25 on track, Toronto.

STEEL BOILER PLATES.—We quote $2 per 100 lb. at Pittsburg.

TOOL STEEL.—There is an excellent movement, with prices firm. We quote: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8c. to 9c.; Park's "Silver," 12 to 14c.; Park's Special," 15 to 20c.

MILD STEEL.—Prices continue steady. We quote $1.90 per 100 lb. at Pittsburg and $2.75 per 100 lb. on track, Toronto.

SPRING STEEL.—No change, and we quote $3.50 per 100 lb. on track, Toronto.

BAR IRON.—This line is particularly stiff and a good movement is noted. We quote the base price as follows: $2.05. Extras cut to length while rolling: 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft., by special agreement, according to length and size.

BLACK SHEETS.—Very good shipments are being made from stock. Prices are steady. We quote as follows: Common, $3.15 for 28 gauge and dead flat, $2.50 for 26 gauge.

CANADA PLATES.—A good business continues on import account. We quote: All dull, $2.90 to $3; half-polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—There is a fairly good business both for spot and future shipment. The stock prices keep steady, and we quote as follows: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—A fair business is doing in small lots. Prices are firm at last week's advance. We quote $31 to $32 per 100 lb.

TINPLATES.—An improved demand has been noted. Prices are steady. We quote: Charcoals, $4.75 to $5 and cokes, $4.25 to $4.50 per box.

COPPER.—Ingots continue in good demand. Sheet copper is also active. We quote as follows: Ingot copper, $13 and sheet copper, $22 to $23 per 100 lb.

BRASS.—Unchanged. The discount is 15 per cent.

LEAD.—There is a good movement. The prices are unchanged at $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE.—The demand keeps brisk. Prices steady. We quote per 100 ft.: Black pipe, ⅛-in., $3; ¼-in., $2.30 to $2.40; ⅜-in., $2.65; ½-in., $2.85; ¾-in., $3.65; 1-in., $5.20; 1¼-in., $7.35; 1½-in., $8.95; 2-in., $12.55; 2½-in., $20 to $21; 3-in., $24 to $25; 3½-in., $30 to $32; 4-in., $37.50 to $38.

ZINC SPELTER.—The activity continues. We quote 5 to 6c. per lb.

ZINC SHEETS.—A good demand is noted. We quote the base price as follows: Cask lots, $6 to $6.25 and part casks, $6.25 to $6.50.

SOLDER.—A better inquiry. The prices are steady at 20c. for guaranteed half-and-half, and at 17 to 18½c. for wiping.

ANTIMONY.—Business is in small lots. The price is steady at $9 per ton.

PETROLEUM.

The prices are unchanged. The Union Petroleum Co.'s prices are as follows: Lily White, Canadian, 18c. in bbls; Silver Light, American, 19½c. in bbls; Crystal Spray, water white, American, 21c in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c less.

OLD MATERIAL.

Offerings are now liberal, but prices are maintained. Our quotations are as follows: Heavy copper and wire, 10½c per lb.; light copper, 8 to 8½c.; heavy red brass, 9½c.; heavy yellow brass, 7½ to 8½c; light brass, 5 to 5½c.; lead, 2 to 2¼c.; scrap zinc, 3c.; iron, No. 1 wrought, $13 per net ton; No. 2 wrought, $4.50; machinery cast scrap, $15.50 to $16; stove plate, $10; malleable and steel, $6 to $6.50; old rubbers, 6½c. per lb. and country mixed rags, 50c. per 100 lb.

FOREST CITY GOSSIP

London, February 12, 1903.

THE hardware and the metal trade in the "Forest City" is all right. All branches of manufacturing are on the boom; the steelmen, the brassmen, the ironmen, the tin workers and the wiremen are all working full time again and everything denotes prosperity and a continuation of good times. There are but few lines for which orders have not been in excess of last year at this season. The increased demand for coiled fence wire is worthy of notice. There may not be any marked increase in the price of this commodity, but dealers may rest assured that it will continue firm. The Steel Metal Workers' Union has made an arrangement for the current year with the employers on the question of wages.

* * *

The McClary building, which was partly destroyed by fire just a month ago, has been restored from ashes with so much alacrity, that in spite of inclement and rough weather, the new roof over the burned section will soon be completed.

* * *

W. A. Mason, of Kincardine, has sold out to George Trett, of Bothwell, and accepted a partnership with The London Fence Machine Co., and will go on the road for the firm.

* * *

A final meeting of merchants will be held this week in this city, if possible, to complete organization against dishonest clerks. As a result of recent developments, whereby it became apparent that certain large mercantile establishments were being systematically victimized, some of the merchants are banding together for their own protection, and intend to form what is to be known as The Merchants' Protective Association. The actual work of discovering guilty parties will be entrusted to a capable detective, who will maintain an oversight of all the stores represented in the Association. Not all the merchants, however, are favorable to the plan. As it is the intention of the Association to make their aims and objects as public as possible, we will wait the deliberations of this meeting.

* * *

The town of Chatham, Ont., received $18,000 from Andrew Carnegie for a public library. A Sheldrick was in London last week getting pointers re fitting up the building at Chatham. Looks a pretty library is a credit to Western Ontario and may well be copied.

* * *

G. A. McGillivray & Co., of this city, have sold the Wolf & Rae coal property to Robb & McDonell, of London and Guelph. The price was between $6,000 and $7,000.

* * *

One of the enterprising manufacturing concerns here is The London Fence Machine Co. They sell only to one firm in any place. Everyone of their numerous customers is being sent a well painted advertising sign, notifying the public that they have the agency for The I. F. Machine Company's goods. This firm manufactures machines and apparatus for the erection of wire fences on an improved and labor-saving plan. A visit to their factory, which has a railway switch in the rear, is quite an education to one not versed in handling wire fences. On every hand are the various articles they make on the premises, such as wire grips, wire reels, post hole diggers, pulley stretchers, pliers, spliecrs, etc. They use an immense tonnage of coiled fence wire in connection with their output. This business is rapidly extending, and they claim to be the first Canadian firm in their line who have undertaken a branch business in the United States. They have started in Cleveland and have very bright prospects there.

* * *

A. J. Jeffrey, in the hardware business in Stratford, Ont., has sold out and gone to the employment of Lewis Bros., Montreal.

* * *

The following merchants were in London on business during the past week: Wm. Hugill, Constance; Wm. Smale, Highgate; Robt. Skinner, Ingersoll; I. Stevenson, Crumlin; Wm. Walker, O'Dell P.O.; L. Lambourne, Birr, P. O.; Jas. McKenzie, Union; G. A. Blackwell, Komoka; P. Welsh, Komoka; C. R. Eden, Harrietsville; Joe Glavin, Mt. Carmel; Mrs. Jas. Harding, Thorndale; Mrs. B. McKay, Donfield; Jas. Potts, Dorchester; Chas. H. Lee, Thorndale; Chas. Finkbeiner, Milverton. J. Hern, Elmsville.

* * *

All Western Ontario merchants can leave their names for publication at the London office, 365 Richmond street, Room 1.

W. H. L.

MAY CELEBRATE OPENING OF "SOO."

A movement is on foot to fittingly celebrate, during next June, the fiftieth anniversary of the opening of the ship canal at Sault Ste. Marie, says an exchange. The work of building a canal on the American side begun by the State of Michigan 50 years ago, and the waterway was opened two years later. This was a diminutive affair, in comparison with the canals and locks used at this point at the present time, but it was the establishment of a traffic route which has undergone wonderful development in the time intervening. The traffic through these canals now greatly exceeds that through the Suez canal.

MANITOBA MARKETS.

Winnipeg, February 9, 1903.

THE jobbers are busy entertaining visitors, and all travellers are in off the road. The only changes to note for the week are an advance of 5c. on building paper and a further advance of [illegible] on turpentine, which was expected, and a decline of 5c. in linseed oil, which was also foretold last week. The market is steady in all lines and fairly active.

With the exception of the above changes the price list for the week is the same as previously sent.

We quote as follows :

MANUFACTURERS TO MEET

On Thursday next a large number of Western Ontario manufacturers will meet in Brantford to banquet and to discuss subjects of commercial interest, notably, tariff matters. There will be a meeting of the executive in the afternoon in Toronto, and a special will be run from there for the convenience of those who will attend the banquet. Arrangements have been made to take up 100 gentlemen, and the train will pick up the Hamilton contingent. The arrangements at the Toronto end are being looked after by R. J. Younge, and C. H. Waterous is the chairman of the Brantford committee. The supper promises to be a very interesting one, as the speakers will devote their time to a discussion of matters of general commercial interest.

"Scales" at very low prices. We think you would be interested. Also something special in Linseed Oil, Turpentine and Paris Green. Write us.

CHAT

THE fire which started in E. A. Killmaster's paint and oil storehouse last week destroyed his entire stock. Insurance was $5,500.

Gilpin Bros., Orillia, Ont., will open a hardware store in Collingwood, Ont., within a few weeks.

An injunction has been issued restraining The Bell Telephone Co. from extending its system in Fort William.

J. R Hambly has admitted T. H. Baker into partnership in his hardware business. The new firm, Hambly & Baker, should prove one of the most progressive in their district.

Manufacturers and merchants, farmers and fruit growers, composed a deputation which waited upon the Government and urged the appointment of a railway commission to control and regulate freight and express.

W. A. Mason has sold out his hardware business at Kincardine, Ont., to George Trott, of Bothwell. Mr. Mason has accepted a partnership in the London Fence Machine Co., of London and Cleveland, and will take the road for the company.

The House Committee on Ways and Means, of the United States Congress, recently authorized a Bill to be reported, which provides that no packing of manufactured smoking or chewing tobacco, snuff, cigars or cigarettes shall have anything packed in or attached thereto, other than the manufacturer's wrapper and labels, the internal revenue stamp and the manufactured articles. Further provision is made that nothing shall be affixed or printed upon such packings, promising or offering any gift, prize or premium.

A MISLEADING INTERVIEW.

In an interview with C. L. Lightfoot, manager of The Gurney Foundry Co.'s branch in Vancouver, published two weeks ago, a trio of oversights led to a misleading report.

By making "logs" read "boys" we inferred that British Columbia had refused to allow her sons to be exported. Then, instead of making freight charges into the interior 3c. per lb., it was made to appear $3 per lb.; also, instead of mining in the "Slocan," our report read in the "Slocum," a district we have not yet heard of.

HARDWARE AND METAL is not often caught by such slips, but it seems that "troubles never come singly" to this paper as well as to the world generally.

TORONTO HARDWAREMEN MEET.

The Toronto branch of the hardware section of the Retail Merchants' Association of Canada held their annual meeting last week. The principal matter discussed were the prices on white lead, nails, spades and shovels. Messrs. Rodgers, Cosier and Trowern were appointed a committee to meet a committee representing the jobbers of these lines, to request the adoption of a fixed basis of prices on these goods.

The following officers were elected:

President—E. R. Rodgers.
1st Vice-President—W. C. McFarlane.
2nd Vice-President—G. Pearcall.
Treasurer—J. Cosier.
Secretary—S. G. Greer.

It was decided to have a supper at Webb's on Thursday, February 19, when a full attendance of members is requested.

At the next meeting of the Guelph, Ont., council a by-law to purchase the Guelph Electric Lighting and Power Co. will receive its third reading. There is some opposition to the by-law in the council, though it was carried by the ratepayers.

BUYING SPRING STOCK

The question of Brooms when purchasing Spring Stock is a very important one to every Hardware Merchant. It's best solution is found in buying the best goods.

Boeckh's Brooms

are always thoroughly reliable. Bamboo-Handled Brooms, Hair Brooms, Dustless Brooms, Factory Brooms, Steel Wire Brooms, Stable Brooms, Hearth Brooms, etc.

Send Post Card for our 1903 Illustrated Catalogue if you have not yet received it. . .

HINTS FOR RETAILERS

ORDERS AND ACCOUNTS.

By ONLOOKER

OUR intention to give practical suggestions to storekeepers for the systematic care of their business is evidently finding favor among subscribers. While the storekeepers themselves will be chiefly benefitted, the wholesaler, too, indirectly finds reason for rejoicing, if we are to judge from one or two expressions of their opinion that have reached us. One, such, writes us that nearly half the time and a great deal of its worry could be spared the jobbing house, if their customers were half systematic in their business. "For instance," he says, "orders come in for 'goods same as last,' and dusty files have to be taken down and the time of a clerk spent in going over former orders until the order for this line is found. Of course, the customer does not realize that he is giving this labor. He supposes, probably, that his jobber will recollect his last order, in the same way that he, no doubt, could recollect what kind of a padlock he sold Tom Jones for his stable door ten years ago. He does not realize that the jobber has 4,000 or 5,000 accounts—half of them impersonal, unfortunately—and those accounts averaging, say 100 or 200 orders per day. It is past his conception, too, that all this part of the business may scarcely come under the notice of the principals of a firm, but is handled by a staff of clerks, only one or two of whom may have seen this particular order in question at all."

What a saving to the jobber's staff if Mr. Customer could supply the date, even, on which he purchased the line he wishes duplicated, to say nothing of being able to refer to his own invoice and furnish the number and description. The same trouble as this occurs in returning goods.

Most houses, of course, have a rule to refuse returned goods after a certain number of days. But this rule can't be adhered to in practice always, and it is not infrequent to receive a consignment of odds and ends with no information whatever supplied to identify them with the invoice on which they were charged. They may have been returned to the wrong house, for all the consignor or consignee knows of the matter.

Another, writing from the office view point, says "There is much to be done along the line of simple instructions to storekeepers in the matter of looking after their accounts." He thinks the instructions will have to be very simple in some cases, some storekeepers not having any instinct whatever for books, as a bookkeeper understands them. He thinks it will be wholesome to stir them up in this matter, however, and he adds that there can be no better medium than a trade paper. Naturally, one cannot complain to his customers of these things for diplomatic reasons, and even so, without being able to offer some suggestion (for which, of course, there is no time), such correspondence would be of little value.

This correspondent goes on to relate one incident showing a state of chronic neglect of which we were not prepared to hear. His firm had been bombarding a customer about an overdue account of several hundred dollars for some weeks, without eliciting any reply whatever. It was finally decided to send an auditor to investigate, and the customer was duly found next morning chatting in a neighbor's cooper shop, and when the subject of the account was brought up, experienced great pain and surprise at the existence of such an overdue account. This ignorance, of course, was not credited until a pile of unopened letters was discovered on his desk, the accumulation of weeks—the "dunners" among them, grinning with their harmless threats. The customer had the necessary amount in his pocket in good bank bills and the account was settled forthwith.

Now, we do not want to preach to customers unduly, and we would be very unwilling to break up the social habits of village life and see it afflicted with diseased city nerves. But the industrial army is on the march. Competition will grow keener and keener, and a week point in business exposes the whole to attack. Our advice, then, is to set your (business) house in order to-day that you may do battle to-morrow.

A VISIT FROM MR. WIGGS.

W. H. Wiggs, of The Mechanics' Supply Co., Quebec, has been making a trip to the west the past week, visiting among other places both Montreal and Toronto. Mr. Wiggs reports business good, and the fact that he has been compelled, as pointed out in a recent issue of HARDWARE AND METAL, to greatly enlarge his premises.

CHEAP POWER FOR TORONTO.

ON Monday, W. P. Judson, of Oswego, N.Y., representing the Hamilton and Lake Erie Power Co., presented to a number of Toronto gentlemen the proposition his company have to make regarding the development of cheap power.

His scheme is to divert water from the Welland River (Chippewa Creek) to the Jordan River, an insignificant stream, and thus secure a fall over the height of land which extends around the south shore of Lake Ontario from Queenston and Hamilton.

The Welland River or Chippewa Creek flows into the Niagara a few miles above the Falls, is a sluggish stream. Engineers say that if there were an outlet at its headwaters it would flow west instead of east. The company proposes to provide this outlet by constructing a canal five and one-half miles in length to convey the waters to the brow of the height of land, and conduit them after a fall of 150 ft. to the channel of the Jordon, and thence to Lake Ontario. Such a channel with the whole of Lake Erie behind it would provide a waterfall fully as good as Niagara Falls from an industrial point of view. Without any dredging in the Chippewa, and without any straightening of the river, 100,000 horse-power could easily be developed.

The canal would entail the excavation of 7,000,000 cubic feet of soil Mr. Judson said that to build a transmission line capable of delivering 30,000 horse-power at Toronto would cost $12,000 a mile, and the distance is about 60 miles. This would provide for a double line, the idea being to have two lines not far apart, so that if anything went wrong with one line the whole current would be put on the other, thus obviating any risk of the city being without energy. The $12,000 a mile does not include right of way, but he did not think that the amount required for that purpose would be high. Transformers included, he thought, the cost of transmission will be within $1,000,000.

WINNIPEG BOARD OF TRADE.

THE annual meeting of the Winnipeg Board of Trade was held on Wednesday last, when the following officers were elected: President, G. R. Crowe; vice-president, H. W. Hutchinson; treasurer, Andrew Strang; secretary, C. N. Bell. Mr. Strang and Mr. Bell were re-elected to the positions, which they have occupied for so many years, by acclamation. The council for 1903 will consist of the following sixteen members representing the various interests of the Board: G. F. Carruthers, C. Bartlett, J. H. Ashdown, A. L. Johnson, W. Sanford Evans, F. W. Drewry, J. T. Persse, D. E. Sprague, J. Y. Griffin, D. W. Bole, F. Phillips, W. Georgeson, Wm. Whyte, H. M. Belcher, Jno. Russell, G. F. Bryan.

The report of the council and the president's address covered very fully the work of the past year. Retiring President Russell's address was, in part, as follows:

INDEX OF CITY'S GROWTH.

A fair index of the city's steady and substantial growth is found in the statement of the bank clearings, which, in 1896, were $64,046,438; in 1901, $132,000,000; in 1902, $188,370,003; and this advance was marked by no unusual circumstance, but caused solely by the substantial increase in the value of the products of the country, and the consequent increase of trade.

A comparison of these figures with those of eastern cities may be interesting, the aggregate clearings of 11 other Canadian cities having shown an increase in 1902 over 1901 of 28.12 per cent., while Winnipeg for the same period showed an increase of 40.38. Notwithstanding this remarkable progress, I have no hesitation in predicting a still greater advance for the coming year. The statistical data given in the report of the council will indicate the steady increase in the value of the products of the Province. The cash value of the grain raised in 1902 in Manitoba and the Territories total, approximately, $60,000,000, while the cattle and dairy produce, actually available for export, will add another $2,000,000.

The number of buildings erected in the city according to official returns was 973 with an aggregiate value of $2,365,325. In 1901 the total assessment was $28,305,200, and in 1902, $35,173,870. The amount expended by the exhibition board was over $60,000. These figures, without referring in detail to the general city improvements, are in themselves eloquent.

IMMIGRATION.

The rapid settlement of the West is well evidenced by the great numbers of immigrants continually arriving, the Government immigration statistics indicate that about 80,000 immigrants arrived and settled in Manitoba and the Territories during 1902.

SUGAR BEET GROWTH.

Early in the last year the standing committee on sugar beet growth effected an arrangement with the Manitoba Department of Agriculture whereby sugar beets were grown under direction of the Department at a number of points in Manitoba where varying soils and conditions prevail. Carefully prepared directions were sent to each person entrusted with the cultivation of the beets, and the experimental plots were visited by an official of the Department during the season of growth. Late in September sample beets, taken from these test plots, were forwarded to the chemist of the Dominion Experimental Farm at Ottawa for analysis. A fortnight later, also, a second lot of selected roots were forwarded to Ottawa. It is very satisfactory to know that the chemist reports that, while the roots first forwarded were evidently pulled at too early a date, the analysis of the beets in the sampleslast forwarded gave very satisfactory results; the percentages for different varities of the best being as follows: Percentage of sugar in juice, 13.58 to 20.17; percentage of solids in juice, 18.20 to 23.05; co-efficient of purity, 73.01 to 87.50.

At the request of the Board, the director of the Dominion Experimental Farm at Ottawa is having an analysis made of sugar beets grown on the experimental farms at Brandon and Indian Head, but report thereon is not yet to hand.

ELECTRIC POWER FOR MANUFACTURING.

But a few years ago it was generally accepted as an axiom that Winnipeg would never be a manufacturing city, but experience is proving that as the consuming population of the West increases, many articles can be manufactured, and, as a fact, are now manufactured in this city. I will not attempt here to name in detail the factories and workshops already established, but investigation will prove to any member of this Board, or other person interested, that a wide range of manufactured goods are already produced in the city, and that the list would be largely increased were power available at a less cost than it is at present; and this leads me to comment upon the announced intention of the company now constructing the works for the developing of an electric power from the Winnipeg River, to furnish power in Winnipeg at not more than one-half the present cost. It is most satisfactory to know that these works are being prosecuted with great vigor, and that probably within a year the company will be prepared to deliver electrical power here up to a maximum of 10,000 horse-power, and that they will be prepared to increase this almost indefinitely as occasion requires. In view of this fact, I am well within the mark in saying that there are very bright prospects ahead for the establishment of manufacturing industries in Winnipeg in the not distant future. In connection with this question of the furnishing of cheap electrical power in Winnipeg may be considered the likelihood in the future of lower prices for gas, both for illuminating and heating purposes. The lowering of the prices now charged for electric lighting will have an immediate affect on the prices charged for gas, a state of affairs I am sure we all hope for.

IMPORTANT NOTICE.

I particularly direct your attention to the following extract from Commercial Intelligence of January 22, 1903: "From correspondence and other indications it is perfectly clear that a widespread impression exists that there is still some connection between this newspaper, Commercial Intelligence, and The Commercial Intelligence Bureau, Limited, of 50 Eastcheap, London, E. C. We, therefore, beg our readers to note that no such connection exists.

"Henry Sell, the founder of Commercial Intelligence, also assisted to found the Commercial Intelligence Bureau, Limited, and was at first the chairman of its board of directors. Some time since, however, he withdrew from all connection with the Bureau, and an announcement to this effect was published in the Press at the time."

PERSONAL MENTION.

Mr. C. G. Shepard, pig iron and coke jobber, Buffalo, N.Y., was in Toronto this week.

Mr. Andrew J. Jeffrey, late of Stratford, Ont., has joined the staff of Lewis Bros., Montreal.

STOVES AND TINWARE

AND ALLIED TRADES

CULTIVATING FURNACE TRADE.

A Williamsport, Pa., retail stove and furnace firm has adopted a method of building up a furnace trade which has proved successful with them and should be equally so with Canadian retailers. They have distributed throughout their town and district the following pamphlet:

INTRODUCTION.

For the use of our customers, and for others who have the care of furnace fires, we have prepared this pamphlet. We find that a great deal of misconception exists in the mind of the average servant, regarding the use of the several appliances connected with furnaces. We find, too, a surprising lack of knowledge concerning furnaces in some people who are well educated in other respects. We account for this lack on the supposition that they have not given the subject the thought which it certainly deserves.

Efficiency.—If you pay for fuel you should burn it intelligently, and receive its full value. Our experience with furnaces of the various makes, coupled with a study of the subject assures us, we think with good reason, that "we do speak of that which we do know."

This little pamphlet does not cover the subject, but we have aimed to present a few practical hints in condensed form.

CONCERNING FURNACES.

Air which is impure is a fruitful source of headache and listlessness and general depression. Unless fresh air is introduced into your homes you breathe the same air over and over again. The warm-air furnace provides a convenient means of introducing fresh air at a proper temperature, and at the same time of warming the house.

No two bodies can occupy the same space at the same time. It is evident, therefore, that the entering fresh air drives out or displaces an equal quantity of foul air, which passes out through the various openings. Therefore, all warm air furnaces should be well supplied with air from outside the house.

Theoretically, the pipes and flues should be large enough to change the air in the house four times an hour. For practical purposes, assuming that the warm air pipes leading to the registers are sufficiently large to heat the house easily, three-fourths of the combined capacities of the warm air pipes would be the proper capacity of the cold-air supply or duct. The remaining one-fourth is allowed for the expansion of the air in heating.

Unless the furnace is supplied with fresh air it cannot deliver fresh air. It cannot make air, but simply warms it, and at the same time lifts it up into the house according to well-known natural laws.

Unless air is allowed to pass over, and abstract the heat from the iron and steel of which furnaces are made, they are likely to be overheated and possibly injured.

It is bad practice to place a choke-damper in a cold-air duct, by which it can be entirely closed. A careless servant can injure a good furnace by shutting off the cold-air supply and keeping a hot fire. A simple swing door, instead, with notched lever, will automatically open into the cellar while closing off the outside air supply. This arrangement is self-indicating, showing at a glance the position of the cut-off; and has the further advantage of being inexpensive, and is adapted to cold-air ducts or wood or metal.

There is something radically wrong with the heating system if the galvanized casing of the furnace gets hot enough to discolor it. It is an evidence of insufficient air supply, or insufficient radiating surface, or obstructed hot-air flues.

When the house gets too warm check the fire; do not merely close the registers.

Cover the hot air pipes in the cellar and the air will lose less of its heat in transmission, and the cellar will be much cooler. The saving in coal will pay for the expense of covering.

There should be a good check draft in the rear of every furnace. Checking the fire by opening the feed door should not be allowed, except to rapidly cool an overheated furnace, for the following reason: The average furnace chimney is 70 square inches in area, while the furnace feed door is 150 square inches in area. The chimney is therefore unable to care for all the air entering the furnace through the feed door. The result is that air enters the furnace through the lower two-thirds of the feed door, and a mixture of coal gas and air passes from the furnace to the cellar through the upper one-third of the feed door opening.

The air which enters the combustion chamber from under the grate aids combustion, and is called the bottom draft. The air which enters the chimney without passing through the fuel is called the check draft, and diminsihes the capacity of the chimney to the extent of the check-draft opening.

The draft, or drawing power of a chimney, is caused by a difference of temperature inside and outside of a building, and by induction currents across the top of the chimney. Chimneys, like people, have peculiarities, and should be studied to be understood.

Do not check the furnace too much for the night, as it is hard to heat a cold house quickly. A cold breakfast room is conducive to ill-temper. It takes a brisk fire to warm up a house that is thoroughly cold. It is better economy to keep a house always warm than to have it alternately cold and warm.

To insure warm rooms in the early morning shake the grate until the ashes are bright beneath, and open the bottom draft until the house is warm. Then put on coal, and when well ignited shake the grate again.

When shaking the grate close the bottom hraft and the check draft, and open the direct draft to chimney, so that the fine dust will not fly into the cellar.

Remove the ashes regularly and often; it costs less than new grates. If possible, use an ash pan in your furnace, and avoid shovelling ashes, and consequent dust.

To start a furnace fire begin with small kindling until the chimney is warmed, then put on the heavier wood, and when thoroughly ignited put on the coal.

Avoid starting the fire with too much bottom draft opening. If smoke is driven back into the cellar close the bottom draft to a point where draft of air through the grate will be equalled or exceeded by the draft of the chimney.

Do not feed too much coal at one time. Unless the draft of the chimney is very strong, the gas will collect and explode in the furnace. When feeding the furnace with coal close the bottom and check drafts, and open direct draft damper, to prevent escape of coal gas through feed door. You will need all the chimney draft to counteract the check produced by opening the feed door.

Buy good coal. Economy of money in buying coal means an expenditure of time in caring for the fire. If your chimney draft is poor select a clean, hard coal with a minimum of sulphur.

To produce the best results with the least fuel, the heating apparatus must be kept in good condition.

HARDWAREMAN MARRIED.

The home of Irvine Parks, county treasurer, South Napanee, was the scene of a very pretty wedding on Wednesday, when his niece, Miss Emma Jane Scott, was married to G. J. Hooper, a hardware merchant, Toronto, and son of Dr. Hooper, of that city. The bride, one of our popular young ladies, wore a handsomely trimmed pale blue silk, and carried a bouquet of white roses. She was assisted by Miss Lillie Pringle, in a pretty white organdie, and carried a bouquet of red roses. Frank H. Carson was best man, and the ceremony was performed by Rev. S. T. Bartlett in the presence of about 36 friends and relatives. The bride was given away by her uncle. After partaking of a delicious lunch the happy couple left for their home in Toronto. The bride's popularity was manifested by the large number of valuable and useful presents received, the groom's gift being a handsome upright piano. The bride made her home in Napanee with her uncle and aunt for the past 13 years, and has a large circle of friends. — Napanee Beaver.

THE "SUN" SHINES FOR ALL.

To meet the demand for varnishes which will give a smooth, hard finish, and enhance the beauty of the surface upon which it is applied and for general purposes, The Canada Paint Co. have introduced the universal "Sun" varnish. It is said to be made from selected, clear, bright gum, and every tank is thoroughly matured and tested before being put into tins. The name "Sun," which is registered, is a happy hit for this varnish, which gives brightness wherever used.

Special sealed cans are used by The Canada Paint Co., and the labels and packages are modes of utility and style. The banners and booklets which go with the "Sun" varnish are gems of the lithographer's art, and it is satisfactory to note that everything connected with this venture is "made in Canada."

AMONG THE STOVE TRADE

The body of Alexander Abbott, tinsmith, Vancouver, who was drowned on January 16, was recovered last week.

Vincent Vanse, tinsmith and stove dealer, Montreal, is advertising his business for sale.

The Macdonald Manufacturing Co., Toronto, are seeking to issue a writ against The Canada Tin Plate Decorating Co., London, Ont., to restrain that company from offering inducements to their employes to leave their positions in Toronto to go to London.

Window and Interior Displays

Timely Hints and Suggestions.

IDEAS ON WINDOW DRESSING.

HARDWARE AND METAL, Montreal

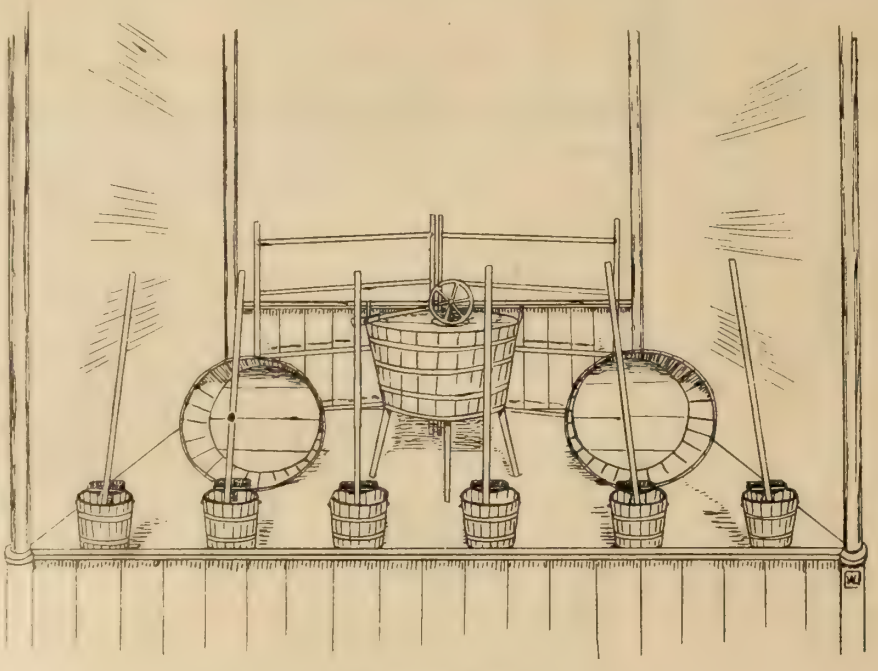
Gentlemen,---We noticed in your journal last week [illegible] window display. You will oblige me very much by letting me know, either in your [illegible] by mail where I could get a few ideas on the latest of window-dressing, for I would like very much to have our store fixed up, as trade in this town is getting pretty keen. By so doing you will greatly oblige, Yours very truly,

WE are in receipt of the above letter from a prominent hardware merchant in an Ontario town. The tone of the letter denotes a progressive, live merchant who realizes the value of window decorating. From the correspondence received since this department was inaugurated, we are extremely pleased to notice an ever-increasing desire among hardwaremen to assist their business through their windows.

Our correspondent asks for a source of information where he can obtain the latest hints on window-dressing. There comes to this office all the principal publications of the world dealing with hardware, and not one of them is as yet devoting as much space regularly to the window as we are. Nearly all of them are gradually working around to a realization of the fact that a hardware merchant requires a well-dressed window as well as a dry goods merchant. As a result of this, the majority of our exchanges are publishing hints on the art, collected from subscribers, but as yet none have adopted a regular department dealing with the subject. There is no doubt but that within a couple of years no hardware journal will be a success without considerable attention being paid to this department.

There appears to have been a prevalent idea among hardware merchants and journals that in all lines but theirs the window was important. We do not see why that idea should have been general unless it was because the hardware stock consists for the most part of small articles which entail much handling in making a display, or perhaps it is an abhorance of the dirt which a window-dresser of hardware must always meet with. Certain it is, however, that the hardware merchant has been almost the last to recognize the importance of displaying his goods.

In our opinion there are few lines affording more versatility of display than the line we are dealing with. The very smallness and variety of the articles allow thousands of arrangements that are effective. One feature decidedly in favor of the hardware merchant is that there is practically no elaborate structural work necessary in the display of his goods, The efficiency of the window depends entirely upon the arrangement of the goods themselves, and not at all, or at least very little, on any outside constructions.



A Wash-Day Window

The hardware merchant who trys to imitate a dry goods merchant in his window-dressing will find himself wasting time and money. In dry goods, what might be called the accessories, that is the fixtures and decorations, are usually the important part of the display. Articles have to be held in place and spread out, so that fixtures are necessary, In hardware, however, where each thing is solid and position counts for very little, the whole scheme of the window must usually be in the arrangement as a whole, rather than in the position or arrangement of each separate article. Then again, fixtures cannot be concealed by the thing displayed as they can in dry goods. The fixtures shown last week are practically all that is necessary in the display of hardware, as solid platforms, slanting or otherwise, and shelves form the only really useful structures for displaying such goods.

We are sorry that we cannot give our correspondent the information he desires, as we not only wish to aid our subscribers all we can, but also aim at a greatly increased interest in their windows among hardware merchants. If every dealer who has a window or an interior which has attracted attention in his locality would have it photographed (at our expense if need be) and send a picture to us to be reproduced in these columns he would not only receive assistance from the criticism given, but also from the pictures of others who might send.

THIS WEEK'S ILLUSTRATON.

This window may be called "A Wash-Day Window," for even the floor-washing articles belong to wash-day. In the front are arranged pails with mops leaning against scrubbing brushes, and in the centre of the window are two tubs and a washing machine. A clothes-horse completes the exhibit A number of variations may be made of this display by using wash-boards, different sized tubs and different makes of washing-machines. Be careful, however, not to have too many articles included.

ACCOUNT REMITTANCE.

By H. B. W.

To the retail merchant who will not take advantage of the saving of time, labor and expense by settling all accounts by sight or time drafts, as described in a recent article on this page, the following suggestions in regard to remitting by cheque or money order, might not be out of place:

In the first place, when the wholesale merchant agrees to look after cash discounts for the retail dealer, by drawing systematically, but the retail merchant prefers to remit, advantages should not be taken when the terms are, say, 30 days, by allowing the account to remain outstanding, say, 60 days, and at the expiration of this time, remitting, and deducting full cash discount.

As a rule, a statement will be sent, either at the first of each month, or a few days before the account becomes due. When remitting this statement should be returned to be receipted. In nine cases out of ten the customer, will simply send a cheque or money order in a letter, stating that he is inclosing it, without any explanation of how the amount is made up and it therefore necessitates, sometimes, considerable correspondence which might be eliminated by returning the statement, with particulars and deductions, as mentioned above.

Extra care should be used in remitting to ascertain that the cheque is properly made out and signed, and that the post-office order is accompanied by a letter or statement in order that the receiver may know whom to credit. Instances occur daily where remittances are received without any trace other than the postmark, or when they originated. Stamps are very often attached to post-office notes to make up an amount, but they should not exceed 10c., as post-office notes are provided for amounts of 10c. and over.

It is hardly necessary, when returning a statement to be receipted, to write a letter stating that the cheque is inclosed, unless some explanation is deemed advisable in regard to deductions made.

To the merchants doing a fairly large business it might be advisable to have cheque and statement combined in one form, the latter being placed to the left of the cheque proper, no fold being necessary and no acknowledgement being called for. When an account is small, say, under $5, a money order should be sent in preference to a cheque, unless the latter is marked "Payable at Par," as it is unreasonable to be obliged to pay 25c. exchange on so small an amount, and usually the cost of remitting will be allowed by the recipient.

DEARTH OF GOOD BOOKKEEPERS.

In spite of the fact that there is supposed to be a plethora of clerks in all commercial centres, it is a well known fact that it is difficult to get first-class office hands, notwithstanding the fact that employers are ready to pay substantial salaries. The head of a well-known firm in Toronto has within the last few days been touring the offices of accountants, auditors, etc., in search of a good bookkeeper. To a representative of "The Canadian Grocer," he said that he was driven nearly to his wits end trying to find a good man for the position.

"We recently took a man on," he said, "who professed to be a chartered accountant and an expert in all bookkeeping matters, but he has made such a bungle of our books that if we keep him on much longer we shall be ruined."

A MULTIPLICATION-ADDITION TABLE.

The following table was worked out by a Harvard professor. It is interesting to look at, but one is thankful it is not included among the multiplication tables:

1	times	9	plus 2	equals 11
12	times	9	plus 3	equals 111
123	times	9	plus 4	equals 1111
1234	times	9	plus 5	equals 11111
12345	times	9	plus 6	equals 111111
123456	times	9	plus 7	equals 1111111
1234567	times	9	plus 8	equals 11111111
12345678	times	9	plus 9	equals 111111111
1	times	8	plus 1	equals 9
12	times	8	plus 2	equals 98
123	times	8	plus 3	equals 987
1234	times	8	plus 4	equals 9876
12345	times	8	plus 5	equals 98765
123456	times	8	plus 6	equals 987654
1234567	times	8	plus 7	equals 9876543
12345678	times	8	plus 8	equals 98765432
123456789	times	9	plus 9	equals 987654321

LOSSES ON OFFICE-SAVING DEVICES.

He is a wide-awake business man who keeps his eyes open for office-saving devices. At the same time he needs to be extremely careful that he does not discard one system for that which is worse. That some of them do as has been made evident to us several times where expensive systems of bookkeeping, in some instances, costing in the neighborhood of $2,000, have been found totally inadequate for the requirements of the business after being put in. We know of one instance where such a system was never even employed after being taken into the office on account of its intricate and impracticable methods.

DESKS FOR GIBRALTAR.

The Office Specialty Manufacturing Co. advertised desks and office furniture in "The Canadian Grocer" more than a year ago. The other day they received an order from The Anglo-Egyptian Bank, at Gibraltar, for a roll-top desk, chair and table, etc.; in fact, a complete outfit for the manager's room at their Gibraltar office. It is expected that as a result of this, further orders will follow, not only from this bank, but from Gibraltar and other Mediterranean ports.

A UNIQUE SYSTEM.

E. & S. Currie, wholesale men's furnishers, use a unique system of acknowledging the delivery of parcels addressed to their travellers. With each parcel, a slip with a duplicate is also sent, and the traveller is required to fill in date, place of receipt, his name and what the parcel contains, and mail the duplicate to the home office. In this way errors are eliminated, and the firm know exactly where their employe is.

OFFICE FITTINGS.

The Geo. B. Meadows Wire and Iron Company, manufacturers of bank and office fittings, etc., Toronto, during 1902 fitted out no less than 30 branches for Canadian banks in Canada. The territory extended to the extreme points of the compass, including one contract for the Bank of Commerce at Dawson City, Yukon, and one for the Bank of Montreal at Glace Bay, C.B. They are also at present completing a set of fittings for the Union Bank at Court Spain, Trinidad, while the two handsome offices of the Bank of Toronto, in course of erection in the "Queen City," will also testify to their ability in this line.

Want Ads.

In this paper cost 2 cents per word each insertion, payable strictly cash with order. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure. Don't forget to send stamps or postal order when sending in copy. When replies come in our care 5 cents additional must be included for forwarding same.

PAINT, OIL AND BRUSH TRADES

THE TURPENTINE MARKET.

DULL AS turpentine is now the talk of the market. The local demand is very light and has no effect on prices which seem to be ruled entirely by the exceptional conditions in Savannah, where, on Monday, the stocks on hand were but 3,243 barrels, less than one-fifth the quantity carried at this time last season.

Conditions here are in a measure the same as those ruling in New York on Wednesday, reported by The Journal of Commerce as follows: "The demand was absolutely inactive yesterday, and no sales whatever were reported. This condition was accompanied by a general easing up in prices. Holders were far less confident regarding the future of the present season's values, and machine-made barrels were offering at 67c. and oils at 66½c., without business."

The demand locally is practically restricted to 5 and 10 gallon lots, which are 5c. higher than the barrel prices. The price quoted, as we go to press, is 98c., but the indications point to an advance of 2c. by to-morrow morning, which would make the price for lots less than a barrel and more than 5 gallons, an even 81 per gallon.

Stocks in Toronto are unusually light and are not likely to be of generous proportions before March 1. Buyers are only taking what they actually require, which is the wise step under the conditions.

HOLLYWOOD PAINT COMPANY.

For some time negotiations have been under way for the amalgamation of The Hollywood Paint Co., Hamilton, and The McLennan Paint Co., of Buffalo. Details were completed on Monday, when W. H. Kestin, of the Buffalo concern, was elected secretary-treasurer of the Hamilton Company, which continues under its own name and with the following board of directors:

President—Seneca Jones.
Vice-President—H. P. Coburn.
Secretary-Treasurer—W. H. Kestin.
Directors, C. T. Grantham and James Thomson.

NOW IS THE TIME FOR ORDERS.

There is no time like the present. It is better to be a month earlier than a day too late. The hardwareman who gets posted regarding the parties who intend erecting new houses, barns or other buildings, or re-painting old ones, and who gets after orders in advance for paints and materials, is the man who will get the bulk of the trade in this line.

Many people who have not decided to build or repaint may be persuaded to do so during the next month or two by the hardwareman who has studied the question and can give them good advice regarding the matter.

ABOLISHED THE ASSOCIATION.

At a recent meeting of the Dominion Paint Grinders Association, held in Montreal, a resolution was passed to do away with the White Lead Association and the Putty Association. The prices of white lead have been open since August last, so that the closing of the Association will not alter the present market price.

CHIMNEY BLAZE.

In last week's issue we reported a small blaze in P. D. Dodds & Co.'s warerooms on McGill street, Montreal, in which we stated that the shelves containing lampblack and kalsomine were somewhat damaged. Instead, it was only a chimney blaze, and no damage whatever was done to the stock.

PAINT AND OIL NOTES.

J. H. Lambert & Co., painters, etc., of Montreal, have dissolved.

London painters intend asking for 25c. per hour and an eight-hour workday.

Kingston Painters' Union held a dance on Thursday night, which was well attended by members of the union.

A. T. Gurd, of Petrolea, Ont., says that the "Gurd" gusher now yields 75 bbls. per day. There is considerable water in the flow.

Joseph McCausland & Son, Limited, of Toronto, have been incorporated with $40,000 stock capital. The provisional directors are Joseph and F. H. McCausland and F. H. Young.

PAINTING IRON TO PREVENT RUST.

An improvement on the usual method of painting iron to prevent rust is suggested by a writer in The Painters' Magazine. He would put on a first coating of boiled oil immediately after the metal has been thoroughly cleaned in the factory. The oil, if applied hot, would find its way into all the crevices and holes in the iron, where paint could not enter on account of its thickness and incapability of running, not only in cracks and holes but in perfect surfaces. One or two coats of the oil would form a suitable ground for either a paint or cement finish.

PAINT AND OIL MARKETS.

TORONTO.

THE orders booked for spring delivery continue to arrive in large volume, the size of orders proving a general feeling of optimism throughout the trade. Another pleasing feature is the promptness with which payments are made. Some spring orders are now being sent out. These are dated April 1, as they are on spring account. Prepared paints have sold especially well for future delivery this spring. Prices are firm, with the exception of white lead, which is still being cut. Turpentine keeps on stiffening, and on account of the prices are moving in 5 and 10 gallon lots at 98c. An advance of 2c. is anticipated. We now quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5 to $5.25; No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½.; No. 4, $3.50 to $3.75 in packages of 25-lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. pkgs.; genuine dry white lead in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.50; ditto, in kegs of 100 lb., $5; No. 1, in casks of 560 lb., $3.75; ditto, in kegs of 100 lb., $4.25.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In 5-gallon lots, 60 to 75c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb.; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c. per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.25 to $2.35; white, $2.35 to $2.45 per gal.; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8½c. per lb.; cabinet glue, in bbls., 12c.; emery glue, in bbls., 17½c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.10; bladders, in 100-lb. kegs, $2.25; bulk in barrels, $1.80; bulk, less than barrels,

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 9 to 9½c. per lb., and 10 to 10½c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 93c.; 2 to 3 bbls.. 92c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

GASOLINE AND BENZINE.—We quote as follows: Benzine, 19¼c. and gasoline, ordinary, 21¼c. and engine, 22¼c. f.o.b. Toronto.

MONTREAL.

The paint and oil business seems to be going along very briskly, and manufacturers are kept busy. There has been a keen demand for dry white 'lead and orange mineral. Stocks in lead products are not over abundant and holders show some hesitancy in selling. The sap, as turpentine is called before being distilled, has not commenced to run yet, and the stocks are exceedingly low in Savannah. One of the largest importers in Montreal says the stock is only 3,000 barrels, as against 20,000 barrels last year. It is thought that turpentine will be imported from London, Eng., where they have very large holdings at present. The market still continues to advance and no relief is looked for until spring. Linseed oil is a little firmer this week in sympathy with the stronger feeling in the English market. We quote:

GROUND WHITE LEAD.—Best brands, Government standard, $5.00 to $5.25; No. 1, $4.27½ to $4.87½; No. 2, $4.40 to $4.50; No. 3, $4.02½ to $4.12½; No. 4, $3.65 to $3.75 all f.o.b., Montreal. Terms, 4 months. or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—$5 in casks, and in kegs, $5.25.

DRY WHITE ZINC.—Pure dry, in casks, 6¼c.; in 100-lb. kegs, 6¾c. No. 1 zinc, in casks, 5¼c.; in 100-lb. kegs, 5¾c.

WHITE ZINC (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No.2, 6c.

PUTTY.—We quote: Bulk, in barrels, $1.80 per 100 lb.; bulk, in less quantity, $1.95; bladders, in barrels, $2.10; bladders, in 100 or 200-lb. kegs or boxes, $2.25; in tins, $2.20 to $2.50; in less than 100-lb. lots, $2.75 f.o.b., Montreal, Ottawa, Toronto, Hamilton, London and Guelph. Maritime Provinces, 10c. higher, f.o.b., St. John and Halifax. Three per cent. discount for cash in 30 days.

ORANGE MINERAL.—Casks, 7c.; 100-lb. kegs, 7¼c.; smaller quantities, 8¼c.

RED LEAD.—Genuine red lead, in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities, $5.75 per 100 lb. No. 1 red lead, casks, $4.25; kegs, $4.50, and smaller quantities, $5.50.

LITHARGE.—Ground, casks, 5c.; less quantities, 5½c.; flake litharge, casks, $5.25; smalls, $5.75 per 100 lb.

LINSEED OIL.—Raw, 1 to 4 barrels, 59c.; boiled, 62c.; raw, 5 to 9 barrels, 58c.; boiled, 61c. Terms, net cash in 30 days. Delivered in Ontario, between Montreal and Oshawa, at 2c. per gallon advance.

TURPENTINE.—Single barrels, 93c.; 2 to 4 barrels, 92c. Terms, net cash in 30 days.

SHELLAC VARNISH.—Pure white, $2.35 to $2.45; orange, $2.25 to $2.35.

MIXED PAINTS.—$1.20 to $1.40 per gallon.

CASTOR OIL.—8¾ to 9¼c. in wholesale lots, and ½c. additional for small lots.

SEAL OIL.—48 to 50c.

COD OIL.—35 to 37½c.

PURE CANADIAN PARIS GREEN.—Petroleum barrels, 13¼c. per lb.; arsenic kegs, 13½c.; 50 and 100-lb. drums, 14c.; 25-lb. drums, 14½c.; 1-lb. packages, 15c.; ½-lb. packages, 17c.; 1-lb. tins, 16c.; ½-lb. tins, 18c.

PURE ENGLISH PARIS GREEN.—Petroleum barrels, 14¼c.; arsenic kegs, 14½c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. paper boxes, 16c.; 1-lb. tins, 17c.

WINDOW GLASS.

TORONTO.

Prices are changed throughout. We quote: Star, Under 26 in., $3.80; 26 to 40 in., $4; 41 to 50 in., $4.50; 51 to 60 in., $4.75; 61 to 70 in., $5; 71 to 80 in., $5.50. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days.

MONTREAL.

Locally a good trade is doing and the prices are steady, but as yet very little outside trade is reported. We quote as follows: First break, 50 feet, $2; second, $2.10 for 50 ft.; first break, 100 feet, $3.80; second break, $4; third break, $4.50; fourth break, $4.75.

The large extension of The Cataract Power Co., on Victoria avenue, is being rapidly put up, and the new machinery will soon be installed.

HALIFAX and MONTREAL,

CEMENT TRADE NOTES AND COMMENT.

THE annual meeting of The National Portland Cement Company, and the visit to the works at Durham, Ontario, has aroused much interest in that company's works. About 300 shareholders and others made a tour of the entire works, starting at the huge clay-drying rotary, through the factory, which seemed full of vats and slurries and pug mills and air compressers, and air pumps and other articles of machinery, all engaged in certain duties in connection with the mixing of the clay and marl, prior to the process of mixing; through the rotary building, where huge drums, 70x6 ft., were converting the mixed marl and clay into clinkers by the peculiar burning process, which consisted of a stream of pulverized coal, blown into the burning firery furnace, estimated to have a temperature of 2,500 to 3,000 deg. Fah.; thence to the clinker pits, from which the product is conveyed to the grinding department. Here it is partially pulverized, then automatically transferred to the tube mills, where it is pulverized so fine that it will pass through a wire gauze of 10,000 meshes to the square inch, and the process of manufacture is thus complete. By a system of conveyors the finished product is carried to the bins of the warehouse and stirred up till ready for packing, which is also done automatically and rapidly.

The powerhouse, where 750 h.-p. is developed, the laboratory, where experiments and tests are made, the lake from which the marl is taken by dredges, were all visited by the party.

In the evening the annual meeting was held at the Rossin House, Toronto, when the following board of directors were re-elected:

President—W. F. Cowham
Vice-President—A. F. McLaren, M.P.
Treasurer—Gilbert McKechnie.
Secretary—P. W. Stanhope.
Director—Barlow Cumberland.

In his speech to the directors President Cowham elicited some interesting facts about the growth of the consumption of cement. In Toronto there were but two miles of cement pavement, constructed in 1891, he pointed out, while last year 27 miles of it were put down, and about 40 miles a year would be put down in the years to come. In other cities the same conditions are manifest. Farmers are replacing their wooden stable floors with cement concrete, because it makes a better floor and one more conducive to the good health of their stock. Cement silos are now taking the place of wooden ones, as, on account of being exposed to fermentation, the wooden ones soon decay and have to be replaced. Cement bridges and even cement buildings were taking the place of wooden and stone ones all over the country.

The production of cement is now receiving much attention in Manitoba. In the annual address before the Winnipeg Board of Trade, John Russell referred to the industry as follows:

"An industry that has taken a prominent place in Manitoba during the last year is that of cement both ordinary and plaster of paris. Several factories in existence last season turned out these products to the full extent of their capacity, and it is most gratifying to learn that unlimited quantities of the raw material have been found in a very widely extended area. I would recommend that a standing committee on manufacturing interests be appointed by the Board."

The Western Ontario Portland Cement Company have been incorporated with $500,000 capital and headquarters at Atwood, Ont.

Machinery for the new cement works of The Ontario Portland Cement Company, at Blue Lake, has commenced to arrive. Parts of the large rotary kilns are already there and will be installed immediately.

CATALOGUES, BOOKLETS, ETC.

MANUFACTURERS' CALENDAR.

The Taylor-Forbes Co., Limited, manufacturers of general hardware, castings, lawn mowers, etc., Guelph, Ont., have issued a calendar for 1903 which will be of use to the men whose engagements are many and whose memory is not too reliable. It is in tablet form, containing a great number of pages. Opposite each date a good space is left for jotting down memoranda of any sort, and extra ruled pages at the back are also added for this purpose.

WILL BE A BROKER.

P. M. Bellhouse, who has been with Peck, Benny & Co. for a number of years, the major portion of which he was office manager, is going into the broking business with C. Simpson Garland, stock broker. The congenial manners for which Mr. Bellhouse has always been noted in personal contact with him, and in his correspondence with customers throughout the Dominion, has won him a reputation which not many enjoy. He will be greatly missed amongst his confreres in the iron world, bu never forgotten. In the new venture his abilities and wide business connection will doubtles secure for him a prosperous future

THE SURVIVAL OF THE FITTEST!!!

The advent of the "SUN" Varnish in an attractive form for retailing will revolutionize the sale of Varnish for universal purposes.

The "SUN" is destined to have the largest sale of any brand in the Dominion of Canada.

The "SUN" is a uuique Varnish made by The Canada Paint Company only.

For particulars, ask our traveller, see page No 46 of catalogue for 1903, or address,

THE CANADA PAINT COMPANY, LIMITED.

Made in Canada.

HEATING AND PLUMBING

BETTER VENTILATION WANTED.

THAT many public buildings are badly in need of proper ventilation is unquestioned. An exchange publishes the following plea with the suggestion that business men interested in ventilating should encourage the advocacy of better ventilation :

" There should be a sanitary committee appointed some way or some how," says the writer, " to report on the ventilation of public buildings, including business offices, lecture-halls, churches, theatres, school rooms, travelling conveyances and all other places where people are wont to congregate. In nine cases out of ten in entering these places one is met with a stifled, dead air, if not nauseating, and then we are ready to criticize the indifference or impoliteness of the employes, when the truth is they are partially mad from the constant brain stuffing of poisoned air. Carbonic acid gas, the effusions of tobacco, liquor and the results of bad dietetic habits of those who visit or work in the room, all being thrown off, with little ventilation, is the fate of a large majority of those who occupy public places of business. A woman cannot ride in a public conveyance with the benefit she should receive, because of this same negligence. If she ask for better ventilation she is ignored or rather told others do not desire it."

ACETYLENE LAMPS FOR A PENNY.

The masterpiece in gutter merchants' penny lines is surely the waistcoat-pocket acetylene lamp now being offered for sale in the London streets, says Ironmonger. The apparatus consists of a glass tube about 2 in. long and ½ in. in diameter, pinched in at the top to form a neck and burner and plugged with a cork at the bottom. The "installation" includes a piece of calico and a pill-box full of carbide particles. Gas is generated by dipping the rag in water, squeezing out part of the moisture and replacing it in the tube with a tiny piece of carbide. Acetylene immediately issues from the top, and when lighted gives a flame which at first is about an inch long, and then gradually dies down till the carbide is spent. A piece of carbide about the size of a pea will give a light for several minutes. Whether or not the "generator" is a dangerous toy I must leave your acetylene expert to say, but that it is capable of affording much cheap amusement to a lad with scientific tastes admits of no question. The capacity of the apparatus for filling an apartment with an odor akin to that of rotten eggs is equally unquestionable.

PLUMBING AND HEATING NOTES

Martin & Kirk, plumbers, Sydney, N.S., have dissolved and Chas. D. Kirk continues.

The premises of Geo. Langwell & Son, Montreal, have been damaged by fire ; insured.

Townsend & Walsh, plumbers, etc., of Ottawa, have assigned, and Mr. Walsh has offered 35c. on the dollar.

J. M. Marcotte, Montreal, and George Lefaivre, Quebec, have been appointed joint curators of L. H. Gaudry, plumbers' supplies, Quebec.

William S. Gamble, plumber, died at his home in Ottawa, last week, after a brief illness. He was 35 years of age, and leaves a widow and young daughter. Mr. Gamble was born in Iroquois, Ont., and lived in Brockville and Sault Ste. Marie, Ont., before taking up his residence in Ottawa.

PLUMBERS' REGISTRATION BILL.

The National Association of Plumbers of Great Britain are still agitating for the passage of the Plumbers' Registration Bill, which has been before the British House for so long. At a meeting of a local association at Hull, it was stated that the efforts to secure this Bill had been kept up for 20 years ; yet those desiring it had to content themselves with the knowledge that they had made substantial progress, and that there seemed to be a reasonable hope of its early passage. The following resolution was passed by the meeting : " That this meeting cordially approves of the movement for the national registration of plumbers as a safeguard to the public health, and recommends that the Government be urged to deal with the subject during the ensuing session of Parliament."

TORONTO PLUMBERS MEET.

A special meeting of the Toronto Master Plumbers' Association was held on Monday evening. The object of the meeting was to admit into membership several applicants. There was a good attendance, President Robert Ross occupying the chair. Seven of the applicants were received, the others intending to join not being able to attend. They will be received later.

BUILDING NOTES.

F. W. THOMPSON, managing director of The Ogilvie Flour Mills Company, Limited, states that as soon as the Ontario Legislature ratifies the by law passed by Fort William, granting a bonus to his company, the erection in that place of a fire-proof mill, one of the largest in Canada, will be started.

The Marshall-Wells Hardware Company, Winnipeg, propose to erect a new warehouse.

The Hudson Bay Co. will erect a $40,000 store at Fort Francis, Ont., in the spring.

Foley, Lock & Larsen intend to build a 100 x 100 five-storey warehouse on Market street east, Winnipeg.

Nicholas Bawlf, Winnipeg, intends to erect a $50,000 office building near the Grain Exchange of that city.

A five-storey 133 x 91-ft. warehouse will be put up on McDermot avenue, Winnipeg, by Stobart, Sons & Co.

A large building to contain a bank, several shops and dwelling houses, will be built in Brantford, Ont., in the spring.

The Intercolonial Railway will spend from $80,000 to $100,000 on the big new roundhouse to be built near the one-mile house at St. John, N.B.

Schultz Bros., Guelph, Ont., have the contract for the erection of the Macdonald Institute residence at the O.A.C., Guelph. The job is to cost $80,000.

F. J. Castle, wholesale grocer, Ottawa, intends erecting a six-storey warehouse on Queen street. Ahearn & Soper will also likely erect a building on the same street.

St. John, N.B., will at once call for tenders for the Carnegie library, and it may be taken for granted that all of his gift of $50,000 will be spent on the building.

The Anglo Canadian Cold Storage Corporation, of London, Eng., intend to spend at least $100,000 in the construction of its new building in Carleton, N.B.

The General Public Hospital Commissioners, St. John, N.B., will lay out $25,000 on improvements at that institution, and the Union Club will spend from $10, to $12,000 on the addition to their building.

J. H. G. Russell, architect, Winnipeg, is preparing plans for a large warehouse on Princess street for Martin, Bole & Wynne. Campbell Bros. & Wilson, will

THIS PAINT

Is made along scientific lines. It leaves behind the brush a mass of beautiful color easy to work, that pleases any painter, man or woman who uses it.

It shows the best value in the line of pure paint. It makes money and makes customers. Painters want

RAMSAY'S PAINT

because it has strength and tone; is uniform in color and always guarantees a safe job.

Dealers make money with it because there are many beautiful advertising lines go with it to help it, and it helps itself as well.

build a warehouse on Princess street, for which Mr. Russell will also draw the plans.

A. Chausse, building inspector, Montreal, predicts an exceedingly busy season this year. Contracts have been signed for a number of buildings, which have been destroyed by fire. The building of the projected Carnegie library, the Notre Dame Hospital, the civic hospital, the technical school and other public buildings will furnish any quantity of employment and millions of dollars will be expended for building purposes.

The Victoria Chemical Works, Victoria, B.C., have awarded the contract for erecting a new building, 90 x 35 ft., to Moore & Whittington. As the building will be used for the manufacture of sulphuric acid it will be lined with heavy lead sheeting, about 50 tons of which was received from Chester, Eng., for this purpose, by the China Mutual steamer Ning Chow. This lining will reduce the escape of noxious fumes to a minimum, it is hoped.

WINNIPEG FIRMS BUSY.

H. E. PLAXTON, of The Dominion Steam Heating Co., Winnipeg, is in Toronto this week. He reports a continuance of the activity in building operations which has prevailed in Winnipeg for some time, and predicts even greater activity in the coming spring and summer.

"There are many large buildings going up," said Mr. Plaxton, "and one-pipe steamheating seems to be the favorite. We are just finishing the Strathcona apartment house, in which 24,000 ft. of pipe have been installed. We also put in this building 50 'Ideal' closets, 32 enamelled baths, 50 washbasins and 32 sinks.

"A good feature of work in our city now is that the standard of plumbing and heating done there is fully as high as that done in the cities of Eastern Canada. Our people have the money and the readiness to spend it.

"Outside of Winnipeg, too, prospects are excellent. At Selkirk we have a large job at heating and plumbing additions to the asylum there. Good work is asked for in the outside towns, too."

ADVANTAGES OF ACETYLENE.

M. Masi, a prominent Italian scientist, has recently completed an extended series of observations upon the hygiene of acetylene lighting, says an exchange. He found that the gas in burning consumes less oxygen and gives off less carbonic acid gas and water vapor than is the case with other methods of lighting, excluding, of course, the electric light. In a confined locality it produces less heat than either gas, candles or petroleum, and it does not give rise to ammonia, nitrous acid or carbon monoxide. As the purity of air in factories is shortly to be a subject for legislation in this country these points are of practical interest. M. Masi's conclusions are that acetylene does not present any more danger from explosion than gas or petroleum, and that it is cheaper for a given candle power than all other methods of lighting.

BUILDING PERMITS ISSUED.

OTTAWA.

J. G. Gagnon, two brick-veneered dwellings, Cathcart street, $1,250.

ADVERTISING SUGGESTIONS.

By A. B. Caswell.

"SUCCESSFUL advertising: how to accomplish it?" is the name of a very comprehensive book on the subject, which reached us recently, issued from the press of The Lincoln Publishing Company, of Philadelphia, Pa. The author is J. Angus Macdonald, of New York. Mr. Macdonald is a gentlemen of wide experience in the advertising field, having written and managed the advertising of several of the large departmental stores and business houses in New York. The book is divided into five parts, embracing Ad. Building, Retail Advertising all the Year Around, Special Features in Retail Advertising, Mail Order Advertising, and Miscellaneous Advertising. It contains much matter of special value to the retail advertiser. I have culled a few general suggestions from the book, which I think will be found of interest to the merchant who would improve his advertising. Many of them go to still further forcify points which I have already urged with regard to prices, short sentences, persistency, etc.

Bigness and generosity always attract humankind, especially when that humankind is womankind. So in your bargain stories, give plenty of items and prices.

Newspaper space is too valuable to be wasted with poor, pointless advertising. Let every word in your ads. tell; let every sentence convey a clear-cut idea.

In advertising to women don't waste words with men, be briefer still. Men hate detail, women rather like it; but it's rather expensive to indulge in muchly. The advertising man should know type and its uses. Many a good ad. is spoiled by poor typographical arrangement in the hands of a hasty or careless printer.

Retailers, always give prices in your ads. They're to the initiatory folk what the train is to the engine: the noise and fuss only serves to swing them into view.

Don't be hypocritical in venting your views on paper. Many a good idea has never gone through the sieve of criticism because the critic was too small minded to appreciate its worth.

Always be good-humored in your ads. Good humor is like sunshine, it lightens up many roads; it is always pleasing and attractive, and is a great lift on the road to advertising success.

Retailers, in your ads. give plenty of quotations. Don't have a Niagara of words and a rivulet of items and prices; that's too suggestive of a poor-house pudding—lots of wind and very few plums.

Don't expect results from your ads. in a moment. "Rome was not built in a day," and it takes time for your arguments to simmer in the brains of people who are occupied with affairs of their own.

Ideas come from all sources; a second glance may mean an inspiration; the fluttering of leaves may suggest a train of thought. Quick perceptions see them everywhere and utilize them in advertising.

Size up an advertising medium as you would a man. If the publication has a well-fed, sleek, healthy appearance, it is thriving, and as a publication rarely thrives unless it has a right to, then it deserves consideration.

Brevity is the soul of wit. 'Tis so in advertising. Study brevity as you would spend money; endeavor to lessen your flow of words as you would your flow of cash, yet see that the flow of both is sufficient to do execution.

Top o' column is all right and so is next to reading matter; but the main point, after all, is the ad. itself. See that it is strong in argument, beautiful in appearance and satisfactory in general.

When an idea strikes you, jot it down. When another comes along, pin that down too. In this way the bright advertising writer can keep his ideas constantly on file for reference, instead of their going astray through memory's window.

After all, the greatest study of mankind is woman, with man as a side issue. The advertiser should never overlook this point. When he conquers Her Serene Highness, the woman, he is on the highway to success.

Ideas move the world. Every action, great or small, has its root in an idea. In writing advertising use ideas. If you can't think easily, or are too busy to think, get someone to do your thinking for you. Here's where the modern ad.-writer comes in.

Make your sentences short—likewise your paragraphs. Remember the egg in this, it is a small affair, but very meaty and easily digested.

Hard horse sense is the prime requisite of an advertising man. From the first preparation of copy till its final appearance in a newspaper, this qualification is demanded.

The perceptive faculties must be well developed in an ad.-writer. He ought to grasp ideas from every source, to see points that escape the average, all of which he can utilize in his profession.

In preparing an ad. be your reporter first and editor afterwards. As reporter, get all your best thoughts on the subject down on paper, as editor, trim, polish and elaborate until your ad. is perfect.

Take a thought and express it quickly and easily with one sentence. Treat the second the same way before you venture upon the third. Let each idea stand by itself, never intermingle or jumble them up.

Be natural. Be honest. Be sincere. Be all these to yourself in writing your advertising. The public will recognize these qualities, for they are human and touch all.

In the average body of the average ad. small pica lower-case, answers very well. It makes a clean appearance, is easily read, and is used by many good advertisers.

Advertising is analysis. It is an analysis of the good points of what you have to offer. Analyze your offerings carefully, bring to light all the good points and let the full glare of publicity shine upon them.

The advertising writer is like a sponge, he absorbs every idea within reach. If he does not use suggestions the moment they come to him, they are absorbed in his mental receptacle, to be fished out when occasion requires.

When you set out to prepare your ad., have a mental picture of the space you are to fill. Fill this space right, with neither too many words nor too little. The organ of casuality (as phrenologists call it) is very necessary in an ad.-writer.

When you see a particular style of type set up that you would like to apply to your own ad., don't bother marking type. It is quicker for you and easier for the printer if you paste a bit of that style on your copy with the words, "follow this style."

The advertising writer must use his imagination. Imagination is the sun that lightens up dark places. It lends a charm to prosaic subjects. Bare facts are pills that are more easily digested when

covered with a coating of a good writer's imagination.

It takes time to make impressions. The first appearance of your ad. may be scarcely noticed, the second noticed, but not remembered, the third may make a slight impression, but the succeeding insertions impress to present and past appearances.

Clearness, brevity and point are the triple virtues that the advertising writer must remember. Originality in expression, beauty in typography and all-around nicety are minor virtues, yet all are good and should somehow be squeezed in the ad.

It is not a bad plan to once in a while go around and interview the compositor or head of the composing-room where your ads. are set up. An interchange of ideas is mutually advantageous and welcome.

To write a good ad. you should have a keen interest in the goods themselves. Handle them, fondle them, get acquainted with them—consider richness, beauty and many attractions—then, when you have imbibed the right sort of impressions, let them flow naturally from your pen.

ADVERTISING TO THE CONSUMER.

By J. D. Roberts, "Blue Ribbon" Tea Co., Toronto.

IN this the age of commercial agressiveness the man who advertises stands out in bold head lines, and in the majority of cases is the man who wins. This branch of his business requires as careful watching and directing as the finances; in fact, there is a better opportunity to exercise good judgment in the advertisement department than in the financial, because the possibilities of the former are unlimited, while the latter is limited to a simple record of actual transactions. Your advertising will not take care of itself, and the man who ventures into the field without any regard to that fact will squander both valuable time and money. But it must be remembered that advertising means more than "space" buying.

It is not sufficient to acquire space in a newspaper and announce that Brown & Co., grocers, are prepared to supply their many customers with staple and fancy groceries, coal oil, etc. The fact that they are grocers would convey that. Their space should be filled with new, crisp facts, and full of life; facts that are sure to "hit" someone.

It is well to take one individual line at a time, and so thoroughly idealize it that the reader is attracted in a manner which touches his or her palate and induces them to try the article advertised. Results may be a little slow in coming to the surface, but it cannot but have its effect, and the merchant soon feels the new impulse of life, while his competitor, who follows out old lines and does not do any shouting, gradually lags behind and takes up a position in the rearguard of the commercial column.

Printer's ink is undoubtedly the great modern force; that fact is generally conceded, but it must be backed up by good home influences. For instance, by tasty and forceful window and shop dressing. Brown & Co. have taffy candy to sell, if they dress their windows with 1,000 sticks of the delicacy one is more inclined to go

Mr J. D. Robert

in and buy than if they incidentally place one stick in their window along with an assortment of canned goods, etc. The 1,000 sticks give the impression that this place is the headquarters for taffy candy, and to the palate of the buyer will taste all the sweeter. The argument lies with the 1,000 sticks, and is applicable to any line. Such is human nature, and as Josh Billings said: "People is queer." By meeting this contingency one is hardly open to criticism. You have the goods to sell, and your study should be how to attract the buyer.

The issuing from time to time of "cut" price lists is like boring holes in the bottom of your boat; you will sink sooner or later. There is no room for argument along this line. History has demonstrated this theory and settled it for all time.

Be original, forceful and crisp. Strive to win the respect and confidence of the public. Keep your prices up to a profitable basis, and advertise. Do this and your name is not likely ever to appear in the list of commercial derilicts.

JUDICIOUS ADVERTISING.

Much money is wasted in advertising for the reason that there are many who set apart given amounts for publicity under a vague sort of an impression that it will bring a fair sort of return, however it may be distributed. They do it as unsystematically as they bestow charity, and under an equal impression that it will be accounted to their favor however and which way soever it goes. But advertising injudiciously directed is money thrown away.—Printers' Ink.

A THING WORTH HAVING IS WORTH PAYING FOR ALWAYS.

There are advertisers, lots of them, who are continually begging for editorial puffs. Their belief in puffs is great, even childlike, but they have little faith in legitimate ads. The great reading public, however, is seldom fooled into mistaking a mere puff for news, or for a spontaneous ebullition of opinion by the editor. Not one puff in hundreds is clever enough to pass as genuine reading matter. All the rest are worthless, because they annoy those who read far enough into them to recognize their spurious character.—Advertising Experience.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

Toronto Junction, Canada.

Supplies for the Maple Syrup Season.

Sap Buckets . . .

—EXTRA DEEP AND STRAIGHT.
—THREE SIZES.

They possess many advantages over the ordinary flaring Buckets—being small in diameter they do not catch the rain or snow, and as they are very deep they hang perpendicularly, and consequently will not overflow until full.

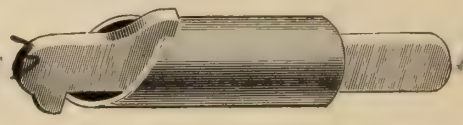
—Covers supplied if required.
—They nest close for shipping or storing.

We can also supply the ordinary Flaring or Western Sap Pails.

E. T. Sap Spouts.

MADE OF RETINNED STEEL—STRONG AND DURABLE.

Only require a ⅜-in. hole in tree.
It does not cover the inside surface of the hole; therefore a larger amount of sap is obtained.
Packed in card-board boxes.



Maple Leaf Sap Spouts.

Made in Bronzed Steel.
Require a ½-in. hole.
Has a shoulder which prevents it being driven in too far.
The hole in the tree is not exposed to wind and snow; consequently, sap will flow longer.
Packed in card-board boxes.

Syrup Cans, round or square.

Plain or decorated. Made in ¼, ½, and 1 gallon sizes.
Either Wine or Imperial Measure.

A full stock carried in all lines; orders shipped promptly.

HARDWARE AND METAL

VOL. XV. MONTREAL AND TORONTO, FEBRUARY 21, 1903. NO. 8.

COMMENT ON CURRENT TOPICS.

THE United States Congress has created a Department of Commerce. It is to be hoped the Minister of the new Department will exhibit more zeal for the duties appertaining thereto than the gentleman who fills the corresponding office in the Canadian Department of Trade and Commerce.

• • •

Turkey has 100,000 armed men on the Bulgarian frontier. The intention is, no doubt, to gobble up the troublesome Balkan States.

• • •

Carnegie is so desirous of peace that he is ready to pay Venezuela's debt to Germany, namely, $360,000. If the millionaire philanthropist would undertake to pay the debts of individual creditors who are anxious to meet their liabilities and cannot, it would be more sensible than liquidating the debts of nations who have no intention of meeting their obligations unless forced to do so.

• • •

The labor party in St. John, N.B., have two candidates in the field for the Provincial Legislature. W. Frank Hatheway, wholesale grocer, is one of the candidates, and he, like his colleague, is laboring hard to win.

• • •

A clergyman has been elected president of the Prince Edward Island Fruit Growers' Association. The cultivation of the fruits of the orchard with the fruits of the spirit should prove a happy combination.

• • •

A Newfoundland paper says: "The promise of the coming season is most gratifying. In lumber, mining and manufacturing there is a better prospect than ever before." This is also gratifying to Canadians. We always like to see our prospective partners doing well.

• • •

The independent tobacco manufacturers of Virginia, North Carolina, Pennsylvania, New York and other States in the Union have organized for mutual protection. They are now smoking the pipe of peace.

• • •

Peter Ball, who has been appointed commercial agent at Birmingham, for Canada, ought to be able to roll up a good trade for this country in his district.

• • •

A deputation waited upon the Dominion Government a few days ago asking for encouragement to start a shipbuilding industry. They ought to be able to "float" their enterprise.

• • •

Cuba is to borrow $35,000,000, a sign that the "Pearl of the Antiles" is advancing in civilization.

• • •

The people who are stealing elephants from the British forests in India may possibly now have some "white elephants" on their hands.

• • •

A cable says the colonies are to be given ample time to tender for supplies for South Africa. It is to be hoped the colonies will take time by the forelock.

• • •

A press despatch says that Mr. Tarte is skeptical. We understand it was because he was not orthodox that he was forced out of the Cabinet.

• • •

The people who deposited their money in the Oakville private bank are now coming in for public commisseration.

• • •

Poor persons who go insane in Toronto are treated by the authorities as if they were criminals. They are arrested and committed to the common jail, whence they are only removed after the usual red tape procedure has been gone through. This frequently takes months. And Death, in the meantime, knowing no red tape, often asserts his claim.

• • •

A good deal is heard these days about municipal control of public utilities. That is all right as far as it goes, but, first of all, would it not be well if the public were to first get a little more control of the municipal authorities.

• • •

In spite of the old adage that two is company and three is a crowd, a third party has been formed in Manitoba.

• • •

A newspaper published in Cannington says "North Ontario is just itching to send Hon. George E. Foster to Parliament." Naturally, therefore, we may expect to see many scratching for him.

• • •

The pressers have joined the striking cutters in Toronto. The object is, of course, to press the employers to capitulate.

• • •

With Messrs. Root and Lodge representing the United States on the board of jurists who are to define the Alaskan boundary, we may expect them to get at the Root of the matter and Lodge a report in keeping therewith.

• • •

Great Britain, Germany and Italy appear to have been eminently successful in bringing Venezuela to time. If merchants were to act in concert they might also be able to successfully bring their delinquent customers to time.

• • •

The midwinter fairs which are being held in different parts of the Dominion for the exhibition of animals and their products are much more emblematical of Canada, and therefore more sensible, than the midwinter ice palaces which were held in the years gone by.

• • •

Judging from the attention the subject is receiving electrical energy is the mo-

tive power upon which industrial activity is to depend.

* * *

Politicians do not always profit by experience. Some 20 years ago the whiskey used in an election campaign in North Ontario became frozen. And yet, in spite of the experience then gained, another campaign has been brought on in that constituency with the thermometer down to zero. If the history of 20 years ago is repeated, the party workers will have a thirsty time of it.

* * *

Some rather unique features have developed in the election campaign that is now in full swing in North York. One of the candidates, wishing to demonstrate to his audience the truthfulness of his assertions, pulls a Bible from his pocket and dramatically presses it to his lips. Another of the candidates has his meetings opened with prayer. For the sacredness of the Book which the one professes to revere, and for the cause of religion which the other professes to believe, it is to be hoped these practices will be discontinued.

BRANDON BINDER TWINE FACTORY.

THE annual meeting of The Brandon Binder Twine Factory was held recently, and the report for the year is a gratifying one for all concerned. The number of shareholders was shown to be 2,968, and the number of shares sold 1,728. The shares remaining unsold were 271. The amount of money paid in by shareholders on stock was $68,210. The financial statement shows $31,033 of manufactured twine on hand, $27,764 of raw material, and $63,286 plant, the total assets being $128,988. The liabilities included $59,008 of bills payable.

Authority was given for the necessary expenditure to ascertain the possibilities of making binder twine from flax, which is a question now occupying a great deal of attention in the West.

It was decided to increase the number of directors to nine, and the following were duly elected: N. Wolverton, Brandon, Man.; W. T. Johnston, Wawanesa, Man.; J. T. Partridge, Sintaluta, Man.; J. G. Burke, Elmore, Assa.; Allan Leslie, Chater, Man.; A. McPhail, Brandon, Man.; John Hanbury, Brandon, Man.; F. W. Smith, Brandon, Man.; E. L. Christie, Brandon, Man.

At the conclusion of the general meeting the new board met and elected officers as follows: N. Wolverton, president, W. T. Johnston, vice-president; S. H. Christie, secretary-treasurer; N. Wolverton, manager. The new board arranged for the immediate flotation of additional stock to the extent of $40,000.

CATALOGUES, BOOKLETS, ETC.

DOWSELL MFG. CO. CATALOGUE.

WHEN clothes wringers, washing machines, mangles, revolving barrel churns, or crates for fruit, vegetables or eggs are wanted, the catalogue of The Dowsell Mfg. Co., Limited is always consulted by the dealer in these lines. During the past few years the reputation of this firm's products has reached such a high standard that nearly all hardwaremen handle their lines. Their 1903 catalogue is the most complete they have yet issued. All the lines are fully described, illustrations of the working parts as well as the exterior being given in all cases. These catalogues will be sent to any reader of HARDWARE AND METAL upon application.

CARRON PIG IRON.

The Carron Co., 125 Buchanan street, Glasgow, have issued a neat, cloth-bound folder containing photographs of fractures of some grades of "Carron" pig iron, with the approximate analysis, breaking strains and deflections thereof. "Carron" pig iron is manufactured, its makers state, almost entirely from Scotch Black Band Ironstone, with the addition of small quantities of other first-class ironstones (no cinder of any kind being used). The Carron Co. would be pleased to send a copy of this folder to any Canadian consumer of pig iron who mentions HARDWARE AND METAL when writing. The work should be of much value for reference.

BRITISH COLUMBIA BULLETINS.

Two exceedingly valuable bulletins have been issued by the British Columbian Provincial Government. One of these, Bulletin No. 7, contains a general review of "Mining in British Columbia," giving details of the work done on the various fields as well as returns of the aggregate output of the different metals. As the yield of minerals in British Columbia in 1902 was approximately $18,800,000, it will be seen that the scope of this review is large indeed. The other bulletin, No. 9, is devoted to supplying information re the "Undeveloped Areas of the Great Interior of British Columbia." To one seeking an opening for investment or desirous of getting a better grasp of the resources of the "Far West" of Canada, these books will be found authoritative. They can be secured on application to Richard Wolfenden, King's Printer, Victoria.

LAURENTIAN STOVES AND RANGES.

A firm that has made particularly rapid strides during the past few years, particularly in developing trade in the new settlements of Ontario and the Northwest, is The Gould Manufacturing Co., Limited, Smith's Falls. This firm are just issuing their catalogue of "Laurentian" stoves and ranges for 1903. These stoves and ranges are made from the latest American patterns, and the greatest care has been exercised to have them abreast of the times in external appearance and internal construction. As considerable extensions are contemplated by this firm, they should be able to take much new business this year. Readers of HARDWARE AND METAL should write for a catalogue of this excellent line of heating goods.

HARDENING ALUMINUM.

A process with the object of increasing the mechanical properties of aluminum has been patented in Germany, says Kuhlow's Trade Review. The process is interesting in the sense that it opens up a view to the possibility to employ aluminum to new uses in giving it certain qualities of endurance and resistence which is wanting in its pure state. It is well known that aluminum works badly with certain cutting tools and files. It has been shown that the alloying of aluminum and magnesium have a marked superiority over pure aluminum, but less malleable and ductile. The authors observed that if aluminum is allied to 2 to 10 per cent. of magnesium the metal obtained is hardly to be distinguished from aluminum, but when this alloy is passed several times through a flatting mill, heated each time towards 400-500 deg. C., its principles are modified. The alloy cuts and files well as though it was charged with magnesium. It has preserved, on the other hand, the ductility and malleability of pure aluminum.

The deepest regret was felt by the members of the Montreal Board of Trade at the very sudden death of Joel Baker, who was one of the oldest members of the Board, and formerly took a prominent part in the business life of the city.

LOOKING FOR A CANADIAN BOOM.

"KEEP your eye on Canada" is advice current just now in Scottish iron and steel circles, especially the former, says Ironmonger, London, Eng. This is due to the receipt of letters from correspondents both in the United States and in the Dominion, pointing to what they consider the certainty of an early burst of industrial activity such as has never yet been seen in our great dependency. Schemes are being worked out for the immediate beginning of big railway and agricultural enterprises, which, it is felt, will rouse Canada for good from the partial lethargy in which she has lain for over a generation. The correspondents referred to agree in the opinion that the United States are not at present in the position to cope with the wants that are likely to arise in Canada very soon, and they advise Scottish manufacturers and merchants who are favorably situated in the matter of freight, etc., carefully to consider the advantages that may follow from at once seizing on the opportunity that seems to present itself. Some arrangements for the development of Canadian trade are being made. In Glasgow, which has many intimate business relations with Canada, the feeling is gathering strength that the Dominion has entered on a new era, marked at the moment by the projected arrangements for the settlement of whole populations in new districts, the extensions of railways, and the liberal influx of American and British capital into hitherto neglected parts of the country. Canadian Government representatives are now visiting different parts of Scotland to call the attention of urban and rural audiences to the advantages of life in the West, and a heavy emigration movement is looked for in the spring and summer months. The Canadian estimate of the outlook is reflected in the arrival this week of travellers representing Montreal iron and steel houses and in the announcement, by mail, of the contemplated early departure for this side of others.

OTTAWA HARDWARE ASSOCIATION.

The first annual meeting of The Ottawa Hardware Association was held in the Board of Trade rooms on Tuesday evening, February 10. The reports all showed a very successful year and everyone is well satisfied that the association is a good thing, and we are all the better for it. The election of officers resulted as follows:

President—E. B. Butterworth.
1st Vice-President—W. G. Charleson.
2nd. Vice-President—Wm. Stratchan;
Treasurer—Wm. Graham, re-elected;
Secretary—J. G. Cowan re-elected.

The Value of Well Aged Varnish.

Properly aged varnish is always the best—other things being equal. No varnish can be as good as it ought to be without proper aging. It is one of the important details which turns out a varnish always the same—one that always gives good results.

Proper aging improves a varnish—improves its appearance, color, and working, drying and wearing qualities. It removes all sediment.

THE SHERWIN-WILLIAMS VARNISHES

are all properly aged. They are stored for months in specially constructed tanks in a room kept at uniform temperature throughout the year. They are carefully watched and tested, and are never sent out until "ripe" and right in every respect.

This after-aging ties up a large amount of capital, but it pays—we obtain superior varnishes.

We make special varnishes for every purpose. Each one is the best varnish for the purpose.

Write us to-day for our varnish prices.

WIRELESS TELEGRAPHY TEST.

WIRELESS telegraphy is to be given a test in Toronto on Saturday, when an effort will be made to send messages between Toronto and Hamilton. Dr. de Forest, an American inventor, is promoting the test. In order to demonstrate the practical value of an invention of his own in wireless telegraphy. He says it has been tested in comparison with the Marconi and Essenden systems with honors to itself. Going into further details, Dr. de Forest explained that the messages, or aerograms, as they are officially known, are sent with a Morse key exactly like that used in sending messages by wire. The dots and dashes which are recorded at the receiving station by the waves of electricity are taken from a telephone receiver. The apparatus required is neither very extensive nor complicated beyond the understanding of those who have only an elementary knowledge of electricity. An aerogram sent from a ship 150 miles out at sea was received on an instrument that could be carried in an overcoat pocket. His system is based on an alternating current of electricity. As the alternating current is used in Washington, the electricity for the tests at the Navy Yard was taken from the regular wires. Where a direct current is used at points where the company has not erected its own power station, a motor-generator is used to turn it into an alternating current.

Dr. de Forest was entertained on Saturday night at dinner by W. [illegible] of 67 St. george street, where Prof. R[illegible] say Wright, Dr. Chant, John [illegible] Burgess, Major Greville Harston, J. K. [illegible] K.C., George Hamlin of [illegible] and others were present.

The first and [illegible] of J. J. R. Alexander [illegible] president Little River East, ha[illegible]

NICKEL STEEL VS. STEEL RAILS.

THE order given some weeks ago by the Pennsylvania Railway Co. for 5,000 tons of nickel-steel rails at $74 per ton as compared with ordinary Bessemer rails at $28 per ton, has centred much attention on this new rail. It appears, says an exchange, that the specifications call for the manufacture of an alloy containing 3 per cent. of nickel. It is claimed that rails made of this alloy will wear five times as long as those made of ordinary Bessemer steel, and that when they are worn out they will realize 20c. per lb. as scrap. This, it is claimed, makes nickel steel the cheaper material, in spite of its high first cost. It is claimed for the alloyed steel that it resists the wear and tear of friction better than does ordinary steel, that it is less liable to break because of frost, that it does not splinter as ordinary steel is liable to do, that it has a tensile strength nearly double that of Bessemer steel, and is less liable to the corrosive effects of moisture and exposure, as well as to crystallization from vibration. These are deemed desirable qualities for ensuring safety in the running of heavy and fast trains, as they minimise dangers from broken rails. It is stated that arrangements are being made for the manufacture of nickel steel for ordinary and marine boiler-plate, and for wire of a special character that is required to have enormous tensile strength. United States metallurgists assert that the addition of nickel to steel from one half per cent. up to about 16 per cent. adds greatly to its strength and resistance to corrosive influences, and that after 16 per has been reached the steel grows soft and very ductile, and takes a polish that resembles nickel-plated ware.

A $60,000 FAILURE.

The firm of Lambert & Fils, builders and contractors, Providence Lane, Montreal, have assigned on demand of Camille Bourdon, lumber merchants. The liabilities amount to about $60,000. There are 47 direct creditors, including the Quebec Bank, which has a claim of $13,775.

A BUSINESS TRANSFER.

The William Hunter Co., Limited, general merchants, Silverton, B.C., have sold their stock and business to Wilson & Barclay. Both Mr. Wilson and Mr. Barclay were interested in the former firm, and are shrewd and reliable business men. THE CANADIAN GROCER wishes the new firm every success.

WHAT IS HE SAYING?

The young man is one of those up-to-date clerks. The lady has come to enquire about **CHURCH'S COLD WATER ALABASTINE** as a result of seeing some newspaper advertising that is being done by **The Alabastine Co., Limited**, Paris, Ont.

These enquiries come early in the Spring, about house-cleaning time, and the dealer who reaps the benefit is the one who has a complete and well-assorted stock. **HOW IS YOURS?** The Trade supplied by Wholesale Hardware and Paint Dealers. Also by **The Alabastine Co., Limited, Paris, Ont.**

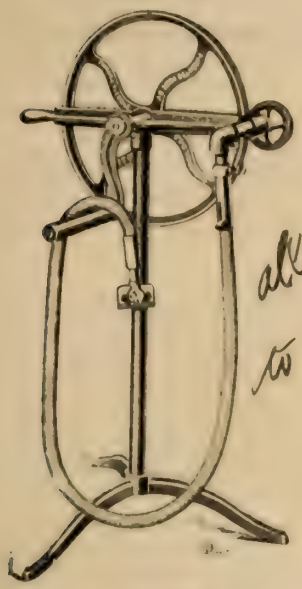
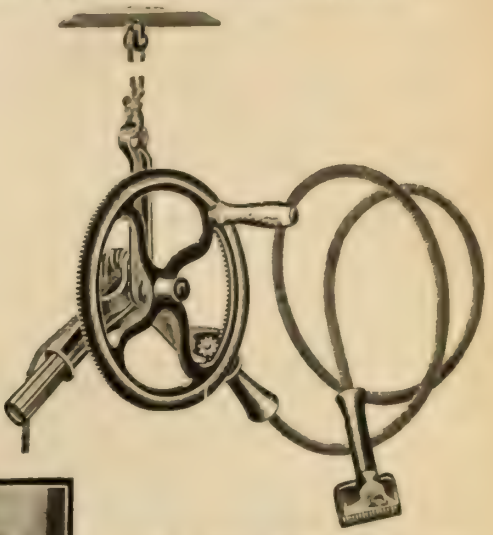
The "Chicago" Horse-Clipping Machines



Knife suitable for "1902," and "20th Century" Clippers.



— 1902 —

"When it comes to quality, no hand-power Horse-Clipping machine that is made *any where*, by *any body*, at *any price*, compares with the "Chicago 1902."

Its construction is so *simple*, *strong* and *fine*; the only machine made that can be turned with the right or left hand.

All the gearing is cut from solid metal. It stands on a firm, rigid base. No belt to slip. Positive power."

A clipped horse dries out from sweating in 20 minutes, and can sleep without risk of getting cold

The "20th CENTURY" CLIPPER.

"Is it any wonder that the demand for the new "20th Century" Clipper is enormous? Why, it gives a customer a machine for a little more than the cost of a hand clipper.

A Time and Money Saver that does a hundred times the work and does it much better.

It hangs up, giving the operator elbow room and facility.

Runs easy—cuts fast—requires no experience to operate.

It only weighs 15 pounds, and when boxed is small enough for shelf goods (3 x 12 x 14 in.)"

MACHINERY

THE LIFE OF LOCOMOTIVES.

THE relative value of English and United States stoves continues to absorb much attention. A valuable contribution to the question was given by Wilson Worsdell, chief locomotive superintendent of The North Eastern Railway Company, who, in a lecture before students of the British Association of Civil Engineers presented the following deductions: "On English railways the life of a passenger express locomotive was 25 years, on an average; of the freight locomotives, 26 years; of local passenger locomotives, 25 years; and of switching or shunting engines, 27 years. The mileage varied on all the lines from 700,000 to 1,000,000 miles during the lifetime of a passenger engine. The mileage of a freight engine was from 500,000 up to 800,000 miles, and of a local passenger engine from 500,000 to 800,000 miles. American practice, however, was altogether different from the English practice. The Americans built their locomotives to last for an average lifetime of 15 years, getting as much work out of them as they possibly could in that time, and then putting them on the scrap heap. The average life of an express passenger locomotive in America was 18 years as against the English 25; of a freight locomotive 16 years as against the English 26; of a local passenger engine 19 years as against 25; and of a shunting or switching engine, 22 years as against 27. The mileage varied also. The American engine ran in its 18 years' existence 2,000,000 miles, double that run by a British engine in a much longer time. The lifetime of a boiler was about the same in America as in England; and the length of time between repairs in America was a year and a quarter or a year and a half, against two years in England."

AN AUTOMATIC ELECTRIC METER.

J. L. McLean, of Peterboro', Ont., has invented an electric meter, which, by dropping 25c. in it, one will receive 25c. worth of current, after which the electricity is cut off automatically, says an exchange. The prepayment meter is similar to the water meter, of which there are 18,000 in use in Montreal and 55,000 in Canada. It is strictly automatic in its action, there being no switches or handles to turn. All the operator desiring light has to do is to go to the meter and deposit therein 25c., or any number of quarters, which will be used consecutively as the light is consumed. Another important feature is that the consumer can check his own machine by the clock which is modelled after the cash-register system, keeping check on the light used for the consumer and of the number of quarters deposited for the company. The meter will do away with all suspicion on the part of consumers that they are being defrauded by meters which they cannot read. If any customer thinks that he is being robbed, all he has to do is to turn on the light and with his watch or the family clock he can tell at a glance how much light he is getting for a quarter. Another important feature is that this meter enables the company to do a cash business, and at the same time ridding the consumer of light bills, as the clock keeps tab on the number of quarters deposited, and which are collected periodically throughout the year.

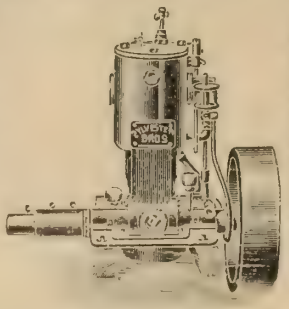
PRIZE-WINNING MACHINERY.

A representative of "Hardware and Metal" had the pleasure of calling at The Sylvester Manufacturing Company's Factory, Lindsay, Ont., where he was shown through the premises. After seeing the manufacture of the different agricultural machines turned out by the company, he was shown through the gasoline engine shop. Here, a surprise awaited our representative. This shop is a building by itself, equipped with the latest-improved machinery and appliances and operated by skilled mechanics, using the best material possible in the construction of "The Sylvester Gasoline Engine," all endeavoring to maintain its past record, namely, a prize winner, having the honor and distinction of being awarded the bronze medal at the Toronto Industrial Exhibition, 1902, against all competitors in Canada and the United States. Every piece used in the construction of the Sylvester engine is manufactured on the premises (except crank shafts, which are imported), thus enabling the company to supervise every part in the production of their engine, and also placing them in a position to confidently guarantee their engine. The Sylvester is handsome in design, perfectly simple, and built for business. The popularity the Sylvester engine has enjoyed in the past, and is enjoying at present, has created a demand which keeps the engine department continually busy. The firm also manufacture marine engines and gasoline launches, having added a launch-building department to their already large plant. We bespeak a great future for the Sylvester gasoline engine.

KEEPING TAB BY ELECTRICITY.

The Washington postal authorities are experimenting with a new mail box, which will keep, it is claimed, perfect tab on collections. The boxes will be arranged on a regular route and numbered. Each will be connected by a wire with an annunciator board in the main office, and as the collector opens the box a bell will ring and an index on the board will tell that the box is open. The apparatus is so arranged that if the collector fails to open a box there is a wire which prevents his opening the next box in the series.

THE SYLVESTER GASOLINE ENGINES AND LAUNCHES.



Awarded the Bronze Medal (the highest prize) at the Toronto Industrial Exhibition 1902. The simplest, most reliable, economical and substantial Engine on the market. Can be used any place, by any one, for any purpose. Sizes 1½ to 16 horse power. Stationary, portable, and marine. Also extra-fine Gasoline Launches, best in the market. Write for Catalogue "H" and testimonials.

MACHINERY AND ELECTRICAL NOTES.

THE Henderson Roller-Bearing Manufacturing Company, Limited, of Toronto, are installing in their new works on Esplanade street, the most modern machinery for making their bearings.

A No. 2 "Petrie" boiler was shipped to The Colonial Typewriter Co., Peterboro', Ont., by H. W. Petrie, Toronto.

A fine equipment of the most modern kind will be installed by The Dominion Iron and Steel Co., Limited, at Sydney, N.S.

The sum of $100,000 will be spent on improving the equipment and rolling stock of the Brockville and Westport Railway.

The John Harrison & Sons Co. have built a large mill at Owen Sound, Ont., in which they will shortly instal considerable machinery.

Two special Crosby presses were installed in the plant of The Macdonald Manufacturing Co., Toronto, by H. W. Petrie, Toronto.

A No. 2 "Godfrey S. Bremer" punch and shear was purchased by McGregor & McIntyre, Pearl street, Toronto, from H. W. Petrie, Toronto.

A fine tool in the shape of an "Oliver" wood trimmer was delivered to J. S. Jocelyn, 102 Adelaide street, Toronto, by H. W. Petrie, Toronto.

The Oshawa Gas and Steamfitting Co., Oshawa, Ont., have installed a 21-in. x 10-ft. lathe. This machine was furnished by H. W. Petrie, Toronto.

A semi-portable return tubular boiler has been installed by W. D. McRae, Wallaceburg, Ont. This boiler was purchased from H. W. Petrie, Toronto.

The agitation for an extension on the I.C.R. to Louisburg, C.B., is growing in strength, the local papers discussing the question with much warmth.

A Brainard Lincoln milling machine was installed by W. P. Sutton, 82 Adelaide street west, Toronto. This machine was purchased from H. W. Petrie, Toronto.

The Ontario Wind Engine and Pump Co., Limited, Toronto, have received an order for a 16-ft. airmotor outfit for South Africa, where it will be installed on a railway contract at Simon's Bay.

The Rothesay, N.B., Water and Improvement Co. have secured water rights, land, etc., and will erect an electric power station and will provide water, power and light for Rothesay. Hon. William Pugsley is president of the company.

The Buffalo Tool and Machine Co., of Toronto, are removing their offices on Bay street to 172 Front street west. Here they will carry a larger range of wood and iron-working machinery than they now have in stock at their present premises.

The Fort William, Ont., Ironworkers' Union have passed a resolution to support only the business and professional men who instal municipal telephones.

The imports of all kinds of belting into Canada during the fiscal year 1902, including leather belting, gutta percha and rubber belting, cotton belting, etc., was valued at $111,800, of which $58,844 came from the United States, and $82,956 from other countries.

A foundry outfit consisting of a Colliau cupalo, No. 11, Buffalo Blower and countershaft and accessories; also a 48-in. x 48-in. x 14-ft. iron planer was purchased by The Niagara Falls Machine and Foundry Co., Niagara Falls, Ont., from H. W. Petrie, Toronto.

The Gillies Launch and Engine Company, Ottawa, have been incorporated with $100,000 capital; provisional directors: T. F. Sullivan, Montreal; J. D. McCann, Westport; A. J. H. Russell, Peter McVeigh, J. E. Askwith, Ottawa. The company will take over the business of The Central Canada Foundry and Machine Works at Carleton Place.

The Empire Machine and Metal Stamping Company, 1012 Yonge street, Toronto, have purchased a fine lot of machinery in the shape of a 20-in. Gould & Eberhardt pattern shaper, and three Crosby presses, one each, Nos. 18, 19 and 20; also a 4 h.-p. upright boiler. The above machinery was furnished by H. W. Petrie, Toronto.

The Bridgeburg, Ont., Review says that the solicitor of The Canadian Shipbuilding Co., Limited, was, at the last meeting of the Bridgeburg township council, asking that an assessed rate be struck on their proposed premises for 20 years. The company have bought 120 acres of land abbuting the river scarcely four miles north of the town of Bridgeburg.

The Farmers' Co-operative Harvest Machine Co., Limited, have been incorporated to engage in the manufacture of agricultural implements and tools. The authorized capital is $1,000,000, and the provisional directors are: Dr. Oronhyatekha, James F. McLaughlin, John A. McGillivray, William J. Clokey, W. E. Wellington, Toronto; Joseph Stratford, Brantford; O. H. Van Loon, Townsend township, Norfolk county; Duncan McEwen, Brantford township, Brant county; John Cornworth, Paris; William Dynes, Village of Granger; E. G. Stevenson, Detroit, Mich. The head office is to be at Toronto.

Over 600 men are employed in the Michigan Central Works at St. Thomas, Ont. The shops have a standing order for 20 80,000-lb. cars per month, and are building four 190,000-lb. locomotives, the first of the kind built in Canada. The engines will be of the compound consolidated type, with cylinders 23x35 and 32-in. stroke. The drive-wheel centres will be 56 in. and the boilers will be tested to 210 lb. pressure. The total weight of the engines will be 190,000-lb. each, 164,000 of which will rest on the drivers. The boiler will contain 365 2-in. flues.

A LIGHTWEIGHT ACCUMULATOR.

Dr. Welsbach, the German savant, whose reputation is world-wide as the discoverer of the Welsbach light, is reported to have at last solved the problem of making an electric accumulator without the use of lead. It has been the terrible weight of the accumulators which has handicapped developments in electric traction; and if Dr. Welsbach's invention proves satisfactory, it will be another feather in the cap of Germany, for it is no secret that even Edison has been cogitating for long over a means of obviating the weight difficulty in connection with accumulators. The succession of inventive triumphs in almost every department of science by Germany during recent years has caused much searching of hearts. Once upon a time Great Britain bore the palm for evolving new and practical ideas, and there is naturally more than a tinge of patriotic regret on our part at the change of venue. Even America takes a seat behind Germany, and yet there even every workman is taught to exercise his thinking faculties; while on the other hand, in this country for an employe to make a suggestion to a principal is often regarded as a piece of sheer impertinence. The subject, comprehensively, is an interesting one; and it may be that in the training of the German youth seeds of inquiry are sown which grow and grow until a harvest of realization is in many cases reaped.

WIRELESS TELEPHONE.

An electrical inventor, named N. B. Stubblefield, of Murray, Ky., claims to have discovered an instrument by which not only sound can be transmitted through space without wires, but that the voice can be transmitted and understood as clearly as with the telephone now in ordinary use. The inventor claims that the ground is a magnet, and that with proper use of his instruments, when they have been perfected, ships at sea can be communicated with or battles directed from one ship to another. He claims that bulletins could be sent from Washington to every home in the country, telling all the important happenings of the day, at a slight cost. As yet 300 yards is the longest distance he has talked.

TO IMPORT WELSH COAL.

THE great scarcity of coal during the winter has had the effect of bringing manufacturers together to discuss the best means of placing themselves in a safer position, in the event of the same conditions prevailing again.

To depend entirely on American coal miners is thought to be rather too precarious a position for manufacturers whose plants must be kept in active operation throughout the year; and the first thought that suggests itself is in relation to obtaining supplies from other sources. Naturally, Welsh coal first presented itself as most suitable and as easiest of access.

A fair quantity of Welsh anthracite has been imported during the past few months, and with all manufacturers it has been pronounced satisfactory, while those who have used it in the household have found no difficulty in adapting it to all purposes to which American anthracite was formerly put.

Mr. Walter J. Phelps, of Wormann & Ward Manufacturing Co., Limited, at a recent meeting of the Canadian Manufacturers' Association in Montreal, stated that Welsh anthracite could be obtained, under ordinary circumstances at a lower price than American anthracite. Over $7,000,000 had been spent last year in coal, which sum could have just as well been sent to Great Britain instead of the United States. Mr. Phelps suggests that if a sufficient number of citizens would signify their willingness to buy Welsh instead of American coal, the coal dealers would be encouraged to import anthracite from Wales for next winter's use.

This is a movement which all will endorse, as did all the manufacturers who were present at the meeting. The greater our imports from Great Britain, the more likely are we to gain a preference on that market; and from an importation of millions of dollars worth of coal, which is increasing year by year, we are bound to get a large reciprocal trade in time. Apart from the direct trade advantages which we would derive from prefering Welsh to American coal, the movement to adopt that course should be helped forward by all who believe in strengthening the connection between ourselves and Great Britain (and who in Canada does not?), for in what better way could it be accomplished than by making our commercial interests, as much as possible, one with those of the Mother Country. If we must send millions of dollars out of the country for coal, let us, at least, put it in the pockets of our best friends.

A TIMELY REMARK.

The Toronto World, which has been leaning towards the side of The Toronto University, contained the following paragraph a few days ago:

The report has gained currency that the place of the late Senator Wood on the University Board of Trustees is to be filled by one of the newly appointed Superior Court judges. The appointment would be somewhat unexpected as the board is already strong in legal ability, with Chief Justice Meredith for chancellor and Chief Justice Moss for vice-chancellor, while Dr. Hoskin combines very happily the qualities of a lawyer and man of business. A business man would seem to be the natural successor of Senator Wood.

The above paragraph is not only pointed and timely, but it is also indirectly an endorsation of the course of HARDWARE AND METAL in regard to Toronto University affairs.

INTERFERENCE WITH PUBLIC RIGHTS.

A GREAT deal is being heard in Ontario just now about the Conmee Act, dealing with the purchase by municipalities of private electrical plants.

One of the features in this Act should appeal to business men as being particularly absurd. We have reference to the clause which provides that even after the arbitrators have fixed upon what they consider to be a fair price for the purchase of the plant by the municipality, an additional 10 per cent. must be added.

If this principal were applied to competition in ordinary business affairs it would remain on the statute book but a short time indeed.

Its ridiculous character would be apparent were we to apply the principal to ordinary business affairs. If, for example, a man desired to start into business in a village he would first of all be compelled to buy out the one or more particular lines of business in which he intended to engage, while after the price had been fixed by competent judges he would be compelled to pay an additional 10 per cent. above the figure which the latter had stipulated.

This principle might please the business men who wanted to sell out, but it would be anything but satisfactory to the man who desired to start a new business.

Such a law applied to ordinary business matters would be accounted a restraint of trade, and yet this is practically what the Conmee Act is.

It is to be hoped that the efforts which will be made during the coming session of the Ontario Legislature to repeal the Act will be successful.

The existing electrical plants have no doubt their vested rights which the State should take every means to protect, particularly when there is developing such a strong opposition to the rights of corporations, but the Conmee Act, in endeavoring to protect these, interferes with the rights of the public.

When there is a mix-in advertising it usually the fault of the merchant.

TORONTO UNIVERSITY AFFAIRS

THOSE who are opposed to the course which HARDWARE AND METAL has taken in regard to the affairs of the Toronto University are endeavoring to hide under a cloud the real question at issue. The Toronto Globe has declared that "the University of Toronto is not what its best friends would like to see it." And yet that newspaper in mightily offended because we have advocated certain improvements in the management and control of that institution. To ask for a more practical conduct of studies in order that education may be made more practical is accounted "the merest vanity" and the aim low and the way vulgar.

If our suggestions do not find favor with The Globe and others who are dissatisfied with them, let them propose something that is better. We heartily assure them that if they do we will give them our heartiest support. All we want is greater efficiency in the educational work of the University. We have it in black and white in the columns of The Globe that the affairs of Toronto University are not what they should be. If it really believes this it is certainly its duty as a newspaper, with an influence probably second to none in the Dominion, to point out why the University is not "what its best friends would like to see it," and, furthermore, to suggest what might be done in order that the desideratum might be secured.

But it required no such confession as that of The Globe, quoted above, to justify the position that has been taken by HARDWARE AND METAL in regard to Toronto University affairs. During the last 10 or 12 years the reputation of the University has been steadily deteriorating. Isolated departments could be mentioned to which this charge would not apply. We are speaking of the University as a whole. For it is by its general character, and not by its actions in certain particulars, that universities, like individuals, must be judged.

That the University of Toronto has lost the popularity it once possessed is putting it mildly. Among no class is this probably more pronounced than among business men. The commercial course started a year ago at the instigation of the Toronto Board of Trade and the Canadian Manufacturers' Association was the result of this dissatisfaction on the part of the business men. The term of this course is two years, and at its conclusion successful candidates are granted a diploma.

This course would never have been created were it not that the commercial and financial interests were ready to grasp at almost anything that promised to improve the practical character of the studies at the University. So far the course has borne but little fruit. It has only one student.

The course introduced nothing new into the curriculum of the University. What it contains was already in the prescribed studies of the University. The only difference is that they were grouped together and labelled "Commercial Course." What then, is the benefit? None whatsoever. Are the prescriced subjects lacking in suitability? Perhaps they might be extended somewhat, but what there is is good.

It is not the curriculum, however, that makes men and fits them for life's battles. It is the character of the men who have the teaching of the subjects. And herein it is that lies the chief secret of the weakness of the Toronto University. In other words, it is not a new curriculum, but new men in some of the chief departments of the University's work.

As a result of this deficiency, the tendency of the University is to create a "cultured aristocracy," and not a body of men fitted for the industrial requirements of Canada. The graduates who are not "cultured aristocrats," were saved from being so, not by the mercy of the University, but by the strength of their own individuality and character.

We have not yet had the last word in regard to this matter.

THE PRICE THERMOMETER.

One of the travellers for a big Canadian paint firm called recently on a hardware dealer in a suburb of Montreal. He wanted to sell varnishes and oils principally. The dealer was in need of a quantity of castor oil and asked the traveller to quote prices on it.

To his embarrassment, the latter suddenly found that he had entirely forgotten the price, and was just about to ring up the firm's headquarters in the city, when the customer interrupted him with, "Oh, never mind; I'll tell you the price."

He brought forth a copy of HARDWARE AND METAL, and although he was a French-Canadian, with a very limited knowledge of English, he ran his finger down the paint and oil column untill he came to "castor," and told the price to the traveller. They then did a fair business on that basis.

THE BICYCLE.

FROM all reports to hand it seems to be an assured fact that the swing of prosperity has again joined hands with the bicycle business, and it is interesting to review some of the causes which have contributed to the falling off in the trade during the past two or three seasons. Perhaps no invention during the past century has met with such meteoric success as the bicycle. The individual ability which it gives to the rider to annihilate distance seemed to almost entrance the the public until wheeling became a perfect craze. Almost everyone who could afford it invested in a bicycle, and many personal sacrifices were made for the sake of the silent steed of steel. This was carried to such an extent that many other lines of business were visibly affected, and the fact that the "Four Hundred" took it up added in no small degree to the demand created.

The craze was altogether too great for a healthy business to endure, and when society withdrew the stamp of its approval, making it no longer "the proper thing" to ride a bicycle, the great army of men and women who wheeled for sport and pleasure laid their bicycles aside. They not only did this, but talking from their own passing feeling and experience, spread the cry abroad that the bicycle was dead, forgetting that it is the most useful and convenient means of individual locomotion ever invented.

The business people, and workingmen and women who had purchased their bi

cycles for the genuine use they got out of them, together with the fresh air and healthful exercise secured while going about their business, and to and from their places of employment, found them indispensable.

In the country where some time ago there was considerable prejudice against them, the farmers now find the bicycle one of the most convenient articles about the place. The members of society and many people who have decried the wheel are also realizing its usefulness and have brought their old mounts forth from the darkness of the attic or are investing in new machines and the bicycle manufacturers and dealers are correspondingly happy in consequence.

A WORD FOR THE STEEL TRUSTS.

WHEN what was commonly called the Steel Trust was organized, it was expected by not a few that it would take advantage of its enormous power to earn large profits and manipulate the market at will.

Although the United States Steel Corporation with its $1,000,000,000 capital, is not altogether in control of the market, it is still suffciently powerful to excercise an enormous influence in the iron and steel trade. This is evidenced from the way in which it has kept the market steady during the period of unprecedented activity.

Instead of taking advantage of the extraordinary demand that has existed during the last year or more for iron and steel, it has steadily refused to take advantage of the market by enhancing prices. On the contrary, it has, where a change has been made, made a reduction instead of an advance in prices. In fact, we believe we are correct in stating that the Trust has not advanced prices in any article since it was formed.

Some of the lines in which it has refused to advance prices and in which the demand has been extraordinarily brisk, are steel bars, steel plates and structural steel. And it is also worthy of mention that the largest buyers have been treated in the same way as the smaller ones; that is, because they were able to buy larger quantities they were not given a better figure than those who had to purchase in smaller quantities

As far as steel plates were concerned, there was every encouragement for the United States Steel Corporation to put their prices up, for during the last three years the consumption of steel plates in the United States has increased about 2,400 tons per day or 720,000 tons a year.

The lines in which reductions were made were wire nails and tin plates.

The course of the United States Steel Corporation in regard to prices has certainly been different from what has hitherto been the practice in trusts and combinations. The Wire and Steel Trust, which existed a few years ago, followed a course to the very contrary. It advanced prices beyond all reason, and to such an extent that jobbers in the United States found that they could buy in Liverpool nails which had been exported by the Trust, bring them back across the Atlantic and lay them down cheaper than they could buy in the home market. The result was a curtailment in the consumption of nails and the eventual collapse of the combination.

So far, the action of the Steel Corporation has been beneficial rather than otherwise. When it might have advanced prices, and even unduly advanced them, it refrained from doing so. It based its action on the assumption that it would only result in a curtailment of consumption and consequently a loss of confidence in the market.

If the Steel Corporation continues to follow this course, and it sets an example which others may also follow, the strong sentiment against large corporations, which now exist in the public mind, will, no doubt, in time become greatly modified

COMPLETE THE CANAL.

AT a meeting in Peterboro', Ont., on Monday, the Trent Canal Association decided to memorialize the Government to complete the waterway, which bears the name of the Association.

The original intention of this canal was to open up a short route from the Upper Lakes to Lake Ontario. However feasable this route may be, it has by successive Governments been made a medium for political purposes. Each Government spending a little now and then, in order to satisfy the constituencies along the route of the proposed canal.

So far, there are about 132 navigable miles completed, while about 33 are yet unnavigable, and up to the end of the fiscal year, 1901, $3,340,700 had been expended on the system.

Whether the work should ever have been undertaken is a matter which we need not discuss. After the expending of so much money it is only reasonable to demand that the work should be completed. For, while it may never be of much use for the passage of vessels of large size, the canal would certainly facilitate transportation in that part of the country tributary to it.

INTERESTING CONTEST FOR A NAME.

What's in a name?
A rose, by any other name would smell as sweet'

In the month of December last The McClary Manufacturing Co., Limited, London, Ont., advertised in the public press for a name which was to be given to a new patterned range made by them and soon to be placed on the market.

Considerable interest, indeed a wonderful amount of interest, in this contest was excited, not only in Ontario, but from one side of the continent to the other ; and the intelligent housewife set her wits to work to select a sweet and appropriate name for this very handsome new range.

Hardware merchants, tinsmith and stove dealers everywhere will be much interested to learn that no less than 20,150 names were contributed by the large number of 7,834 ladies.

The most popular names sent in were King Edward, Marconi, Cook's Friend, Canada's Pride and Kitchener. The winning name was "Pandora" by this the new range will be known, and all dealers will be eagerly on the lookout for it when the season opens.

Three ladies sent in the winning name, and each received a complete range of the new pattern. The winners were Mrs. E. C. Boland, Vandeleur, Grey County ; Mrs. J. Bevis, Hamilton ; Mrs. George McQuillan, Toronto.

Other prize-winning names in order were, "Lady Bristler," Hibiscus, "Sure-lot," "Trojan," and "Terrapin," and the respective winners were Mrs. A. [illegible] Hammond, B. C.; Mrs. J. Daynes, Montreal ; Mrs. M. Maltby, Manor Assa ; Mrs. J. R. G. Bliss, and Mrs. [illegible] MacNeill, Orwell, Prince Edward Island.

London, February 17, 1903. W.H.L.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, February 20, 1903

HARDWARE.

THERE is no let up in the demand for both shelf and heavy hardware, and the wholesale houses are being pushed to fill orders. There is no special feature to note in regard to changes, except that American axe and sledge handles have advanced about 10 per cent. during the past week. An advance of from 5 to 10 per cent. has occurred in brushes, and we learn from a reliable source that in all probability the increase is to be permanent. Rubber belting has also been advanced from 10 to 15 per cent. There is a scarcity of cast iron goods, and an advance is daily looked for. Horse nails are a little steadier than a week ago and the prices remain unchanged. The new prices issued on cold blast, crank, tilt or lift lanterns, are about the same as we have been quoting.

LAWN MOWERS. The movement in Lawn mowers for spring delivery is good. Quotations follow. 10½-in. wheel x 12-in. cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14 inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12 inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—A fair inquiry is noted for barb wire and the market is steady. Our quotations are as follows: $2.80 per 100 lb. f.o.b. Montreal; $2.15 f.o.b. Cleveland, in carlots of 15 tons; $2.67½ f.o.b. Cleveland, in smaller lots.

GALVANIZED WIRE. The market is unchanged and very little business is transacted. We quote: No. 5, $3.70; Nos. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE. There is no change to note in this market, and trade is quiet. We quote: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE WIRE. Orders for future delivery are coming to hand daily. The discount is still 25 per cent. with the following extras: 1 and 2 lb. hanks, 25c. per 100 lb.; ½ lb. hanks, 37½c. and ¼-lb. hanks, 50c.

BRASS AND COPPER WIRE.—The market remains quiet and the discount is 62½ per cent.

FENCE STAPLES.—A good business is reported and the prices are steady at last week's quotations: $3 per 100 lb. keg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

WIRE NAILS.—The demand for wire nails is brisk and the market is firm. We quote as follows: Carlots, $2.40 and small lots, $2.45 per keg f.o.b., Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

CUT NAILS.—The movement in this line is good for spring shipment. Our quotations follow: In carlots, $2.40 and in small lots, $2.45 per keg.

HORSE NAILS.—A steadier feeling prevails in horse nails this week, and the prices are the same as last reported. We quote: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk"

CREAMERY Cans and Trimmings

CREAMERY CANS.

heads, prices quoted on application. "C" brand, 40, 10 and 7½ per cent. off. "Monarch," 60 per cent. and "Peerless," 50 per cent.

HORSESHOES.—A steady demand is noted. We quote: Iron shoes, light and medium pattern, No. 2 and larger, $3.35. No. 1 and smaller, $3.60. snow pattern, No. 2 and larger, $3.60; No. 1 and smaller $3.85; X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.45. No. 1 and smaller, $3.70. feather weight, all sizes, 0 to 4, $5; toe weight, all sizes, 1 to 4, $6.25. Shoes, more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—A small trade is being done for future delivery, and the discounts are quoted as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5 lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—The market is quiet and prices unchanged. Discounts are: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent., full square carriage bolts, 55 per cent., machine bolts, 50 and 5 and 10 per cent.; coach screws, 66 2/3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent., plough bolts, 50, 5 and 10 per cent. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3¾c. per lb. off list, hexagon nuts, 3¾c. per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—A small movement in screws is reported during the week. Quotations follow: Round head bright, 82½ and 10 per cent.; flat head bright, 87½ and 10 per cent.; brass, round heads, 75 and 10 per cent.; brass, flat heads, 80 and 10 per cent.

CORDAGE.—The market is firm and a fair trade is doing. We quote as follows: Pure manila, 14c.; British pure manila, 12c; sisal, 11c.; double lathyarn, 10½c., single lathyarn, 10c.

BUILDING PAPER.—The market is fairly active and the prices steady. Our quotations follow: Tarred felt, $1.75 per 100 lb.; 2-ply, ready-roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 55 per roll; tarred fibre, 60c. per roll, O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN WIRE CLOTH.—There is a steady demand for screen wire cloth at $1.40 per 100 square feet.

FIREBRICKS.—The market is without change. We quote: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—It is a little early yet for the spring trade, and the market is quiet. Our quotations are still as follows: Canadian cement, $1.90 to $2.25; German, $2.20 to $2.30; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel ex store, and American, $2.10 to $2.20 ex cars.

SNOW SHOVELS.—A small movement is reported for immediate delivery. We quote: "Habitant," $2.25 to $2.40; "Victor," 40 per cent. off; steel railroad shovels, 48 and 5 per cent. off.

FIRE SHOVELS.—Discounts are. No. 70, 82½ to 90c. per doz.; No. 55, 55 to 60c.; No. 57, 82½ to 90c.; No. 60, 82½ to 90c.; No. 65, $1.37½ to $1.45, No. 80, 50 to 55c.; "Duplex" No. 7, $1.21; No. 9, $1.72; No. 11, $1.82.

COAL HODS.—Only a small demand is reported, and our quotations are as follows: Japanned, 16 in., $4.50 per doz.; 17 in., $4.80; 18 in., $5.10, with gold band, 17 in., $5.10, 18 in., $5.40. Galvanized, 16 in., $6.20, 17 in., $6.50; 18 in., $6.80 per doz. The discount is 45 per cent.

LANTERNS.—New prices have been issued for a few lines of lanterns. Quotations follow: Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7 per doz.; dashboard, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

METALS.

The scarcity of pig iron is the topic of conversation among the metal dealers this week. One dealer thinks that the closing down of the Hamilton, Ont., furnaces has a great deal to do with the shortage. There is some talk of importing from the United States and Scotland. The copper market in the United States is very firm, and a letter from a New York house says that raw copper cannot be bought for less than 13c. The local market has advanced from 50 to 75c. per 100 lb., and may go still higher. Ingot tin is also about 50c. per 100 lb. higher. The foreign market is about normal and no changes in prices have been reported since our last issue. Canada plates are steady and no further reduction is looked for at present.

BAR IRON.—There is a steady demand and the prices are firm. We quote: Merchants' bar, $2; horseshoe iron, $2.25 and forged iron, $2.30.

BLACK SHEETS.—The market is active at last week's figures. We still quote: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 24 gauge, $2.50; 8 to 20 gauge, $2.50.

GALVANIZED IRON.—Business is quiet in all kinds of galvanized iron, and our prices follow: No. 28, Queen's Head, $4.40; Apollo, 10¾-oz., $4.30; Fleur de Lis, $4.15, Comet, $4.10; "Bell" brand $4.05. For less than case lots 25c. extra is charged.

LEAD PIPE.—A brisk demand continues, with composition and waste quoted at 8c. and ordinary at 7c. The discount is 37½ per cent.

IRON PIPE.—There is a fairly good business doing for spring delivery. We now quote: Standard pipe per 100 feet, in lengths under 19 feet: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1 in., $5.20; 1¼, $7.35; 1½, $8.95; 2 in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.15; ½, $3.85; ¾, $5; 1 in., $7.20; 1¼, $10.05; 1½, $12.20; 2-inch, $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, ½, $4.20; ¾, $5.25; 1-in., $7.55; 1¼, $10.55; 1½, $12.75; 2 in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1-in., $9.55; 1¼, $13.25; 1½, $16; 2 in., $21.90. For threads and couplings, 5 per cent is added. Trade discount, 5 to 7½ per cent.

TINPLATES.—The market is firm. We quote: Coke, $4.25 to $4.50 and charcoals, $4.75 to $5.

SOIL PIPE AND FITTINGS.—A good spring trade is reported during the week.

Discounts are quoted as follows: Light soil pipe, 3 to 6 inch, 50 per cent.; medium and extra heavy soil pipe, 2 to 6 inch, 60 per cent.; extra heavy soil pipe, 8 inch, 45 per cent.; light fittings, 2 to 6 inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.; extra heavy fittings, 8-inch, 45 per cent.

PIG IRON.—The scarcity of pig iron has made the market very unsettled. We quote $23.50 to $24.50 ex store, Montreal.

INGOT COPPER.—An advance of about 50c. per 100 lb. has taken place this week. We now quote $14 to $15 per 100 lb.

INGOT TIN.—The market still shows a tendency to advance. We quote $33 to $33.50 per 100 lb.

PIG LEAD.—We quote, Carlots, $3.10 and less than carlots, $3.25.

STEEL.—There is a steady demand for steel, with the prices firm: Mild, $2.05; sleighshoe, $2.10 to $2.20; tire, $2.15 to $2.25; spring, $2.85 to $3; reeled machinery, $2.75 to $3; toecalk, $2.60 to $2.75; machinery (iron finish), $2.10; mild steel, $2.05; sqdare harrow, $2.15.

TOOL STEEL.—The trade is brisk. We quote: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

CANADA PLATES.—The local market is quite active. Quotations are: 52's, $2.60 to $2.70; 60s, $2.70 to $2.80; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.45 to $4.55.

TERNE PLATES.—The market is firm. We quote $7.50.

COIL CHAIN.—A good movement is reported in coil chain. Quotations follow: No. 6, 11½c.; No. 5, 10 to 10½c.; No. 4, 9 to 9½c.; No. 3, 8 to 8½c.; ¼ in., 6½ to 7c. per lb.; 5-16, $5 to $5.20; 5-16 exact, $5.25; ⅜, $4.25; 7-16, $4; ½, $3.95 to $4.05; 9-16, $3.85 to $3.95; ⅝, $3.65 to $3.75; ¾, $5 to $5.20; ⅞, $3.30; 1-in., $3.15 to $3.25. In carlots an allowance of 10c. is made.

SHEET ZINC.—The sheet zinc market is quiet and the quotations are from $5.75 to $6.

ZINC SPELTER.—A few inquiries have been reported during the past week at $5.25.

SOLDER.—The solder market is brisk at unchanged prices. We quote: Bar solder, 20c. and wire solder, 18c.

SCRAP METALS.

A brisk demand continues in scrap metals and the prices are firm. Copper continues to strengthen, and an advance is looked for in both heavy and light copper. Quotations are: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2¼ to 2⅜c.; iron, No. 1 wrought, $15 to $16; No. 2, $7 per ton; machinery scrap, $16.50 to $17; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6½ to 6¾c. per pound.

HIDES.

Buyers claim that quite a lot of culls are coming in. The market is firm and active, but the prices remain unchanged. We quote: No. 1 hides, 8c; No. 2, 7c; No. 3, 6c. Calfskins, 8 to 10c. and lambskins, 75c.

RAW FURS.

Supplies of most furs keep up fairly well and we hear of no marked scarcity in any line. Prices have not changed, nor does there seem any prospect of their doing so until after the March sales. We quote:

		Large	Medium	Small	Kitts

MONTREAL NOTES.

Ingot copper has advanced 50c during the week.

Ingot tin has advanced 50c since our last report.

ONTARIO MARKETS

Toronto, February 20, 1903

HARDWARE.

THE feeling of optimism which has been noted in recent issues, becomes more pronounced as the season progresses. Orders booked so far have been of larger volume and have been more freely given than even last year. Shipments have so far been largely on Manitoba and the Northwest account, to which points all lines are moving freely. The demand from Ontario and Quebec is of a sorting nature, spring trade having not properly opened, though a good many

forward orders for harvest tools, spades and shovels and cutlery have been booked. Trade in these lines, as far as the manufacturers and jobbers are concerned, is pretty well over. An interesting feature of trade is the exceptional demand for stock for immediate shipment, which seems to indicate unusual building activity all over the country. Prices are firm as a rule. Brass and copper wire rod prices have been reduced 2½ per cent. United States augers and auger bits have again advanced. Lathyarn rope is 1c. per lb. lower. The advances in brushes and woodenware noted last week, are well maintained. No other changes are reported.

BARB WIRE.—Orders are well booked up for the beginning of the season. Prices are unchanged. The base price is quoted as follows: $2.55 from Cleveland and 10c. less in carlots. From stock, Toronto, $2.80.

COILED SPRING WIRE.—Orders continue to come in fairly well, and prices are unchanged, and we quote as follows: No. 9, $2.75; No. 11, $3.40; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlots of 15 tons, 5c. less, with freight up to 20c. allowed.

GALVANIZED WIRE.—A few orders of a sorting nature are reported. Prices are steady. Our quotations are as follows: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE.—A fair demand is noted. We quote the base price as follows: $2.50 per 100 lb. Oiling, 10c.; coppering, 60c. and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—As noted above, the demand for wire nails is a feature of the market. Orders of unusual size have been coming in steadily for the last week or two and from every section. While the prices are firm there is not sufficient fear of advances to cause retailers to stock heavily, so it is taken that even at this mid-winter season building operations are exceptionally active. Quotations are as follows: $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS.—The activity in wire nails has not materially affected the cut nails, which are not moving very freely. We quote $2.50 per keg.

HORSE NAILS.—A moderate demand is noted with prices steady since last week's reduction. Discounts are: "C" brand, oval head, 10 and 10 and 7½ per cent., on "Monarch" 60 per cent. and "Countersunk" head 60 per cent.; on "Peerless," 15 and 7½ per cent.

HORSESHOES.—Business still continues quiet and the prices steady as follows: Iron shoes, No. 2 and larger, light, medium and heavy, $3.45; snow shoes $3.70; light steel shoes, $3.55; feather weight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—A good trade is doing for the season at unchanged prices. We still quote: Flat head bright, 87½ and 10 per cent. discount; round head bright, 82½ and 10 per cent.; flat head brass, 80 and 10 per cent.; round head brass, 75 and 10 per cent.; round head bronze, 65 per cent. and flat head bronze, 70 per cent.

RIVETS AND BURRS.—The demand continues active, and our quotations are as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—A fairly good trade is doing with the prices steady. We quote: Carriage bolts, common (81 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron (83 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2 3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—Orders have been satisfactory, both in point of number and volume, but seem to be about in. Prices are unchanged, and the discount is 45 per cent. and the list price has been reduced $3 per dozen for Olds' good, $2 for Gray's and $1 for Burns'.

ROPE.—Lathyarn is 1c. lower. Other lines are unchanged with some orders being booked and a general interest in conditions being manifested by the trade. We quote: Pure manila, 14c.; British manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3-cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—Orders have been generous, but are now well in. There is no change in the discounts, they remaining at 60 and 10 per cent.

LAWN MOWERS.—A fair trade is doing. Prices are firm. Quotations follow: Woodyatt, 12-inch wheels, $7.50; Star, 12-inch wheels, $5.50; Daisy, 12-inch wheels, $4.90; Philadelphia, 10-inch wheels, $6; Ontario, 10 inch wheels, $12.75. The other prices are in proportion.

BRASS AND COPPER WIRE.—The discounts have been reduced 2½ per cent., now being 60 off. This advance in prices is attributed by manufacturers to the advance in brass and copper wire rods.

AUGERS AND AUGER BITS.—The United States makers of these goods have steadily pushed prices upwards until they are now 20 per cent. higher than they were on January 1. The local jobbers have followed the makers' advance.

BUILDING PAPER.—The probability of another advance has encouraged buying. Prices are as follows: Dry sheathing, grey or straw, 10c. per roll; tar sheathing, grey or straw, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll.

RANGE BOILERS.—The demand is not as active as it was, but is still good. The prices are steady and are as follows: 18 and 30 gallon, $6; 35 gallon, $7; 40 gallon, $8; 52 gallon, $12.50; 63 gallon, $19; 82 gallon, $23; 100 gallon, $31, and 120 gallon, $37.

STOVES AND TINWARE.—Interest is taken in summer lines, but business is not expected to open for a short while yet.

BRUSHES.—The advance, or rather the reduction of discount, is well maintained. A fair business is doing.

SCREEN DOORS.—It is anticipated that trade in this line may be of small volume this summer as, on account of the cool summer last year, considerable stock was carried over. We still quote: Screen doors, common, two or three panel, walnut stained, 4-in. style, $6.80; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3-inch style, 20c. per dozen less.

CEMENT.—The demand is still increasing, and prices are firmly maintained. We quote as follows: Canadian Portland, $2.40 to $2.50; hydraulic, $1.35 per bbl.

METALS.

Business continues in a very satisfactory condition. The demand is well distributed and aggregates a much larger volume than last year. A feature of the market is the difficulty of getting iron pipe, the stocks of which in local jobbers' hands are small. Owing to the larger demand all over the States and to the difficulty of getting fuel and transportation, the United States manufacturers of iron pipe are not able to fill orders as promptly as their customers would desire. Copper and tin are higher on the outside markets, and both are 1c. dearer here. Iron and steel prices are firmly held.

PIG IRON.—Though the production and offerings are larger, prices are stiff throughout. Quotations follow: $23 to $25 for No. 1 and $22.50 for No. 2 at the Canadian furnaces. No. 2 Summerlee is quoted at $25 on track, Toronto.

STEEL BOILER PLATES.—We quote $2 per 100 lb. at Pittsburg.

TOOL STEEL.—There is an excellent movement, with prices firm. We quote: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 11c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8c. to 9c.; Park's "Silver," 12 to 14c.; Park's Special," 15 to 20c.

MILD STEEL.—Prices continue steady. We quote $1.90 per 100 lb. at Pittsburg and $2.75 per 100 lb. on track, Toronto.

SPRING STEEL.—No change, and we quote $3.50 per 100 lb. on track, Toronto.

BAR IRON.—The firm feeling continues with a good demand noted, and we quote the base price as follows: $2.05. Extras cut to length while rolling: 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft., by special agreement, according to length and size.

BLACK SHEETS.—The demand continues excellent. Prices are steady and we quote: Common, $3.15 for 28 gauge and dead flat, $2.50 for 26 gauge.

CANADA PLATES.—Orders for import are being freely booked. Quotations are: All dull, $2.90 to $3; half polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—A good and steady demand is recorded. Stock prices keep steady and are as follows: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—The demand has improved, but buyers are purchasing from hand-to-mouth. The outside markets advanced early in the week, and the local market has followed to the extent of $1 per 100 lb. We quote $32 to $33 per 100 lb.

TINPLATES.—A good business is being done. The local market has not yet followed the advances in England. Prices follow: Charcoals, $4.75 to $5 and cokes, $4.25 to $4.50 per box.

COPPER.—Ingots continue in good demand and are $1 higher as a consequence of the higher English quotations. We

quote as follows: Ingot copper, $13 and sheet copper, $22 to $23 per 100 lb.

BRASS.—Unchanged. The discount is 15 per cent.

LEAD.—There is a good movement. The prices are unchanged at $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE.—The demand keeps excellent. The manufacturers are having great difficulty in filling orders, as the producing capacity of all the works in Canada and the United States has not increased as rapidly as the consumption. Two causes of this has been the scarcity of fuel and the difficulties of transportation. Prices steady. We quote per 100 ft. Black pipe, ¼ in., $3; ⅜ in., $2.30 to $2.40; ½ in., $2.65; ¾ in., $2.85; ⅞ in., $3.65; 1 in., $5.20; 1¼ in., $7.35; 1½ in., $8.95; 2 in., $12.55; 2½ in., $20 to $21; 3 in., $24 to $25; 3½ in., $30 to $32; 4-in., $37.50 to $38.

ZINC SPELTER.—The activity continues. We quote 5 to 6c. per lb.

ZINC SHEETS.—There is an excellent demand. Prices are steady. We quote the base price as follows: Cask lots, $6 to $6.25 and part casks, $6.25 to $6.50.

SOLDER.—A better inquiry. The prices are steady at 20c. for guaranteed half and half, and at 17 to 18½c. for wiping.

ANTIMONY.—Business is in small lots. The price is steady at $9 per ton.

PETROLEUM.

The market is easier with the demand rather smaller than a week ago. The Union Petroleum Co.'s prices are as follows: Lily White, Canadian, 18c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less.

OLD MATERIAL.

Prices are well maintained, but receipts are not as large. Quotations are as follows: Heavy copper and wire, 10½c. per lb., light copper, 8 to 8½c.; heavy red brass, 9½c.; heavy yellow brass, 7½ to 8½c.; light brass, 5 to 5½c.; lead, 2 to 2¼c.; scrap zinc, 3c.; iron, No. 1 wrought, $14 per net ton; No. 2 wrought, $4.50; machinery cast scrap, $15.50 to $16; stove plate, $10; malleable and steel, $6 to $6.50; old rubbers, 6½c. per lb. and country mixed rags, 50c. per 100 lb.

FOREST CITY GOSSIP.

Office of "Hardware and Metal."

London, February 19, 1903.

THE more one gets around the manufacturers of hardware and metal goods, the more do they open our eyes in pleased surprise at their number and importance; the more do we ascertain of the number of busy employes, and of the vast capital invested in this truly industrial centre.

* * *

There's a courtesy, too, and it has been everywhere extended to your representative, a courtesy that is born of common sense and good breeding, that stamps the managers and directors of these London concerns as business men and not snobs; men whose heads are level, and who are always willing to talk business in business style.

* * *

There's an active business, too, all around these factories, and prices are well maintained. The regular wholesale and retail hardware trade have nothing to complain of, and prices remain much the same as during last week. One jobber, in oils and paints, stated that because of the continued high figure at which turpentine is now sold, benzine, which is only a fraction of the price, is quite largely taken as a substitute.

* * *

The Columbia Handle Co., of London, are finding themselves in a very hard and difficult position lately, causing them to hold in their horses, and almost put a stop in some departments of their output, and this has not arisen, as in the case of some other industries, from shortness in the coal supply, but from something to them of even more weighty and serious importance. It appears that the hardwoods, principally white ash, are timbers much used in the manufacture of handles, and as the woods and forests are now almost depleted of this sort, and as yet no substitute has been found, they are finding themselves up against a hard proposition. An English firm of high standing wrote them recently that of their goods they want three carloads every month. It is certainly very tantalizing that owing to shortness of the necessary timber only one carload every two months can be exported.

* * *

The Cold Storage Company have re-elected Thomas H. Smallman as president. The other officers of the company also re-elected, are: Vice-president, M. Masuret; manager, C. R. McDuffie; directors, John Labatt, R. W. Puddicombe, J. S. Niven, Isaac Waterman and W. J. Reid.

* * *

The hydraulic pumps ordered for the London waterworks are now at the Springbank pumping station, ready to be set up, and once the permission is given to instal the machinery, the work will be rushed forward and finished in a month or six weeks. The new hydraulics will pump 1,000,000 gallons daily, or double the amount available with the old ones. There is also a smaller pump constructed solely for the lower Colville springs, which yield 100,000 gallons per day. This will mean that where the old pumps yielded 2,000,000 gallons per day at the most, the new plant can pump 4,400,000 gallons daily.

* * *

The surplus of receipts over the expenditure in London, Ont., for the last year in the civic departments was $2,661. This result is very pleasing to the friends of Mayor Beck, and last year's council, who struck half a mill from the rate of taxation and still have something left.

* * *

The St. Thomas, Ont., Journal publishes a picture of George Brasher, Mayor of Tillsonburg, Ont., together with a biographical sketch, in which it is stated that Mr. Brasher was born in Prescott, Ont., in 1834, and began work as a telegrapher operator there when only 12 years of age. He is now engaged in the mercantile business.

* * *

The great scarcity of fuel during last fall and winter seems to have roused more than one of the Western Ontario towns to the necessity for correct measuring of wood, and the weighing of coal. Ald. McKenzie, of Woodstock, proposes to put through the next meeting of the city council, a by-law, compelling all wood for sale in city limits, to be first brought to the market, classified, and measured by the clerk. In Chatham, J. L. Scott,

ion of the [illegible] $100 towards a system of sprinkling and on the city scales and paying a competent man there to see that it is properly done.

The unusual mild weather of this week has compelled many merchants and house keepers to set their fires up again, in spite of having these gradually empty with a feeling toward the advent of warm temperature.

W. H. L.

NOVA SCOTIA MARKETS

Halifax, February 19, 1903.

THERE is more activity in the hardware business this month than is usual at this season of the year, and all firms are kept constantly busy. The travellers on the road are sending in a number of orders for immediate delivery, and at the same time still larger orders for spring delivery. Everything now indicates a busy season in the hardware line, consequent on large building and other operations contemplated in many parts of the Maritime Provinces and other territory covered by the travellers for the city firms. Payments since the first of the year have been fairly well met and there is a buoyant and hopeful feeling in hardware circles which argue well for the current year's business.

* * *

The prediction that $1 would be the quotation on turpentine seems now to be fairly open to fulfilment, as 95c. was booked up last week. The rise in turpentine also affects varnish and other commodities which require it in manufacture, and unless something new opens up in the situation there will be much higher quotations all around, which will seriously affect contractors who have figured on the nominal prices. Linseed oil is also firm and liable to advance in sympathy with turpentine. Only limited stocks are held here.

* * *

Builders' materials are firm and heavy orders are being booked. Putty is now quoted higher: In bbls., 100 lb. and over, $2.10; 100 to 200 lb. kegs, $2.25; in bulk, 800 lb. and over, $1.80. Considerable builders' materials were shipped last week to Newfoundland by the ss. Glencoe. There will be a considerable revival in shipbuilding this season, which, besides the ordinary demand, will create a large demand for canvas and cordage. The ss. Evangeline, which arrived from Liverpool last week, brought a large quantity of hemp for Ontario mills.

* * *

A meeting of the Maritime Foundry Association was held in this city on Thursday, February 12. Those present were Charles Fawcett, Sackville, N.B.; William Knight, Amherst, N.S.; J. C. Rockwell, Lunenburg, N.S.; W. S. Fisher, St. John, N.B.; A. E. Wall, Wolfville, N.S.; H. S. Crowell and F. H. Wilcox, Yarmouth, N.S.; James F. Hills and Frank Hills, Halifax, N.S. James F. Hills is president; C. F. Fawcett, vice-president, and W. S. Fisher, secretary of the Association. The meeting was called for the purpose of considering the advisability of an increase in foundry products. A long session was held and the matter was fully discussed in all its bearings. The result was that a general advance of 5 per cent. was decided on in stoves, ranges, furnaces, etc.

R. C. H.

SELF-MEASURING OIL OUTFITS.

The element of waste enters so very largely into the handling of oil and gasoline that any device that will prevent this waste should be welcomed by all users of oil, and will prove a most profitable investment. The self-measuring oil tank, described in our advertising page, is manufactured by S. F. Bowser & Co., Fort Wayne, Ind. The illustration shows a cellar outfit for handling all kinds of oils. The pump measures a correct gallon, half-gallon or quart at each stroke, and deposits the oil directly into the consumer's can without the use of measure or funnels. A discharge register tallies the number of gallons drawn, and so keeps track of the transactions. It is complete in every respect, no detail having been overlooked that would tend to its improvement or durability or to the convenience of the operator. In addition to the style shown above, Bowser & Co.'s catalogue shows more than 50 other styles. Any one addressing S. F. Bowser & Co., Fort Wayne, Ind., and asking for Catalogue A, will receive the catalogue and full detailed information in reference to the outfits.

Window and Interior Displays

Timely Hints and Suggestions.

THE NEW IDEA OF WINDOW DRESSING.

THE elaborate, time-consuming display is fast passing away. The recent holiday displays clearly show this to be a fact. In New York, stores that for years have depended on the costly and elaborate trims from which to draw custom, have this year been content with plain, neat, business shows, where the merchandise was the chief feature in attracting attention. There are many reasons for this change. One is economy. Another is that more frequent changes are needed nowadays. People tire of a trim, and it loses its business bringing feature after three or four days showing. One merchant says (and we think his ideas are not far wrong) that the window display that is required today, to be in keeping with the best trade, is the one where all "side-show" ideas are absent and where the display is made artistic by its simplicity and neatness. In other words, the displays that talk business, that present a silent argument, designed to influence the onlooker towards purchasing the goods on display.

Merchants are sick and tired of the old spectacular show, designed to show the cleverness of the decorator rather than the merits of his employer's goods. Many trimmers in the smaller cities still adhere to the "loud," "yellow" display. They spend two or three days on a display that will catch a crowd and perhaps block the sidewalk; but the main idea of window-dressing is lost sight of in such a display, and the window fails in its purpose, viz.: to get customers into the store to purchase. Another merchant told me that he would rather have one window display that would be the means of bringing a dozen customers in to purchase, than to have 20 displays of the spectacular sort that block the street but do not tempt the public to buy. And who could dispute this statement. There are lots of people on the street at all times of the day who like to be amused and have their curosity aroused, but, as a rule, they are not the buying public. To sum up the question, I can safely say that everything points to a revival in the line of window decoration, and the plain, artistic, display, where the merchandise is the only feature, is the display that is required now by the best merchants in the country.

This does not necessarily follow, however, that the window dresser who has been getting "big money" for putting in these spectacular trims is going to suffer in consequence of the "revival." He is not. His services are always in demand at a good salary. Under the new system he has just as much headwork to do; and, in fact, it requires more artistic ability to put in a simple, high-class display than was required for the elaborate trim. His displays are changed twice as often under the new idea than under the old. His duties are increased, if anything. In comparing the two systems, the new one is the one under which the high-class trimmer can feel that he earns his salary, by constantly keeping in mind that he is employed to show goods in the best possible way towards affecting their sale.

PREPARE AHEAD.

ANYTHING that is worth doing is worth doing well. Every retailer will admit that he should have a show window and have an exhibition of something in it; but too frequently it is regarded as a necessary evil, that must be disposed of in the quickest and cheapest possible manner. This is a great mistake. Good window-trimming cannot be obtained by trying to work on the inspiration of the moment, any more than an architect can build a house without first making out his plans. A man, to trim his window well, must give careful thought and study as to the material to be used and the way of using it. Before a thing is taken out of the window for a redressing, there should be a definite idea of what is to replace it. You may not follow your plans just as you originally intended them to be, but, at least, you will be able to redress your window in a much shorter time and to a greater advantage. Extra forms or stands for draping should be ready to put in the window the moment the old display is taken out. In this way the window is vacant only a short time, and you are thus able to get the most benefit out of the display.

MAKE HARDWARE STORE WINDOWS ATTRACTIVE.

The opinion that window displays are primarily to attract attention, says an exchange, is only half right. A live monkey might attract attention to a store, but would it sell refrigerators? A display's most important function is to call attention to the fact that certain lines are carried. Further, it may tend to create a want.

Neat, serviceable fishing tackle or easy appearing hammocks will often cause a person who had no previous intention of procuring such articles to come into the store and make a purchase. An exhibit of nails and barb wire would be of little value, because it is taken for granted that a hardware store sells both.

But there are many things in a hardware store about which the average customer does not know. Should he be in need of such he will be at a loss unless he learns through displays or other advertisements where those articles are on sale. For example, if a man wants a chandelier and does not know just where to go for it, the first stors he sees displaying chandeliers will probably sell him. Avoiding staples, we should fill our windows with novelties, lines frequently not carried by hardwaremen and goods which sell only during a certain season of the year.

The last requisite of display is that it makes a good impression. To do this only one line of goods and only the best grade of that should be shown. A window full of cheap cutlery might cause quite a run on those articles, but would do so at the expense of the store's reputation. Suppose a stranger in town should want to buy a set of tools and be referred to a store making such a display, would he not think "That is the place where I saw those bargain knives?" And would he not also think that if the knives were cheap the tools would be the same?

In addition to advertising the lines exhibited a window display should benefit the whole store. If the best goods are used, if the arrangement is such that they are shown to the best advantage, and if the window, as a whole, is neat and clean, this will be the result. If not, the window display has fallen short of the usefulness it should possess.

Chester Sitlington, who has been in Fuller Bros'. hardware store, Forest, Ont., for a number of years, has gone to London, Ont., where he has secured a position in D. Howden & Company's wholesale store. Chester was very popular in Arkona, and his many friends will be pleased to hear of his promotion.

PAINT, OIL AND BRUSH TRADES

PAINT FIRMS AMALGAMATE.

A MEETING of the directors of The Hollywood Paint Company, Limited, Toronto, was held on February 13. Charles J. McLennan, president and general manager of The McLennan Paint Company, of Buffalo, N.Y., purchased an interest in The Hollywood Paint Co., which in future will be under the management of The McLennan Paint Co.

It is the intention of The McLennan Paint Co. to manufacture and market their products in Canada. The Hollywood Paint Co. will, therefore, become their medium. Under this arrangement, the Hollywood Co. will be strengthened materially and The McLennan Paint Co. will find an outlet for their products.

The McLennan Paint Co. own and operate one of the largest manufacturing industries in America. The growth of their business has been unusual. Their specialties are agricultural implement paints, and with those of The Hollywood Co., there is no doubt that the new combination will build up a strong business in Canada. The business of The Hollywood Co. has developed very rapidly since their organization. The directors of the latter company are men of repute and business ability. The consolidation of the interests involved will form a very

The following gentlemen will be interested in the management of the amalgamated concern: C. J. McLennan, president, The McLennan Paint Co., Limited, Buffalo; Seneca Jones, manager, Canadian Millers' Mutual Fire Insurance Company, Hamilton; C. F. Grantham, general manager, Imperial Cotton Co., Hamilton; W. H. Kestin, secretary-treasurer, The McLennan Paint Co., Limited, of Buffalo; H. P. Coburn, vice-president and general manager, Sawyer-Massey Company, Limited, Hamilton; James Thomson, Gartshore-Thomson Pipe and Foundry Co., Limited, Hamilton; F. A. Lane, general superintendent, The McLennan Paint Co., Limited, Buffalo; Norman S. Jones, director, Dominion Bolting Company, Limited, Hamilton.

A PROGRESSIVE PAINT FIRM.

The Globe Paint Co., 122-124 Adelaide street west, Toronto, are among the paint manufacturers who are making a strong bid for trade this spring. This company have been in business in Toronto for eight years, during which time they have proved the contrary of the old saying, "A prophet is not without honor in his own country," as they have built up a remarkable good business in that city. Like all other progressive firms, however, they are not satisfied with city trade only, but are looking for business in every part of the Dominion, and already enjoy the patronage of a number of leading hardware merchants throughout the country. Their paints have always enjoyed a reputation for quality, and this has doubtless been one of the secrets of their success. For richness of color and durability their brands are well known. They manufacture a splendid line of house and coach colors, etc. Their efforts will doubtless be rewarded with a share of the paint business that is going.

FOR COLLECTING TURPENTINE.

Dr. C. H. Herty, of Athens, Ga., has patented gutters and cups for an improved method of collecting crude turpentine. This method has been tested in detail by representative turpentine operators, and has been found to secure a larger yield and better quality of gum than was secured in the usual way. Dr. Herty is now at Thomasville, Ga., with a force of Government experts, placing his method on the turpentine farms of operators in that State, Florida and Alabama. More than 5,000,000 trees, it is said, will have Herty gutters and cups on them before the spring is over. For the past 18 months Dr. Herty has been conducting his work under the supervision of the United States Government Department of Forestry.

PAINT AND OIL NOTES.

The Ontario Linseed Oil Co. has purchased property on Water street, Owen Sound, Ont., and is preparing plans for a building, the contract of which will shortly be let. The capacity of the factory will be about 1,000 bushels of flaxseed per day. The factory is expected to commence operations next fall.

At a convention in Richmond, Va., the National Association of House Painters and Decorators decided to hold their next meeting in Toronto. Stewart N. Hughes, of Toronto, was elected a member of the executive board of the Association, the President of which is W. J. Edwards, of Massachusetts.

PAINT AND OIL MARKETS.

MONTREAL.

Owing to travellers being detained by stormy weather and the irregularity of the mails, the past week was not as brisk as desired for the month of February. There seems to be a keen inquiry for ground white lead, and some grinders have difficulty in keeping up with the demand. The big price of turpentine, which is quoted at 95c. per gallon this week by the barrel, and $1 per gallon has been asked for small lots, which is the highest figure on record for nearly 40 years, is becoming serious in the manufacture of varnishes, and it is thought that an advance of 10c. should be placed on all kinds of varnishes and japans. Benzine has advanced about 6c. during the last two weeks, in sympathy with the turpentine market. Business generally, is good, but the cold weather is holding spring orders back somewhat. We quote:

GROUND WHITE LEAD.—Best brands, Government standard, $5.00 to $5.25; No. 1, $4.27½ to $4.87½; No. 2, $4.40 to $4.50; No. 3, $4.02½ to $4.12½; No. 4, $3.65 to $3.75 all f.o.b. Montreal. Terms, four months, or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—$5 in casks, and in kegs, $5.25.

DRY WHITE ZINC.—Pure dry, in casks, 6¼c.; in 100-lb. kegs, 6¾c.; No. 1, zinc, in casks, 5¼c.; in 100-lb. kegs, 5¾c.

WHITE ZINC (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

PUTTY.—We quote: Bulk, in barrels, $1.80 per 100 lb.; bulk, in less quantity, $1.95; bladders, in barrels, $2.10; bladders, in 100 or 200-lb. kegs or boxes, $2.25; in tins, $2.20 to $2.50; in less than 100-lb. lots, $2.75 f.o.b., Montreal, Ottawa, Toronto, Hamilton, London and Guelph. Maritime Provinces, 10c. higher, f.o.b., St. John and Halifax. Three per cent. discount for cash in 30 days.

ORANGE MINERAL.—Casks, 7c.; 100-lb. kegs, 7¼c.; smaller quantities, 8¼c.

RED LEAD.—Genuine red lead, in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities, $5.75 per 100 lb. No. 1 red lead, casks, $4.25; kegs, $4.50 and smaller quantities, $5.50.

LITHARGE.—Ground, casks, 5c.; less quantities, 5½c.; flake litharge, casks, $5.25; smalls, $5.75 per 100 lb.

LINSEED OIL.—Raw, 1 to 4 barrels, 59c.; boiled, 62c.; raw, 5 to 9 barrels, 58c.; boiled, 61c. Terms, net cash in 30 days. Delivered in Ontario, between

Painters all like "ARK BRAND" Paint.

That's because it spreads easily and smoothly, it does not crack, chalk or peel, it comes in full measure cans, and makes their work satisfactory.

Then again, they know it is a pure lead, zinc and oil paint, ground by the only perfect process, making an absolutely honest paint.

Dealers will find that "Ark Brand" will appeal to the painters and that it is a most profitable line to carry.

Write us for our prices and the booklet, "Paint: What to Use, and how to Use It."

The biggest Week

We have had many big weeks already this year, but we opened more exclusive agencies last week than ever before. Some of the dealers were carrying two other brands but HOLLYWOOD takes the place of both.

HOLLYWOOD PAINT

has all the good features of the others and many advantages exclusively its own. We can write you an interesting letter.

HOLLYWOOD PAINT CO., Limited,

HAMILTON, ONT.

Montreal and Oshawa, at 2c. per gallon advance.

TURPENTINE.—Single barrels, 95c.; 2 to 4 barrels, 94c. Terms, net cash in 30 days.

BENZINE.—25 to 37c.

SHELLAC VARNISH.—Pure white, $2.35 to $2.45; orange, $2.25 to $2.35.

MIXED PAINTS.—$1.20 to $1.40 per gallon.

CASTOR OIL.—8¾ to 9¼c. in wholesale lots, and ½c. additional for small lots.

SEAL OIL.—48 to 50c.

COD OIL.—35 to 37½c.

PURE CANADIAN PARIS GREEN.—Petroleum barrels, 13¼c. per lb.; arsenic kegs, 13½c.; 50 and 100-lb. drums, 14c.; 25-lb. drums, 14½c.; 1-lb. packages, 15c.; ½ lb. packages, 17c.; 1 lb. tins, 16c.; ½-lb. tins, 18c.

PURE ENGLISH PARIS GREEN.—Petroleum barrels, 14¼c.; arsenic kegs, 14½c.; 50 and 100 lb. drums, 15c.; 25 lb. drums, 15½c.; 1 lb. paper boxes, 16c.; 1-lb. tins, 17c.

TORONTO.

For the first time since the beginning of the year the market has continued for a full week without change in quotations. Turpentine seems to have reached top prices and last Friday's 2c. advance is not likely to be followed by a further raise. Linseed oil is stationary in England and firm here. White lead is unchanged in quotations, but there is some talk of underselling. There is a good sorting demand. The general opinion seems to be that the volume of trade is larger than a year ago, but in one quarter, it is claimed, that there is little difference between the size of orders this year and those of last spring. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5 to $5.25; No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½.; No. 4, $3.50 to $3.75 in packages of 25-lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. pkgs.; genuine dry white lead in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.50; ditto, in kegs of 100 lb., $5; No. 1, in casks of 560 lb., $3.75; ditto, in kegs of 100 lb., $4.25.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In 5-gallon lots, 60 to 75c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb.; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c. per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.25 to $2.35; white, $2.35 to $2.45 per gal.; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8½c. per lb.; cabinet glue, in bbls., 12c.; emery glue, in bbls., 17½c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.10; bladders, in 100 lb. kegs, $2.25; bulk in barrels, $1.80; bulk, less than barrels, and up to 100 lb., $2.05; bladders, bulk or tins, less than 100 lb., $2.75.

PARIS GREEN.—Petroleum bbls., 14c. per lb.; arsenic kegs, 14½c.: 50 and 100 lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. packages, 16c.; ½-lb. packages, 18c.; 1-lb. tins, 16c.; ½-lb. 18c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 9 to 9½c. per lb., and 10 to 10½c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 95c.; 2 to 3 bbls., 94c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

GASOLINE AND BENZINE.—We quote as follows: Benzine, 19¼c. and gasoline, ordinary, 21¼c. and engine, 22¼c. f.o.b. Toronto.

WINDOW GLASS.

MONTREAL.

The local trade has somewhat improved during the past week, but the outside business is as yet very quiet. The prices remain unchanged. Quotations are as follows: First break, 50 feet, $2; second, $2.10 for 50 ft.; first break, 100 feet, $3.80; second break, $4; third break, $4.50; fourth break, $4.75.

TORONTO.

There is a good demand with prices firm in view of an advance of four points in Belgium. Ornamental glass, on the other hand, is lower, the discount having been increased 5 per cent. Quotations follow: Star, Under 26 in., $3.80; 26 to 40 in., $4; 41 to 50 in., $4.50; 51 to 60 in., $4.75; 61 to 70 in., $5; 71 to 80 in., $5.50. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days.

The Point Edward Elevator Company, Limited, have been incorporated under the Ontario Companies' Act, for the purpose of erecting and conducting a grain elevator at Point Edward, Ont. The provisional directors are: Thos. Long, Toronto; J. J. Long, Collingwood; D. S. Lasier, Chicago; J. J. Laiser, Chicago; and F. Mooers, Kingston.

LIQUID HOUSE PAINT.

If you desire to increase your paint trade you will have to supply your customers with the best Ready-Mixed Paint obtainable.

"ANCHOR" LIQUID PAINT has no equal on the market, the white lead used is the best the world can produce—**BRANDRAM'S B. B. GENUINE.**

It has been giving satisfaction for more than a quarter of a century, and is still forging forward.

Established 1874.

HALIFAX and MONTREAL,

ANNUAL EXHIBITION FOR MONTREAL.

THERE is every prospect that Montreal will again have annual fall exhibitions after a lapse of some four years. The project was no sooner announced than it found many endorsers among the best known business men of the city, and the first steps have already been taken toward materializing the ideas of those interested in it.

At the meeting in the City Hall when the subject was discussed, it seemed to be the prevailing impression that Montreal should be able to accomplish as much in this way as Toronto has done for years, notwithstanding that Mr. Robert Monro, of The Canada Paint Co., and a past president of the Canadian Manufacturers' Association, thought that the Ontario capital had a decided advantage over Montreal in being surrounded with several cities and large towns from which visitors could be drawn to the exhibition in crowds. He pointed out also that it was only in the special features of the Toronto Exhibition that it was financially a success; that the agricultural displays were a minor feature in the eyes of visitors. Mr. Munro's remarks were partially endorsed by Mr. Charles Chaput, who stated that in former Montreal exhibitions there was a lack of both visitors and exhibitors, which was the reason for their failure.

J. X. Perrault, however, thought that Montreal was even more favorably situated than Toronto, in that many more American visitors could be brought there than to the western city. Cheap railway rates would be required, and all the commercial interests of the city should take a part in placing the new company on a sound foundation. With proper management he felt sure of the success of the exhibitions.

Several other speakers were heard in favor of holding annual exhibitions, among them Henry Miles, representing the Business Men's League; Hon. J. I. Tarte, who was confident of success if the proposed organization were placed on a purely business basis, and Ald. Ramarche. The last mentioned gentleman considered that even if the exhibitions were at first only self-supporting they should be counted a success.

It was finally decided that the idea of holding exhibitions should be approved of, and to appoint committees to carry out the scheme along the lines of the Toronto Exhibition. The committee appointed was: Hon. F. L. Beique, Hon. L. J. Forget, Mayor Cochrane, Hon. J. D. Rolland, Hon. H. B. Rainville, Ald. H. Laporte, Geo. E. Drummond, R. Wilson-Smith, T. H. Gauthier, Henry Miles and J. X. Perrault.

From these names it will be seen that the enterprise has behind it no lack of business ability and sound judgment, as the committee includes the most capable men in Montreal, representing various important commercial interests of the city and province.

TRADE OUTLOOK IN NEWFOUNDLAND.

The average citizen is more concerned now about the industrial outlook than the varying phases of political existence. The promise of the coming season is most gratifying. In lumbering, mining, and manufacturing, there is a better prospect than ever before. Mercantile activities are increasing, corporate enterprise is manifesting itself, rich and poor seem assured of a prolonged period of well-being. The trade statistics of the colony for some years past show a most healthy growth, and there is no reason why this should not be maintained to an even greater degree in future.—Herald, St. John, Nfld.

DEATH OF A WELL-KNOWN HARDWAREMAN.

Mr. Joel C. Baker, for many years a well-known hardwareman of Montreal, died on February 11 in that city. He was a member of the firm of Mulholland & Baker, and was an indefatigable worker toward the betterment of the commercial interests of the city.

Mr. Baker was first a lawyer by profession, being a partner of the late Sir John Abbott, but shortly after his marriage with a daughter of the late Mr. Wm. Workman, son of the founder of Frothingham & Workman, he entered the hardware business. He was a frequent contributor to the press, writing under the nom de plume of "Jacob Kalleper." Hon. Geo. B. Baker, of Sweatsbury, was a brother.

The funeral took place on Friday, February 13, from the family residence to the Church of St. James the Apostle. A great number of mourners followed the remains to the cemetery, among them many well-known figures in the commercial circles of Canada.

Ex-Alderman Chas. Clarke, Woodstock, Ont., died suddenly of heart failure at his home early in the morning, February 11. The deceased was a well-known resident of Woodstock, having come to that town 24 years ago. He was first in the grocery business with his brother, Oliver Clarke, but afterwards he became a partner in the hardware firm of Broditch & Co., where he remained until some six years ago, when he retired.

To Preserve and Beautify.

To meet the demand for a Varnish which will give a smooth hard finish and enhance the beauty of the surface upon which it is applied and for general purposes, **THE CANADA PAINT COMPANY** have introduced the Universal "Sun" Varnish. It is a hard copal Varnish, made only by themselves from selected clear bright gum and is thoroughly matured and tested before being passed into stock for shipment. It is suitable for all purposes where Varnish is used, inside or outside.

The "Sun" Varnish may be applied with every satisfaction to outside doors, boats, buggies, wagons, and where durability is required.

"I will have the Sun or I will have none."

For interior work the "Sun" is especially valuable for furniture, church seats, inside blinds, bath rooms, oilcloth, etc., etc. A floor varnished with "Sun" Varnish is sweet and wholesome.

The "Sun" Varnish is brought to such a state of perfection that it may be used with the greatest confidence.

The "Sun" is put up in half-pints, pints, quarts, half-gallons, gallons. (Imperial measure).

Directions for use upon every package.

HEATING AND PLUMBING

THE FUTURE OF GAS LIGHTING.

ON Monday night Professor Vivian B. Lewes, professor of chemistry at the Royal Naval College, Greenwich, and chief gas examiner to the City of London Corporation, delivered the closing lecture of a series entitled "The future of coal gas and allied illuminants," arranged for by the Society of Arts, London, says Ironmonger. Professor Lewes stated in his lecture that for the incandescent burner a gas of high candle power was not required—only a gas that had enough heating power to raise the mantle to the proper degree of incandescence. Indeed, to use a gas of high candle power with burners was simply a waste of money. He thought a gas of about 12-candle power and with a heating value of about 460 British thermal units would be the best gas to supply in the future. In his second lecture he described a method by which such a gas could be made and sold at probably about 2s. per 1,000 cubic feet, at which price, he stated in the third lecture, the use of gas for cooking, for heating, and for gas engines would develop rapidly. In the concluding lecture, Professor Lewes dealt with the allied illuminants, namely oil and acetylene, both of which, he said, had undergone great developments within the last few years. In regard to oil, he said the Kitson system of lighting, in which a mantle was employed in connection with a non-luminous oil gas flame, gave a light equal to 1,000 candles at a cost of a penny per hour. With regard to acetylene, he said this gas could be dissolved in acetone, and in this way 100 cubic feet of the gas could be compressed into one cubic foot of cylinder space, and that in this form the gas was admirably adapted for train, tram and omnibus lighting. He also showed that with this compressed acetylene, in conjunction with the incandescent mantle, a light of 146 candles per cubic foot of gas could be obtained.

PLUMBING AND HEATING NOTES.

The Sisters of Mercy, Ottawa, will erect a $70,000 hospital. Charles Brodeur, Hull, is the architect.

Hutchinson & Wood have prepared plans for a new business block for E. N. Renouf, at the corner of University and St. Catherine streets, Montreal. It will be seven storeys high, fire-proof and modern in every particular.

E. L. Martin, of Martin & Kirk, Sydney, N.S., is on a business trip to New York. When he returns he will open up in the plumbing line in Sydney, where he is favorably known.

The Canadian Heating and Ventilating Co., Owen Sound, Ont., is about to purchase a site for its factory. This extensive factory, when completed, will be a great acquisition to the town.

The Hamilton Journeyman Plumbers' Union held their first annual banquet on Friday evening last, 60 members and guests being present. President Fred Staunton occupied the chair. The Master Plumbers' Association was represented by President George Stevenson, and the manufacturers and supply houses by Robert Young. The meeting was harmonious and satisfactory in every respect.

THE OTTAWA PLUMBING BY-LAW.

The Ottawa Board of Health have recommended that the plumbing by-law be rescinded. Many aldermen are opposed to such action. On motion of Ald. Askwith a committee composed of Alds. Enright, Cleary, Hopewell, Davidson and the mover were appointed a committee to revise the by-law.

BUILDING NOTES.

Plans have been approved for the new boiler works and foundry near the police station, Vancouver.

Plans are under way for an elevator at Point Edward, Ont., to replace the one burned five years ago.

The Grand Trunk is to build a handsome new station at Brantford, Ont. A new station has also been built at Fergus.

Capitalists backed by the Warings of London, Eng., are examining the conditions at Ottawa, and may erect a large, modern hotel in that city.

A new market, to cost about $30,000, is to be built at Charlottetown, P.E.I. Plans have been prepared by W. C. Harris, C. B. Chappell and John P. Nichol.

E. J. Lennox, architect, Toronto, has prepared the plans for The Toronto General Trust Company's office building, which will be eight storeys high and will be fitted in modern style.

KITCHEN VENTILATION.

IN seeking the cause for the proverbial crossness and ill health of cooks generally, the blame is attached to the bad lighting, overheating and poor ventilation of the kitchens in which they spend so much time, says the Metal Worker. While it is probable that professional cooks were under consideration when this subject was discussed, there is no doubt that the defects mentioned often apply with equal force to the home kitchen, and it is possible that those who equip such kitchens could improve the conditions with profit to themselves and the occupants. The stove dealer and tinsmith are occupied no small part of their time in catering to this part of a dwelling, and they should use their influence and trade knowlege along this line.

They should point out that the cooking apparatus ought to be placed where the cook will not only have a good light on the work, but can also have the diversion of a change of scene and the relief afforded by a nearby window. Such a window can be used with excellent advantage for the escape of excessive heat and for ventilation. Consequently the proper location of the cooking apparatus should be pointed out to architects, builders, carpenters and owners. There are, however, many existing buildings where these desirable conditions are not found, and it is here that the greatest good and the most profit can be secured. In well-equipped kitchens, hoods are placed over the range to gather the steam and odors and carry them off. The use of such hoods only needs to be explained to secure a profitable trade. Sometimes the regular smoke flue cannot be used for a vent flue, and then a sheet iron flue with ventilating hood will serve the purpose. Such equipment will exhaust the odors and carry off the fuel air and surplus heat and will lead to the need of some fresh air being brought into the kitchen without the chilling effect of opening a window in winter. This should be a simple detail, readily supplied where there is a constant fire, as in a cooking stove, by constructing a flue to bring the fresh air to the stove in such a way that it will be heated before it is discharged into the kitchen. Here is a field that the bright, capable man can exploit with profit to himself and benefit to his customers.

INDUSTRIAL GOSSIP

THE Mount Forest Manufacturing Co., Limited, Mount Forest, Ont., recently incorporated for the manufacture of picture mouldings, frames, etc., commenced operations last week.

The Toronto and Mimico Electric Railway is to be extended from Mimico to Oakville at once. The right of way has been secured.

The Toronto Suburban Railway will apply to extend its line from some point on its Davenport Road branch easterly to some point in East Toronto or Little York.

Meaford, Ont., has passed a by-law to exempt from taxation for ten years The Charles Barber Foundry Co., and a by-law to loan The Oshawa Canning Co. $10,000.

The Niagara Falls Power Company will use redwood timber instead of steel for their big tunnel. They are now receiving bids for 3,000,000 feet of this timber from California.

The Toronto Junction Cement Brick Co. intend erecting a building 140 x 65 ft. for the manufacture of cement bricks and window sills, which are being much used for building purposes now.

The St. John, N.B., Iron Works held their annual meeting on Wednesday, last week, when a satisfactory dividend was declared. John E. Moore is president, and Charles McDonald, managing director of the company.

It is expected that the Berlin-Preston Railway line will be in a position to handle freight in a few weeks. This will give Berlin a connection with the C.P.R. and make it a competing point in transportation matters.

The name of The Ontario Farmers' Cordage Co. has recently been changed to The Brantford Cordage Co., Limited. This company manufactures binder twine under the brands "Gold Leaf," "Silver Leaf" and "Maple Leaf."

A 250 ton boat is being built of wood at the canal basin at Ottawa. When completed this boat will be used by The Ottawa Forwarding Co. on the Ottawa-Montreal route. This is the first boat of any size built in Ottawa in four years.

A company wants incorporation and power to build an electric railway from Stratford, Ont., through Sebringville to Mitchell; from Stratford to St. Mary's; also to Embro on the C.P.R.

The material is on the ground for The Mount Forest, Ont., Carriage Company's new building, which is to be four storeys high and 250 x 60 ft. in size, exclusive of boiler-room and dry kiln. The erection of the building will start as early as possible in the spring.

The incorporation is announced of The Dominion Linen Mills, Limited, with head offices in Toronto. The capital is $250,000, and the provisional directors are as follows: Charles McEachren, W. B. Hill, George Stevenson, Alexander A. Hood, Diby Grimson, all of Toronto.

A scheme is under way to establish a binder-twine factory in Holstein, Ont., says The Owen Sound Times. A provisional board of directors has been appointed, and efforts are being made to secure a sufficient amount of stock to establish the business on a good financial basis.

The city of Ottawa will seek from the Ontario Legislature authority to build, equip and operate a street railway through the city and the adjoining municipalities, and to acquire by purchase or expropriation existing lines; also permission to spend $24,850 to purchase a site and furnishing a free library.

At its next session the Ontario Legislature will be asked to confirm an agreement between the Hamilton Electric Light and Cataract Power Company and The Hamilton Cataract Power, Light and Traction Co., providing for the transfer of the undertaking and assets of the former company to the latter company.

MINING OPERATIONS IN ONTARIO.

W. E. H. Carter, secretary of the Ontario Bureau of Mines, who is inspecting some of the mineral districts of Ontario, reports that The Graphite Company at Calabogie are now turning out refined graphite. Formerly they shipped the crude graphite to the United States for refining. Mr. Carter reports that the felspar industry is making good progress. It was very difficult to get a market in the United States at first, because the potteries making use of it own their own deposits and try to keep the Canadian article out of the market. This, however, has been overcome, and now four other felspar properties have been put in operation, and are all producing at the present time. Felspar is used largely in the manufacture of pottery, glass, carborundum, etc. It has to be ground in the United States.

The Canada Corundum Company are getting ready to enlarge their plant. They will construct a plant sufficient for turning out 200 tons a day. At present their output is about 20 tons. There is a $10,000,000 combine in corundum in the United States, but they are unable to hurt the Canadian trade, as our product is superior to theirs.

NEW CANADIAN CANAL.

It is announced says The Marine Review, that work is to begin in the spring on a canal connecting the Richelieu River at St. Johns with the St. Lawrence opposite the city of Montreal. It is to be pushed vigorously and will be completed within two years as it is a short cut and involves the investment of about $5,250,000. The charter provides that the canal shall not have a depth of less than 9 ft. and a width of not less than 80 ft. at the bottom. As a matter of fact, it will have immediately a depth of 14 ft., corresponding with that of the St. Lawrence canals. Its length is 18¼ miles. The present connection between Lake Champlain and the St. Lawrence is by the Richelieu River, which is its outlet, and the Chambly canal, the oldest of the Canadian artificial waterways.

The Chambly canal reaches the St. Lawrence at Sorel, 45 miles below Montreal and is a 7-ft. waterway, with locks 18 ft. wide. It was built when the seaport to which access was desired was Quebec. It makes the route to the St. Lawrence 105 miles long. This distance to free river navigation is reduced 83 miles by the proposed canal from St. Johns to Montreal. Arrangements are made in the plans to increase the depth of the Lake Champlain and St. Lawrence ship canal to 21 ft., when the Georgian Bay canal is built, as it will really be an extension of that canal to Lake Champlain and through that lake and the old Champlain canal connecting Whitehall and Troy, to the Hudson River and New York.

It is expected that the completion of this canal will have the effect of bringing to American ports some part, at least, of the traffic which will be concentrated at Montreal by the system of Canadian artificial waterways. The St. Lawrence route to the sea is not attractive from the point of view of the marine underwriters, and the economy of shipments by way of New York is appreciated.

THE [illegible] Royal Color and Varnish Company, of Montreal, has been incorporated.

E. C. Desaulniers, general merchant, of [illegible]ville, Que., has assigned.

E. A. D. Landriault, general merchant, Hawkesbury, Ont., has assigned.

A. Laroche, general merchant, St. Arm and Station, Que., has compromised.

Elzear Belleau, tinsmith and general merchant, St. Vubert, Que., has assigned.

Ed. Germain, general merchant, of St. Bazile, Que., has effected a compromise.

J. R. Deschambault, general merchant, Terrebonne, Que., is offering 50c. on the dollar.

W. F. Frost, general merchant, Pubnico Head, N.S., has assigned to E. H. Armstrong.

A. A. Choquette, general merchant, of Rapid River, Ont., has assigned to How and Barnes.

The assets of the hardware stock of E. H. Lafreniere, Montreal, were sold on February 18.

A. Vermette, general merchant, of St. Scholastique, Que., has compromised at 50c. on the dollar.

James H. Warner, carriagemaker, of East Zorra, Ont., has made an assignment to M. M. Tisdale.

J. Bruyere & Fils, general merchants, of Ottawa and Embrem, are offering to compromise at 25c. on the dollar.

A meeting of the creditors of J. U. St. Armand, general merchant, St. Genevieve de Batiscan, Que., was held on February 13.

Lambert & Fils, builders, of Montreaf, have made an assignment, and a meeting of their creditors will be held on February 24.

T. E. Copeland, hardware merchant, of Winnipeg, assigned to C. H. Newton, and a meeting of his creditors was held on February 20.

William Bone, painter, Hintonburg, Ont., has assigned to W. A. Cole, and a meeting of his creditors will be held on February 21.

H. U. Mockler, general merchant, of Durham, Ont., has made an assignment to Richard Lee, and a meeting of his creditors will be held on February 23.

H. Lamarre is curator for J. U. St. Armand, general merchant, St. Genevieve de Batiscan, Que.; the assets will be sold on February 19.

INCORPORATIONS AND CHANGES.

The Point Edward Elevator Company, Limited, have obtained a charter.

The Merritt Bros. Co., Limited, of St. John, N.B., have been incorporated.

Putan & Fitzpatrick, Birtle, Man., general merchants, have removed to Swan Lake.

The Northwest Thresher Insurance Co., Winnipeg, Man., are applying for incorporation.

The Mathie Ellis Co., coal and builders' supplies, Quebec, have applied for a charter.

Burke & Shearer, agricultural implement agents, Gainsboro, have dissolved, and E. Burke continues.

A. F. Murray & Co., contractors, etc., Montreal, have dissolved, and a new partnership has been registered.

John G. Clarke & Son, hardware and stove merchants, of Berwick, N.S., have registered a co-partnership of John C. Clarke and Ralph N. Clarke.

Sylvester Nichols, carriagemaker and blacksmith, Aylesford, N.S., has registered consent for his wife, Francis Nichols, to do business in her own name.

SALES MADE AND PENDING.

F. A. Thompson, Buckingham, Que., has sold out his general stock.

Overend & Son have succeeded to the general business of James Overend, Minette.

The general store of A. E. French, Minnedosa, N.S., has been sold to Campbell Bros.

D. D. Wigle, Amherstburg, Ont., has sold his stock of hardware to Melvin Wigle.

P. A. Scott, Fleming, has sold his stock of agricultural implements to Robt. Holmes.

George Trott, hardware merchant, of Bothwell, Ont., has sold out to J. Puddicombe, jr.

The general merchandise of the estate of Joseph Monkhouse, Altona, is advertised for sale by tender.

The general stock of the estate of T. Armstrong & Bros., has been sold to J. F. Snell at 87c. on the dollar.

J. S. Watson, grist miller and general merchant, Packingham, Ont., has disposed of the general stock of his business.

B. Sherrin & Son, hardware and furnishing merchants, Preston, are reported to have sold out to D. J. Finnerton.

The general stock of the estate of F. J. Mayhew, Thamesville, Ont., has been sold at 47c. on the dollar to J. U. Smith.

J. J. Heaslip, Alameda, has sold out the hardware department of his hardware, implement and grain business to Beach & Devell.

PARTNERSHIPS FORMED AND DISSOLVED.

Walker & Davey, general merchants, of Enterprise, Ont., are dissolving partnership.

Nadeau & Gauthier, general mercnants, Farnham, Que., have dissolved partnership.

FIRES.

The general stock of W. R. Horner, of Granby, Que., was damaged by smoke and removal: insured.

The stock of William Topp, tinsmith, of Granby, Que., was damaged by water and removal; insured.

J. Mullin, Son & Co., Granby, Que., had their general stock damaged by smoke and removal; insured.

DEATHS.

J. Bean, general merchant, Galetta, Ont., is dead.

George R. Bruce, builder, of Guelph, Ont., is dead.

S. J. Smith, of the hardware firm of Smith & Pethick, Wingham, Ont., is dead.

T. W. Robertson, of The High River Trading Co., general merchants, High River, is dead.

IMPLEMENT DEALERS IN MANITOBA

ONE of the most interesting gatherings of the past week was that of the Retail Implement Dealers' Association. The attendance was not so large as The attendance was not so large as last last year, but was more representative. In all four sessions were held, the final one on Thursday evening being addressed by W. S. Thomas, president of the National Association of Implement Dealers, who has come at his own expense to attend the meeting. His address was considered of great value to the trade. The concluding paragraph is an illustration of the practical character of the whole: "Now let us learn by heart, and let it hereafter be said of all of us, as was recently said of one of the successful co-operative societies: 'The great secret of their success so far has been their ability to stick together. They have all such confidence in their organization and confidence in each other, that they are perfectly honest and honorable with each other.' That tells the whole story."

It was decided to hold the next annual meeting at Brandon. The officers elected for the current year were:

President—A. Mack, Carberry.
Vice-President—J. C. Nelson, Brandon.
Secretary—W. J. Helliwell, Oak Lake.
Directors — John Crawford, Neepawa; John Menzies, W. J. May, Portage la Prairie; D. McDonald, Virden; W. Williams, Gladstone; T. J. Agnew, Prince Albert; F. Chapin, Hartney; Jas. Winram, Pilot Mound.
Auditors—J. Inglis, Brandon, and D. Sheriff, Brandon.

Among those present from outside points were: A. Mack, Carberry; W. J. Helliwell, Oak Lake; J. E. Menzies, Minnedosa; Thos. Bellamy, Edmonton; Jas. Winram, Pilot Mound; D. A. Macdonald, Regina; T. J. Noble, Carman; Chas. Wahn, Gretna; J. Avery, Austin; Isaac Moore, Cypress River; John Crawford, Neepawa; D. McDonald, Virden; M. Craig, J. C. Nelson, Brandon; George Booth, Macgregor; W. Shoultz, Macgregor; A. E. Cameron, Melita; W. J. May, Portage la Prairie; T. J. Agnew, Prince Albert; W. Williams, Gladstone; R. Langtry, Virden.

At the conclusion of the Thursday evening meeting the whole Association adjourned to the new building of The Cockshutt Plow Company on the corner of Princess and Pacific avenue. Here a splendid spread was served by Mrs. Hample, and after everyone had satisfied the cravings of the inner man, the company repaired to the second floor of the great building, where a very delightful vaudeville performance was given for their entertainment.

The general store business of Humphreys & Trites Co., Limited, Petitcodiac, N.B., has been sold to The Sussex Mercantile Co., Limited.

ZEAL FOR CANADIAN PRODUCTS.

By a United States Citizen, but now a resident of this Country

NOT in the sense that we should exclude people from other countries from coming here, on the contrary, we think they should be invited and urged to come and bring their money with them, for the reason that Canada is a good place to live in, and Canadian enterprises are safe to invest in.

The term "Canadian productions for Canadians" would, perhaps, fit the case better, and in this connection it would not be out of place to say a few words.

It is a too common error of both the business men and the people generally in this fair land of ours, if not to belittle the products of our own manufacture, to at least praise up importations from other countries, speaking in such high terms as to give a newcomer or stranger the impression that it is for other countries to lead, and for Canada to follow; and that even in doing the following Canada is many years behind in the production of novelties, and things generally that are desirable and convenient for the use of our citizens. Especially does this apply to our neighbor "on the other side," as we say when speaking about the domain of the indomitable Yankee.

A short time ago the writer wanted an article in the furniture line. Went into one of the big stores in Toronto and was shown the stock, but the article having the particular feature wanted was not there. The clerk said that kind was not made in Canada, that he had never seen one, etc. I remarked that it was in general use on the other side, and carried in stock by dealers in his line. By way of explanation he said that the manufacturers of this country were not up-to-date, and that there was not demand enough for such goods to warrant the making of them. "Besides," he said, "We don't have skilled labor here. All the young men who have ingenuity, and can do that class of work, go to the other side because they can get better wages, etc."

In another store I was shown some goods, and the first thing the clerk said was "These are from the other side." I inquired if he thought them any better for that, and he replied:

"No, but when you want anything novel, you have to go over there to get it."

One more instance was that of an old-established hardware dealer in a small town in Ontario, when speaking of foreign-made articles in comparison with our own. He said: "I don't care; it is just so, and I tell them so to their faces. When the manufacturers in this country make their goods as tasty and saleable as they do in the United States, we can sell them, but they don't do it."

Now, such talk is all wrong, even if it were true, but it is not. It is a pretty good rule to not say anything bad about a man even though his characteristics are such that you cannot say anything good of him. And the same rule can be made to apply when speaking of our country and its productions. It is well enough to adopt the methods of others when by doing so, there is no conflict or infringement of rights; but it is neither good policy nor horse sense to be always lauding and magnifying what others are doing, and speaking disparagingly of our own. Right here in our own country we have every facility for doing all that can be done anywhere in the world to make our people comfortable and happy; and love of country should prompt a man to say the best he can about the land of his birth or adopton. If he feels like expressing himself otherwise, he would better say nothing, leaving those with whom he converses to find out by their own experience as to what the facts are. Ten to one, if they come from a people who are truly loyal and bring their loyalty with them, you will not find them complaining, but hustling to bring about a better condition of things, if need be.

Patriotism is what is most needed, and as we believe that there is an all-wise and and over-ruling Providence, so let us believe that this fair land of ours is "God's country," and that we are here for no other purpose than to improve both the country and the conditions of our people. This can in a measure be accomplished by always speaking as if we thought and felt that our country, her people, and her institutions are the best on earth.

ONE WHO OBSERVES.

INQUIRIES ABOUT CANADIAN TRADE.

Inquiries received by the Canadian Section of the Imperial Institute, London, England:

1. A firm maunfacturing boots and shoes wish to hear from Canadian jobbers to take up sale of these goods.

2. A Scotch firm of produce brokers wish to secure the representation of a first-class Canadian manufacturer of flour.

3. A manufacturer of spun, steamed and cleaned horse hair desires names of Canadian importers of this material.

4. A London firm of produce brokers would be pleased to act for Canadian shippers of butter, eggs, bacon and similar lines. They possess a first-class connection.

[The names of the firms making the above inquiries can be obtained on application to the Editor of HARDWARE AND METAL.]

The agricultural implement business of J. T. Bell, Medicine Hat, N.W.T., has been sold to T. H. Rhodes.

APOLLO BEST BLOOM
GALVANIZED IRON

The metal-worker who uses common galvanized iron makes his business harder to do and harder to get; and, of course, his profits less.

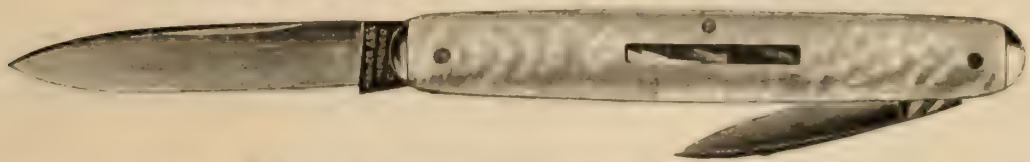
H. BOKER & CO'S "TREE" BRAND

Pen and Pocket Knives.



Exclusive variety of pattern and finish.

Also SCISSORS, SHEARS and RAZORS.

Retailers can readily double the cost on Boker's Cutlery.

For sale by all Leading Wholesale Hardware Houses.

CURRENT MARKET QUOTATIONS.

February 20, 1903.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.
